 This book explores the Social and Solidarity Economy (SSE) in Latin America. It highlights the challenges and possibilities for the countries of this region, and analyzes the evolution of the Social Economy's processes in order to ascertain its implications and social dimensions. The text also deals with solidarity alternatives in the capital market and the emergencies that occur in order to humanize the capitalist system.

 With new momentum, the Brazilian black movement is working to bring attention to and change

the situation of structural racism in Brazil. Black consciousness advocates are challenging Afro-Brazilians to define themselves and politically organize around being black, and more Afro-Brazilians are increasingly doing so. Other segments of the Brazilian black movement are working to influence legislation and implement formal mechanisms that aim to promote racial equality, including Affirmative Action Racial Verification Committees. For advocates of these committees, one needs to be phenotypically black enough to be a more likely target of racism to qualify for Affirmative Action programs. Paradoxically, individuals are told to identify as black but only some people are considered black enough to benefit from these policies. Afro-Brazilians are presented with a whole range of identity choices, from how to classify oneself, to whether one votes for political candidates based on shared racial experiences. Between Brown and Black argues that Afro-Brazilian activists' continued exploration of blackness confronts anti-blackness while complicating understandings of what it means to be black. Blending linguistic and ethnographic accounts, this book raises complex questions about current black struggles in Brazil and beyond, including the black movements' political initiatives and antiracist agenda.

RCC Dams - Roller Compacted Concrete Dams Psychology Press

One of the highest priorities for human societies in the 21st century, under the challenges of predicted great environmental changes, is to conserve all kinds of biodiversity across the planet. Among all the biota that exist on Earth, forest ecosystems demonstrate a high degree of biodiversity, being thought to comprise the most diverse ecosystems, as most of the terrestrial species in the world dwell in these ecosystems. Forest biodiversity is interlinked to a web of socio-economic factors, providing an array of goods and services that range from timber and non-timber forest resources to mitigating climate change and conservation of genetic resources; therefore, it is innately linked to ecosystems and human well-being. However, in recent decades, the decrease in forest biodiversity has been a crucial and ongoing environmental issue that needs special attention and adapted ecosystem management. This Special Issue book on forest biodiversity (FB) includes a selected number of research works from all over the world dealing with emerging issues, for understanding FB and its needs for conservation, ecological processes, disturbances, climate change and ecosystems resilience, structural complexity and ecosystem functions, ecological theories and silvicultural practices, and ecosystems stability. More specifically, it includes papers focused on the indicators and methods for assessing and monitoring forest

biodiversity, evaluation of practices, planting and silvicultural treatments, and management and monitoring methods, with an overall goal to provide new insights on forest biodiversity conservation, conservation of forest biodiversity in protected areas, treatments of endangered or threatened forest habitats, and sustainable management of forest resources.

Biodiversity, Ecosystems, and Conservation in Northern Mexico Rutgers University Press This book constitutes the proceedings of the 6th International Conference on Applied Informatics, ICAI 2023, which took place in Guayaquil, Ecuador, in October 2023. The 30 papers presented in this volume were carefully reviewed and selected from 132 submissions. The contributions are divided into the following thematic blocks: Artificial Intelligence; Data Analysis; Decision Systems; Enterprise Information Systems Applications; Geoinformatics; Health Care Information Systems; Interdisciplinary Information Studies; Learning Management Systems; Virtual and Augmented Reality.

The present volume of the Native Races of the Pacific States treats of monumental archæology, and is intended to present a detailed description of all material relics of the past discovered within the territory under consideration. Two chapters, however, are devoted to a more general view of remains outside the limits of this territory—those of South America and of the eastern United States—has being illustrative of, and of inseparable interest in connection with, my subject proper. Since monumental remains in the western continent without the broad limits thus included are comparatively few and unimportant, I may without exaggeration, if the execution of the work be in any degree commensurate with its aim, claim for this treatise a place among the most complete ever published on American antiquities as a whole. Indeed, Mr Baldwin's most excellent little book on Ancient America is the only comprehensive work treating of this subject now before the public. As a popular treatise, compressing within a small duodecimo volume the whole subject of archæology, including, besides material relics, tradition, and speculation concerning origin and history as well, this book cannot be too highly praised; I propose, however, by devoting a large octavo volume to one half or less of Mr Baldwin's subject-matter, to add at least encyclopedic value to this division of my work. There are some departments of the present subject in which I can hardly hope to improve upon or even to equal descriptions already extant. Such are the ruins of Yucatan, Guatemala, and Nicaragua, so ably treated by Messrs Stephens, Catherwood, and Squier. Indeed, not a few relics of great importance are known to the world only through the pen or pencil of one or another of these gentlemen, in which cases I am forced to draw somewhat largely upon the result of their investigations. Yet even within the territory mentioned, concerning Uxmal and Chichen Itza we have most valuable details in the works of M. M. Waldeck and Charnay; at Quirigua, Dr Scherzer's labors are no less satisfactory than those of Mr Catherwood; and Mr Squier's careful observations in Nicaragua are supplemented, to the advantage of the antiquarian public, by the scarcely less extensive investigations of Mr Boyle. In the case of Palenque, in some respects the most remarkable American ruin, we have, besides the exhaustive delineations of Waldeck and Stephens, several others scarcely less satisfactory or interesting from the pens of competent observers; and in a large majority of instances each locality, if not each separate relic, has been described from personal examination by several parties, each noting some particulars by the others neglected.É

This title is part of UC Press's Voices Revived program, which commemorates University of California Press's mission to seek out and cultivate the brightest minds and give them voice, reach, and impact. Drawing on a backlist dating to 1893, Voices Revived makes high-quality, peer-

reviewed scholarship accessible once again using print-on-demand technology. This title was originally published in 1981.

Sailing Directions, (Enroute), Caribbean Sea, Publication 148, 1998 New York : D. McKay This book draws together a series of studies of spit geomorphology and temporal evolution from around the world. The volume offers some unique insights into how these landforms are examined scientifically and how we as humans impact them, offering a global perspective on spit genesis and evolution. Spits are unique natural environments whose evolution is linked to the adjacent coast and near shore morphology, sediment supply, coastal dynamics and sea-level change. Over the past century, Global Mean Sea Level (GMSL) has risen by 10 to 20 centimetres and many coastal spits represent the first sentinel against coastal submersion. Scientific research indicates that sea levels worldwide have been rising at a rate of 3.5 millimetres per year since the early 1990s, roughly twice the average speed of the preceding 80 years. This trend, linked to global warming will undoubtedly cause major changes in spit morphology. Spits are highly mobile coastal landforms that respond rapidly to environmental change. They therefore represent a signature of past environmental change and provide a landform indicator of climate change.

Through a series of case studies from the mid-eighteenth century to the start of the twenty-first, this collection of essays considers the historical insights that ethno/auto/biographical investigations into the lives of individuals, groups and interiors can offer design and architectural historians. Established scholars and emerging researchers shed light on the methodological issues that arise from the use of these sources to explore the history of the interior as a site in which everyday life is experienced and performed, and the ways in which contemporary architects and interior designers draw on personal and collective histories in their practice. Historians and theorists working within a range of disciplinary contexts and historiographical traditions are turning to biography as means of exploring and accounting for social, cultural and material change - and this volume reflects that turn, representing the fields of architectural and design history, social history, literary history, creative writing and design practice. Topics include masters and servants in eighteenth-century English kitchens; the lost interiors of Oscar Wilde's 'House Beautiful'; Elsa Schiaparelli's Surrealist spaces; Jean Genet, outlaws, and the interiors of marginality; and architect Lina Bo Bardi's 'Glass House', S?Paulo, Brazil.

This book seeks to provide an alternative post-Western perspective to the history of contemporary architecture. It puts forward detailed critical analyses of various areas of the world, including Europe, Latin America, Africa, China, Australia, India and Japan, where particular movements of architecture have developed as active 'political acts'. The authors focus on a broad spectrum of countries, architectures and architects that have developed a design approach closely linked to the building context. The concept of context is broad and includes various economic, social, cultural, political and natural aspects. In all cases, the architects selected in this book have chosen to view context as an opportunity. However, each architect has considered certain specific aspects of context: some have been very attentive to the social context, others to material aspects or typological issues, and still others to aspects related to political visions or economic factors. The analysis critically highlights interesting, creative and respectful design approaches towards local conditions, such as sustainability in Nordic Europe, climate-conscious design in Africa, and the

'bottom-up' sensitivity of India. The book's main aim is to retrace, through both theoretical arguments and case studies, the debate that focuses on politics and the environment. Thanks to its valuable examples, this book strives to make a conscious contribution to establishing a bulwark against the current 'flattening-out' processes that architecture is experiencing. This book will be of relevance to researchers, teachers and students interested in the history of architecture, architecture and planning, and postcolonial studies.

Describes the construction of a canoe as the Indians used to do it and discusses the distinctive features of the craft of various tribes.

Applied Informatics Cambridge Scholars Publishing

A book of broad interest to professionals, dam engineers and managers, and to organizations responsible for dam development and management, RCC Dams offers a topical account of the design and operation of roller compacted concrete dams, describing the latest developments and innovative technologies in the field. The book considers planning and design, materials and construction, as well as the operation and performance of RCC dams.

The Boy's Own Magazine Springer Nature

This book is the result of a long movement of ideas and practices between Brazil and Germany. It brings together different research methodologies (discourse analysis, case studies, cross-cultural comparison, and action and practice- research) and studies innovative theoretical approaches and childhood-related practices that question present power relations and open up new ways of dealing with emerging phenomena in the fields of school and educational policy as well as in home-rearing, therapeutic, and community practices. A series of critical case-studies and examples of radically innovative educational, media and therapeutic practices and community-based interventions are presented, all of which demonstrate the transformative powers of collective subjectivities in the making of the history of childhood and youth and of society in general. The studies presented in this volume also illustrate the role cultural-historical and qualitative childhood research may play in this "making of history". With an introduction by M. Kontopodis and chapters by: I. Behnken, M. Benites, F. Camerini, M. Damiani, B. Fichtner, F. Liberali, A. Lopes, M. Mascia, I. S. Soares, H. Winkler, and W. Wörster.

Foreign Commerce Weekly BoD – Books on Demand

This book is a good basic guide to the polymers that are used in the construction industry. The types of polymers that can be used are discussed and specific applications are also covered. There is also a very comprehensive section on the health and safety aspects of using polymers in buildings.

[Bibliographie Internationale D'anthropologie](#) Routledge

This book describes the biodiversity and biogeography of northern Mexico, documents the biological importance of regional ecosystems and the impacts of human land use on the conservation status of plants and wildlife. It should become the standard source document for the conservation status of species and ecosystems in this region, which is of unusual biological interest because of its high biodiversity and highly varied landscape and biological zonation.
