Take a stunning journey to the ends of the earth through the colorful, fluid motion of Photicular® technology. A phenomenon first seen in the bestsellers Safari and Ocean, Photicular technology uses sliding lenses and video imagery to display realistic living motion in the pages of a book. It's like a movie in your hand. Penguins waddle in their irresistibly happy way. A walrus lumbers across the snowy landscape. There's a polar bear with her lively cubs. A beluga whale, breaching. A team of sled dogs sprinting directly at the viewer. And the miracle of the Northern Lights, shimmering like a silk rainbow through the star-filled night. National Geographic writer Carol Kaufmann brings the reader along on a voyage to the North and South Poles, and writes a lively and informative essay for each image, including vital statistics for each animal, such as their size, range, habitat, and more.

As Peanuts reaches the mid-1980s, Charles Schulz is still creating and playing with new characters, and in this volume Snoopy's deadpan, droopy-mustached brother Spike takes center stage: Surrounded by coyotes in the desert where he lives and who are attacking him with rubber bands, he sends a frantic message to Snoopy who launches an expedition to save him. Then, he makes the long trek back to Snoopy's neck of the woods accompanied by his only friend (a cactus, of course)... and throughout the rest of the book, pops up in hilarious, Waiting for Godot-style vignettes set in his native Needles.

The timeless appeal of alphabet books meets the patented technology of Scanimation. A National Parenting Product Awards (NAPPA) winner! Scanimation is a state-of-the-art animation process that creates the illusion of movement in each picture. In terms kids can relate to, it's like a video without a screen. ABC Animals presents the alphabet as it's never been seen before. In a romping, stomping journey from A to Z, watch the Alligator snap, the Bats swooping, the Camel trot. There's L for the Lion proudly prowling along, and M for the Mouse scurrying inside his wheel. And it all culminates in the largest Scanimation image yet: Z, for Zoo, where all the animals gather to play. Each page is a marvel that brings animals, along with one shining star, to life with art that literally moves. It's impossible not to flip the page, and flip it again, and again, and again.

Santa Claus is going to town! Marrying the magic of Scanimation with the universally beloved figure of Santa Claus, Santa! is a holiday book unlike any other. It presents a Santa that readers have never seen before—acrobatic, playful, a little mischievous, filled with joyful energy. Here's Santa hula-hooping. Santa juggling. Santa doing cartwheels and Santa on a unicycle. Children, as they did with Gallop!, will want to imitate Santa's irresistibly happy motions. The grown-ups will be unable to stop smiling—it's hard to imagine a cooler character than this jolly St. Nick as he runs, spins, gyrates, backflips, and blows big bubbles. Scanimation is the technology behind the instant New York Times best-selling series that started with Gallop!, to most recently The Wizard of Oz. Author and inventor Rufus Butler Seder continues to refine the Scanimations, with ever more smooth-

flowing and detailed moving images—perfectly applied, in this case, to the irresistible figure of Santa Claus.

"As a peanutrician for the Talking Peanut kids, Dr. Peanut leads a joyful life. But danger looms when he enters the world of peanut-eating giants. Out there, Talking Peanuts need to watch their step. Disguised as an ant one afternoon, Dr. Peanut eludes a hungry squirrel only to be scooped up by two giant kids. After rejecting several doctorish arguments against eating peanuts, the amused children tell him not to worry; they don't eat anything that talks.
