munitions. Weapons expected to be in the Navy stockpile until 1965 are considered. Munition safety requirements and packaging, stowage and handling precautions, emergency and decontamination procedures, detection, and medical facilities are considered. It is concluded that

shipboard safety of CW munitions can be achieved if proper precautionary measures are adopted, and personnel are thoroughly indoctrinated in emergency procedures. Munition packaging is recommended for stowage safety and for handling protection.

The importance of international maritime labour law - both as a component of international maritime law, and in socio-political and economic terms - has been recognised by the IMO International Maritime Law Institute for a number of years. Indeed, the Institute has annually organised a course on maritime labour law with the participation of inter alia the International Maritime Organization, the International Labour Organization, the International Transport Workers'

Federation, and the German Shipowners' Association. It was therefore a great pleasure when the authors invited me to introduce their forthcoming monograph on Maritime Work Law Fundamentals: Responsible Shipowners Reliable Seafarers. As the title suggests, a fundamental challenge of this branch of international maritime law is to achieve a balance between the interests of the two main stakeholders. Institutionally, the effort to achieve this balance dates back a number of decades with its genesis mainly found in the work of the International Labour Organization. It has to be said that whilst this effort achieved great progress, it has led to a haphazard, plethora of legal instruments.

Klassenweise werden die generellen und speziellen Zusammenstauvorschriften mit anderen gefährlichen Gütern und Klassen (außer Klassen 1 und 7) aufgezeigt.
