The book is premised upon a research initiative conducted in the Northern Metropolitan Region (NMR) in Melbourne, Australia - an area characterized by relative social and economic disadvantage, where radical reform has seen outstanding results. Bolstered by reference to the broader international experience, *Powerful Learning* describes in detail the 'inside out' perspective on school improvement, beginning with the central tenet that every student will reach their potential. Standards of literacy and numeracy are recognised as essential but equally so is the instilling of a desire to learn.

This open access book offers a timely guide to challenges and current practices to permanently plug and abandon hydrocarbon wells. With a focus on offshore North Sea, it analyzes the process of plug and abandonment of hydrocarbon wells through the establishment of permanent well barriers. It provides the reader with extensive knowledge on the type of barriers, their functioning and verification. It then discusses plug and abandonment methodologies, analyzing different types of permanent plugging materials. Last, it describes some tests for verifying the integrity and functionality of installed permanent barriers. The book offers a comprehensive reference guide to well plugging and abandonment (P&A) and well integrity testing. The book also presents new technologies that have been proposed to be used in plugging and abandoning of wells, which might be game-changing technologies, but they are still in laboratory or testing level. Given its scope, it addresses students and researchers in both academia and industry. It also provides information for engineers who work in petroleum industry and should be familiarized with P&A of hydrocarbon wells to reduce the time of P&A by considering it during well planning and construction.
