The lush South American lowlands known as the Pampas have been the site of a tense tete-a-tete between the indigenous communities and the descendents of European settlers for centuries.

Gustave Aimard's Last of the Incas is set against this backdrop, and recounts a period during which the tensions between the two groups boiled over.

As Jay Gardiner drove down the village street behind his handsome pair of prancing bays, holding the ribbons skillfully over them, all the village maidens promenading up the village street or sitting in groups on the porches turned to look at him. He was certainly a handsome fellow; there was no denying that. He was tall, broad-shouldered, with a fair, handsome face, laughing blue eyes, a crisp, brown, curling mustache, and, what was better still, he was heir to two million of money. He was passing the summer at the fashionable little village of Lee, among the Berkshire Hills of Massachusetts. That did more to advertise the place than all the glowing newspaper items the proprietor of the Summerset House could have paid for. Every mother of a marriageable daughter who had heard of the millionaire managed to rake and scrape together enough money to pass the season at Lee. It was laughable to see how adroitly these mothers managed to secure an introduction, upon one pretext or another, to the handsome millionaire. Then the daughters were duly brought forward and presented. Everyone knew the story of Jay Gardiner. His lady-mother and elder sister lived in what was called the Castle, the grandest and most famous homestead by far in

Great Barrington.

To the scientists and philosophers of our time, Hegel has been either a neglected or a provocative thinker, a source of irrelevant dark metaphysics or of complex but insightful analysis. His influence upon the work of natural scientists has seemed minimal, in the main; and his stimulus to the nascent sciences of society and to psychology has seemed to be as often an obstacle as an encouragement. Nevertheless his philosophical analysis of knowledge and the knowing process, of concepts and their evolutionary formation, of rationality in its forms and histories, of the stages of empirical awareness and human practice, all set within his endless inquiries into cultural formations from the entire sweep of human experience, must, we believe, be confronted by anyone who wants to understand the scientific consciousness. Indeed, we may wish to situate the changing theories of nature, and of humankind in nature, within a philosophical account of men and women as social practitioners and as sensing, thinking, feeling centers of privacy; and then we will see the work of Hegel as a major effort to mediate between the purest of epistemological investigations and the most practical of the political and the religious. This book, long delayed to our deep regret, derives from a Symposium on Hegel and the Sciences which was sponsored jointly by the Hegel Society of America and the Boston University Center for Philosophy and History of Science a decade ago.

Collected together here are a collection of works revealing the philosophy of Socrates from his friend and contemporary Xenophon. In "The Memorabilia" Xenophon directly defends the charges against Socrates, which were largely religious, but also political, in nature. Subsequently a series of episodes in which Socrates converses is related revealing a remarkable glimpse into everyday Athenian life and the wisdom of Socrates' teachings. In "The Economist", Xenophon speaks of household organization and administration, again allowing readers to see Socrates' political philosophy and ancient Greek life from the author's perspective. "The Symposium" vibrantly relates a witty dinner party in which Socrates and the author were both in attendance, and where each person present defined their idea of virtue and pride. In "The Apology", the state of mind and defense of Socrates is related in detail at his trial and execution. Finally, in "Hiero," an extended dialogue between the absolute dictator of Syracuse and the poet Simonides is presented, in which they discuss how the private man has easier access to happiness than a tyrant. While many readers may be more familiar with Plato's writings on Socrates, this collection gives added insight into of ancient Greece's most important philosophers. This edition is printed on premium acid-free paper and follows the translations of H. G. Dakyns.

There was great rejoicing among the children in the farmhouse of Belle Prairie, one of the most flourishing farms in the beautiful part of Touraine where it was situated. To-morrow would be their mother's birthday, and for as long back as any of the small people could remember "mother's birthday" had always been a holiday. For it fell in June, the loveliest month of the year, and the fun began the day before, when, as soon as they were released from school, they, and some chosen ones among their companions, came racing down the village street on their way to what was still called the "château,"-although the house had long since disappeared-there, in the grounds now left to run wild, to gather to their hearts' content honey-suckle and roses, which had not always been "wild," bunches of forget-me-nots and trailing branches of ivy, with which to adorn the sitting-room at the farm which was considered peculiarly their mother's.

The serious threat of the underdeveloped areas of the Common Market, particularly southern Italy and certain regions of France, to European unity is considered and constructive means to alleviate this danger are presented. A careful analysis is made of the regional economies of the underdeveloped areas. In each case the forms of cooperation developing between these governments and the institutions of the European Economic Community are drawn, and an assessment is made of the jeopardy to the areas if proper action is not taken. The Price of Power CreateSpace

The dialectics of possibility and reality is an old philosophical theme. In contrast to empirical sciences that deal with reality, philosophy has sometimes been viewed as the science of the possible. That said, the modal concepts of possibility and necessity have proven to be ambiguous and recalcitrant to analysis, and their relation to the concept of reality remains problematic to the present day. From Aristotle to Russell, the belief that the "real" world by no means exhausts the "possible" worlds has attracted serious thought. This work brings together a group of experts who are intent on transcending the worn-out dichotomy between analytic and continental philosophy. This collection takes a fresh look at the metaphysics and logic of possibility and reality, and illuminates them from a great variety of perspectives. Topics include the history of philosophy (from Greek antiquity to David Lewis) as well as the semantics of possible worlds; logic, mathematics, and computer science as well as literature and the new media; forms of scientific as well as fictional discourse. The basic position taken by many contributors is a commonsensical one. In ordinary language we do not seem to have any problem in making statements about future possibilities without establishing definitive claims to their truth. In other words, one can speak of future contingencies without making claims for present-day truths. Moreover, the contributors hold that it seems quite feasible to talk of objective truth as a series of possibilities rather than empirical realities. All branches of philosophy seem to agree that to think about possibilities is an inclination of human nature. In short, the more we know about possibilities the better human beings and actions relate to reality. This is a serious effort that invokes a sense of intellectual history to explain issues that are vexing, but not insoluble. It will interest a variety of people from philosophers to social planners. Chiddingwick High Street is one of the quaintest and most picturesque bits of old town architecture to be found in England. Narrow at either end, it broadens suddenly near the middle, by a sweeping curve outward, just opposite the White Horse, where the weekly cattle-market is held, and where the timbered gable-ends cluster thickest round the ancient stone cross, now reduced as usual to a mere stump or relic. In addition to its High Street, Chiddingwick also possesses a Mayor, a Corporation, a town pump, an Early English church, a Baptist chapel, and abundant opportunities for alcoholic refreshment. The White Horse itself may boast, indeed, of being one of the most famous old coaching inns still remaining in our midst, in spite of railways. And by its big courtyard door, one bright morning in early spring, Mr. Edmund Plantagenet, ever bland and self-satisfied, stood sunning his portly person, and surveying the world of the little town as it unrolled itself in changeful panorama before him.
