Forgotten Reformer traces criminal justice practice and reform developments in late nineteenth-century America through the life and career of Robert McClaughy, a leading reformer. As a warden of one of America's toughest prisons, as a chief of police of Chicago, as a superintendent of two different reformatories, and as one of the first wardens of the federal prison system, McClaughy developed and led a reform movement that resonates today. As a founding member of the reformatory movement that sought to "save" young first offenders, McClaughy advocated new sentencing structures, probation, parole, and rehabilitative regimes within new institutions for young first offenders called reformatories. McClaughy then successfully got these reformatory ideals placed into adult prisons. In addition, McClaughy became American's main advocate for a criminal identification method called the Bertillon system. He set up the first identification bureaus at the Illinois State Penitentiary, the Chicago police department, and the federal prison at Leavenworth, Kansas and these became models for others across the country. Finally, as a founding member of the National Association of Chiefs of Police (today the International Association of Chiefs of Police) and the National Prison Assocation (today American Corrections Association), McClaughy sought to professionalize police and prison administrators.

This book argues that the subjective evaluation of the product must give way to a descriptive and objective attempt to reveal the workings of the process (ie translating). Without such a shift,

translation theory will continue outside the mainstream of intellectual activity in human sciences and fail to take its rightful place as a major field in applied Linguistics.

The first edition of this comprehensive work quickly filled the need for an in-depth handbook on concrete construction engineering and technology. Living up to the standard set by its bestselling predecessor, this second edition of the Concrete Construction Engineering Handbook covers the entire range of issues pertaining to the construction

Concrete Construction Engineering Handbook John Wiley & Sons
 Fourteen years on from its last edition, Cable Supported Bridges: Concept and Design, Third Edition, has been significantly updated with new material and brand new imagery throughout. Since the appearance of the second edition, the focus on the dynamic response of cable supported bridges has increased, and this development is recognised with two new chapters, covering bridge aerodynamics and other dynamic topics such as pedestrian-induced vibrations and bridge monitoring. This book concentrates on the synthesis of cable supported bridges, suspension as well as cable stayed, covering both design and construction aspects. The emphasis is on the conceptual design phase where the main features of the bridge will be determined. Based on comparative analyses with relatively simple mathematical expressions, the different structural forms are quantified and preliminary optimization demonstrated. This provides a first estimate on dimensions of the main load carrying elements used in the detailed design phase. Key features:
 Describes evolution and trends within the design and construction of cable supported bridges
 Describes the response of structures to dynamic actions that have attracted growing attention in recent years
 Highlights features of the different structural components and their interaction in the entire structural system
 Presents simple mathematical expressions to give a first estimate on dimensions of the load carrying elements to be used in an initial computer input
 This comprehensive coverage of the design and construction of cable supported bridges provides an invaluable, tried and tested resource for academics and engineers.

Emphasizing the value of idiomatic and unconstrained language, this introductory textbook begins with an overview of the fundamental principles of translation. The rest of the chapters expand and illustrate these principles with examples from a wide range of languages--particularly Asian, African, and Amerindian languages. The author uses the recently established principles of text-linguistics in her explanations of the interplay of syntax,

semantics, and communicative force through stress and variations of word order in the composition of a text. She also presents a thorough treatment of collocations and the semantic distortions of literal translation. Annotation copyrighted by Book News, Inc., Portland, OR

The FASB Statements of Financial Accounting Concepts contains the full text of five of the six Statements of Financial Accounting Concepts issued to date. The existing concepts are intended to serve the public interest by setting the objectives, qualitative characteristics, and other concepts that guide selection of economic events to be recognized and measured for financial reporting. Unlike a Statement of Financial Accounting Standards, a Statement of Financial Accounting Concepts does not establish generally accepted Accounting Principles.

The Great Passage Routledge

This is a revised edition emphasising the fundamental concepts and applications of strength of materials while intending to develop students' analytical and problem-solving skills. 60% of the 1100 problems are new to this edition, providing plenty of material for self-study. New treatments are given to stresses in beams, plane stresses and energy methods. There is also a review chapter on centroids and moments of inertia in plane areas; explanations of analysis processes, including more motivation, within the worked examples.

In Other Words is the definitive coursebook for anyone studying translation. Assuming no knowledge of foreign languages, it offers both a practical and theoretical guide to translation studies, and provides an important foundation for training professional translators. Drawing on modern linguistic theory, this best-selling text provides a solid base to inform and guide the many key decisions trainee translators have to make. Each chapter offers an explanation of key concepts, identifies potential sources of translation difficulties related to those concepts, and illustrates various strategies for resolving these difficulties. Authentic examples of translated texts from a wide variety of languages are examined, and practical exercises and further reading are included at the end of each chapter. The second edition has been fully revised to reflect recent developments in the field and new features include: A new chapter that addresses issues of ethics and ideology, in response to increased pressures on translators and interpreters to demonstrate accountability and awareness of the social impact of their decisions. Examples and exercises from new genres such as audiovisual translation, scientific translation, oral interpreting, website translation, and news/media translation. New project-driven exercises designed to support MA dissertation

work Updated references and further reading. A companion website featuring further examples and tasks Written by Mona Baker, a leading international figure in the field, this key text is the essential coursebook for any student of translation studies.

Discourse and the Translator both incorporates and moves beyond previous studies of translation. Its logical and informative approach to the problems of translation ensures that it will be essential for all those who work with languages 'in contact'. Incorporating research in sociolinguistics, discourse studies, pragmatics and semiotics, the authors analyse the process and product of translation in their social contexts. Through this analysis, the book emphasises the importance of the translator as a mediator between cultures.

Completely revised to reflect the new ACI 318-08 Building Code

and International Building Code, IBC 2009, this popular book offers a unique approach to examining the design of prestressed concrete members in a logical, step-by-step trial and adjustment procedure. Integrates handy flow charts to help readers better understand the steps needed for design and analysis. Includes a revised chapter containing the latest ACI and AASHTO Provisions on the design of post-tensioned beam end anchorage blocks using the strut-and-tie approach in conformity with ACI 318-08 Code. Offers a new complete section with two extensive design examples using the strut-and-tie approach for the design of corbels and deep beams. Features an addition to the elastic method of design, with comprehensive design examples on LRFD and Standard AASHTO designs of bridge deck members for flexure, shear and torsion, conforming to the latest AASHTO specifications. Includes a revised chapter on slender columns, including a simplified load-contour biaxial bending method which is easier to apply in design, using moments rather than loads in the reciprocal approach. A useful construction reference for engineers.

An award-winning story of love, friendship, and the power of human connection. Kohei Araki believes that a dictionary is a boat to carry us across the sea of words. But after thirty-seven years of creating dictionaries, it's time for him to retire and find his replacement. He discovers a kindred spirit in Mitsuya Majime--a young, disheveled square peg with a penchant for collecting antiquarian books and a background in linguistics--whom he swipes from his company's sales department. Along with an energetic, if reluctant, new recruit and an elder linguistics scholar, Majime is tasked with a career-defining accomplishment: completing *The Great Passage*, a comprehensive 2,900-page tome of the Japanese language. On his journey, Majime discovers friendship, romance, and an incredible dedication to his work, inspired by the words that connect us all.
