The Relationship of Mental Ability, Reasoning Ability, and Reading Ability to School Achievement
 Arihant Publications India limited

The history of testing mental abilities has seen the dominance of two contrasting approaches, psychometrics and neuropsychology. These two traditions have different theories and methodologies, but overlap considerably in the tests they use. Historically, psychometrics has emphasized the primacy of a general factor, while neuropsychology has emphasized specific abilities that are dissociable. This issue about the nature of human mental abilities is important for many practical concerns. Questions such as gender, ethnic, and age-related differences in mental abilities are relatively easy to address if they are due to a single dominant trait. Presumably such a trait can be measured with any collection of complex cognitive tests. If there are many specific mental abilities, these would be much harder to measure and associated social issues would be

more difficult to resolve. The relative importance of general and specific abilities also has implications for educational practices. This book includes the diverse opinions of experts from several fields including psychometrics, neuropsychology, speech language and hearing, and applied psychology.

Semistandardization of Mental Ability Test for Children of Ages Five, Six, Seven and Eight
 Cambridge Scholars Publishing

An Investigation Of: 1. The Reasoning Methods and Reasoning Ability in Normal and Mentally Retarded Girls Disha Publications

There is a growing acknowledgement of the importance of integrating the study of reasoning with other areas of cognitive psychology. The purpose of this volume is to examine the extent to which we can further our understanding of reasoning by integrating findings, theories and paradigms in the field of memory. Reasoning as Memory consists of nine chapters that make explicit links between basic memory process, and reasoning and decision-making. The contributors address a number of key topics including: the relationship between semantic memory and reasoning the role

of expert memory in reasoning recognition memory and induction working memory and reasoning metamemory in reasoning. In addition, the chapters provide broad coverage of the field of thinking, and invite the intriguing question of how much there is left to explain in the field of reasoning when one has extracted the variance due to memory. This book will be of great interest to advanced undergraduates, postgraduates and researchers interested in reasoning or decision making, and to researchers interested in the role played in cognition by a variety of memory processes.

A Fast Track Course in MENTAL ABILITY Kalinjar Publications

General Intelligence Test & Mental Ability Test Disha Publications

"Arithmetic reasoning items are widely used in Air Force personnel selection tests because of their high reliability and validity for a wide range of performance criteria. With the objective of finding test items that measure the same abilities, but require less testing time, nine types of replacement items were tried out in combination with a set of arithmetic reasoning items. It was found that the best combination of new items does measure the same abilities, but with on saving in testing time. Statistical analysis of data for the new tests and Arithmetic Reasoning provides information about the mental skills employed in solving arithmetic reasoning problems. Further development is proposed for the test, Estimating Answers, which as most closely correlated with Arithmetic Reasoning." -- page iii.
