Acute Care Handbook for Physical Therapists Elsevier Health Sciences

This book represents the first interdisciplinary text on the emerging field of rehabilitative surgery, in which state of the art procedures from multiple surgical specialties are combined. It proposes a completely new framework for understanding, coordinating, and providing treatment for paralyzed or severely neurologically impaired patients and explains the potentially critical impact of surgery in creating a new baseline of functional status, thereby improving the patient's daily life. Every major aspect of reconstructive surgical treatment is considered, including anesthesia, orthopedic surgery, plastic surgery, neurosurgery, general surgery, vascular surgery, and otolaryngology. The most up-to-date and evidence-based surgeries are clearly described and evaluated, with coverage of treatment of pressure sores, placement of feeding tubes, and upper extremity interventions to improve function and hygiene. Cutting-edge protocols are presented for the surgical treatment of severe nerve injuries, spinal cord injuries, and stroke or cerebrovascular accidents, and a first description and evaluation of phrenic nerve repair to assist weaning of paralyzed patients from ventilators is provided. Both surgical and nonsurgical readers will find this book to be an ideal guide and reference.

Gain an understanding of diseases and disorders to effectively assist the Physical Therapist! Goodman and Fuller's Pathology for the Physical

Therapist Assistant, 3rd Edition provides a solid background in pathology concepts and how they affect the role of the PTA in client rehabilitation. With an easy-to-read approach, chapters define each disease or systemic disorder, then describe appropriate physical therapy assessments plus guidelines, precautions, and contraindications for interventions. Case studies show how treatment ideas may be applied in everyday practice. From PTA educator Charlene M. Marshall, this market-leading pathology text provides the practical tools required to treat patients knowledgeably and effectively. It also includes a fully searchable eBook version with each print purchase. Concise information on disease processes and systemic disorders provides a background in the underlying pathology of diseases, helping PTAs to ask their patients appropriate questions and to adapt therapeutic exercise programs. Easy-to-follow format is organized to first define each disorder, followed by sections on clinical manifestations and medical management. Chapter objectives, outlines, and vocab builders at the beginning of each chapter introduce the topics and terminology to be presented. Medical Management sections address diagnosis, treatment, and prognosis for each condition discussed. Focus on the Physical Therapist Assistant's role provides the PTA with specific guidelines to the rehabilitation process for patients with diseases and disorders. Special Implications for the PTA sections allow students to easily reference information on working with patients with specific diseases or pathologic conditions. Nearly 800 drawings and photos reinforce student understanding of diseases, conditions, and general pathology principles. Standardized terminology and language is consistent with the Guide to Physical Therapy Practice, familiarizing readers with the standard terminology used in PT practice. Abundance of tables and boxes summarize important points, making it easy to access key information. E-chapters add supplemental information on behavioral and environmental factors, the gastrointestinal system, the reproductive system, lab tests and values, and more. NEW! Updated and

revised content throughout provides students with the current information they need to be effective clinicians. NEW! Clinical Pharmacology Spotlight provides an easy-reference summary of the basic pharmacology information for each pathology. NEW! eBook version is included with print purchase. The eBook allows students to access all of the text, figures, and references, with the ability to search, customize content, make notes and highlights, and have content read aloud.

The first of its kind, *Tracheostomy and Ventilator Dependence in Adults and Children: Learning Through Case Studies* provides clinicians, educators, and students in the fields of speech pathology, otolaryngology, nursing, and respiratory care with detailed descriptions of real-world interventions and treatment strategies. A wide variety of tracheostomy and ventilator dependency cases are presented, including congenital, acquired, and progressive illnesses; surgical cases; and COVID-19 pandemic case studies. The case studies also address both pediatrics and adults in many settings, such as outpatient, inpatient acute care and rehabilitation, ICU, and home care. Written in an engaging tone that focuses on the humans behind the diagnoses, the case studies offer a holistic approach that integrates what is known about physiology and treatment methods into the context of actual patients and their lives. Heterogeneous, ever-changing, and highly complex, this patient population requires skillful and innovative approaches across disciplines. Readers may use this inspiring and educational text as a resource, selecting a case that is similar to one they are facing or may face in the future, which may ultimately help them navigate speech, phonation, vent weaning, and swallowing objectives for their own patients. Each case has a title indicating the primary diagnosis so that readers may easily choose cases that are relevant to their clinical practice or educational objectives.

Sourced from speech pathologists, respiratory therapists, nurses, and physicians from around the world, the well-rounded clinical perspectives in these challenging and thought-provoking case studies will facilitate learning and enhance the knowledge of health care professionals, thus helping to improve the care and outcomes of pediatric and adult patients with tracheostomy or ventilator dependence. The book may also be used to supplement academic coursework for health care professionals in fields such as medical speech-language pathology by providing real-world examples of patient care for problem-based learning. Key Features: * Full-color clinical photographs featuring patients and interventions * Background information related to the specific issue and physiologic underpinnings * Case history of the patient, including the environment where treated * The problem to be solved or goal to be achieved * The decisions that led to the plan, treatment, or intervention * The logic, physiologic basis, or research behind the treatment/intervention strategies * Peer-reviewed references

With other texts written at either too high or too low a level, this book meets the needs of PTA students for usable, understandable pathology related to clinical application. Extensively illustrated, this book allows students to more easily comprehend and maintain interest in otherwise complicated pathological processes. The fourteen chapter format effectively fits within a chapter per week course structure, or each chapter may be used as a stand alone module within any course.

This classic text is the third edition of Frownfelter's CHEST PHYSICAL THERAPY AND PULMONARY REHABILITATION. This edition offers an enhanced scientific perspective with a strong editorial foundation and retains the readability and clear organization of previous editions. It is visually appealing with over 400 illustrations and a user-friendly format. each chapter includes a list of key terms and a set of review questions. A glossary follows the

text. In sync with the latest developments in cardiopulmonary physical therapy, the content is unified by the underlying theme of oxygen transport. *Fundamentals of Tests and Measures for the Physical Therapist Assistant* Elsevier Health Sciences

The fifth edition of this seminal textbook continues to provide those who are studying or are in practice with comprehensive evidence-based coverage of all the main aspects of respiratory and cardiac physiotherapy throughout the whole lifespan – neonates, infants, children, adolescents and adults – with the patient at centre and advocating a problem-based approach. For the new edition, Jennifer Pryor and Ammani Prasad hand the baton of editorship and their lasting legacy over to Eleanor Main and Linda Denehy. With a team of over 60 international expert authors, the new editors have incorporated major changes reflecting current cardiorespiratory physiotherapy education and practice. These changes are heralded by a new title – *Cardiorespiratory Physiotherapy: Adults and Paediatrics* (formerly *Physiotherapy for Respiratory and Cardiac Problems: Adults and Paediatrics*) – and a significant restructure of the content with a new set of chapters. A new key chapter on anatomy and physiology of the respiratory system lays the foundation which is then followed by a chapter on clinical assessment of adults, infants and children, and acutely ill or deteriorating patients.

Additional new content includes a chapter on outcome measurement in practice and a large chapter describing rehabilitation in acute and chronic conditions in special populations including spinal cord injury, oncology, trauma and paediatrics. The chapter on therapeutic interventions is comprehensive and reflective of evidence based practice. Integrates evidence with clinical practice Case studies used to facilitate problem solving Boxes throughout highlighting key issues and points Emphasizes the need for a holistic approach to patient care Bank of 350 images on Evolve Resources. Using a problem-solving approach based on clinical evidence, *Neurological Rehabilitation, 6th Edition* covers the therapeutic management of people with functional movement limitations and quality of life issues following a neurological event. It reviews basic theory and covers the latest screening and diagnostic tests, new treatments, and interventions commonly used in today's clinical practice. This edition includes the latest advances in neuroscience, adding new chapters on neuroimaging and clinical tools such as virtual reality, robotics, and gaming. Written by respected clinician and physical therapy expert Darcy Umphred, this classic neurology text provides problem-solving strategies that are key to individualized, effective care. UNIQUE! Emerging topics are covered in detail, including chapters such as Movement Development Across the Lifespan, Health and Wellness: The Beginning of the Paradigm, Documentation, and Cardiopulmonary Interactions. UNIQUE! A section on neurological problems accompanying specific system problems includes hot topics such as poor vision, pelvic floor dysfunction, and pain. A problem-solving approach helps you apply your knowledge to examinations, evaluations, prognoses, and intervention strategies. Evidence-based research sets up best practices, covering topics such as the theory of neurologic rehabilitation, screening and diagnostic tests, treatments and interventions, and the patient's psychosocial concerns Information. Case studies use real-world examples to promote problem-solving skills. Non-traditional approaches to neurological interventions in the Alternative and Complementary Therapies chapter include the movement approach, energy approach, and physical body system approaches therapies. Terminology adheres to the best practices of the APTA as well as other leading physical therapy organizations, following *The Guide to Physical Therapy Practice*, the Nagi model, and the ICF World Health Model of patient empowerment. Updated illustrations provide current visual references. NEW chapters on imaging and robotics have been added. Updated chapters incorporate the latest advances and the newest information in neuroscience and intervention strategies. Support the very best health, well-being, and quality of life for older adults! Here's the ideal resource for rehabilitation professionals who are working with or preparing to work with older adults! You'll find descriptions of the normal aging process, discussions of how health and social factors can impede your clients' ability to participate in regular activities, and step-by-step guidance on how to develop strategies for maximizing their well-being. *Neurologic Interventions for Physical Therapy* Elsevier Health Sciences

Trauma is a serious public health problem worldwide and is the leading cause of death among adults and children. Physiotherapists play a key role in the interdisciplinary team caring for patients with physical injury after a traumatic event. *Cardiopulmonary Physiotherapy in Trauma* offers valuable insight into the advanced trauma life support and acute care management of patients with trauma-related injuries, as well as physiotherapy treatment aims, intervention strategies and precautions to treatment. A variety of topics related to trauma are brought together in this practical volume, which shares information obtained from published research as well as the extensive clinical expertise of the authors. The dissemination of the authors' personal experience is key in cases where evidence to support the use of certain treatment techniques in patients with traumatic injury is still lacking. The book is thus an essential reference that encourages evidence-based practice for advanced undergraduate students, as well as graduate physiotherapists who work with trauma patients in the acute care setting. Contents: Physiological Response to Trauma (H van Aswegen)Not Just 'Small Adults': Paediatric Anatomy and Physiology in Relation to Trauma (B M Morrow)Trauma and Immunosuppressive Diseases (H van Aswegen and B M Morrow)Physiotherapy Modalities, Markers and Outcome Measures (B M Morrow and H van Aswegen)Blunt and Penetrating Injuries (H van Aswegen, B M Morrow and E van Aswegen)Burn Injuries (S Hanekom, M Wilson, B M Morrow and H van Aswegen)Multiple Orthopaedic Injuries (N Plani, H van Aswegen and B M Morrow)Spinal Cord Injury (W Mudzi, H van Aswegen and B M Morrow)Traumatic Brain Injury (R Roos, B M Morrow and H van Aswegen)Quality of Life of Survivors of Trauma (H van Aswegen) Readership: Physiotherapists who work in the acute care setting and manage adult and paediatric patients with traumatic injuries; Physiotherapy students studying towards Master of Science qualification (the topic is covered in the

final two years of u/g cardiopulmonary physiotherapy courses); Researchers with an interest in rehabilitation of patients with traumatic injury in the acute care setting or after discharge from acute care setting. Undergraduate physiotherapy students for subjects related to cardiopulmonary physiotherapy treatment techniques, physiotherapy in critical care, traumatology and orthopaedics, graduate nurses, doctors and allied health practitioners may gain a better understanding of the role of a physiotherapist, as a member of the interdisciplinary team in the acute care setting, in the management of patients with traumatic injuries. Key Features:Written by expert physiotherapists for physiotherapistsProvides more detailed information on the advanced trauma life support, surgical and intensive care unit management of patients with various types of traumatic injury compared with information found in other cardiopulmonary physiotherapy textbooksProvides evidence-based information on the physiotherapy management of both adult and paediatric patients with traumatic injury in the acute care settingExtensive pedagogical features make this text easily digestible and accessible for undergraduates and new practitioners on the go i.e., 'key message' boxes and clinical case scenariosExercise therapy strategies for the rehabilitation of patients with traumatic injury in the acute care setting and after hospital discharge are also providedThe only truly comprehensive & pedagogical textbook on the topicInternational market — should be the book recommended in the UK and abroad (editors are based in South Africa)Keywords:Trauma;Cardiopulmonary;Physiotherapy;Injury;Rehabilitation
