How international relations theory can be applied to a zombie invasion What would happen to international politics if the dead rose from the grave and started to eat the living?
Daniel Drezner's groundbreaking book

answers the question that other international relations scholars have been too scared to ask. Addressing timely issues with analytical bite, Drezner looks at how well-known theories from international relations might be applied to a war with zombies. Exploring the plots of popular zombie films, songs, and books, *Theories of International Politics and Zombies* predicts realistic scenarios for the political stage in the face of a zombie threat and considers how valid—or

how rotten—such scenarios might be. With worldwide calamity feeling ever closer, this new apocalyptic edition includes updates throughout as well as a new chapter on postcolonial perspectives.

A ground-breaking book by the world-leading expert in sensory science: *Freakonomics for food*. Why do we consume 35% more food when eating with one more person, and 75% more when with

three? Why are 27% of drinks bought on aeroplanes tomato juice? How are chefs and companies planning to transform our dining experiences, and what can we learn from their cutting-edge insights to make memorable meals at home? These are just some of the ingredients of *Gastrophysics*, in which the pioneering Oxford professor Charles Spence shows how our senses link up in the most extraordinary ways, and reveals the importance of all the "off-the-plate"

elements of a meal: the weight of cutlery, the colour of the plate (his lab showed that red is associated with sweetness - we perceive salty popcorn as tasting sweet when served in a red bowl), the background music and much more. Whether dining alone or at a dinner party, on a plane or in front of the TV, he reveals how to understand what we're tasting and influence what others experience. Meal-times will genuinely never be the same again.

Coastal populations of shellfish have been exploited by humans for millennia as an easily accessible source of fresh protein. Unfortunately, because the intertidal zone and the shallow coastal margins are so intertwined with man's activities, these shellfish stocks are now severely threatened around the

world. Issues such as anthropogenic pollution, harmful algal blooms, overfishing, loss of habitat, and local stakeholder conflicts are all contributing to an alarming decline in the natural productivity of these regions. There have now been five International Conferences on Shellfish Restoration (ICSR) since 1996, which have focused the attention on transferring scientific knowledge into practical remedial and restorative actions for shellfish populations. This

volume represents a selection of contributions from the third meeting in Cork, Ireland, 1999. It includes papers on lobsters, sea urchins, whelks, clams, mussels, and scallops, with a thematic emphasis on ranching, disease, environmental interactions, fisheries management, aquaculture, restoration, toxic algal blooms, and toxicity testing. *National Library of Medicine Current Catalog* Princeton University Press Invaluable to students

and those approaching the subject for the first time, *An Introduction to International Relations, Second Edition* provides a comprehensive and stimulating introduction to international relations, its traditions and its changing nature in an era of globalisation. debates that shape this dynamic discipline and contemporary world politics. Now in full-colour and accompanied by a password-protected companion website featuring additional chapters and case studies, this is the indispensable guide to the study of international relations.
