 Carl Friedrich Gauss's textbook, *Disquisitiones arithmeticae*, published in 1801 (Latin), remains to this day a true masterpiece of mathematical examination. .

This book offers an easy to read, all-embracing history of thermodynamics. It describes the long development of thermodynamics, from the misunderstood and misinterpreted to the conceptually simple and extremely useful theory that we know today. Coverage identifies not only the famous physicists who developed the field, but also engineers and scientists from other disciplines who helped in the development and spread of thermodynamics as well.

What is the place of Jews in medieval Christian societies? in the nineteenth and early twentieth centuries, this question was largely confined to Jewish scholars, and the academic debates where inseparable from the upheavels of the lives of contemporary European Jews.

 Since its publication, C.F. Gauss's *Disquisitiones Arithmeticae* (1801) has acquired an almost mythical reputation, standing as an ideal of exposition in notation, problems and methods; as a model of organisation and theory building; and as a source of

mathematical inspiration. Eighteen authors - mathematicians, historians, philosophers - have collaborated in this volume to assess the impact of the *Disquisitiones*, in the two centuries since its publication.

*Neusprachliche Mitteilungen aus Wissenschaft und Praxis* BRILL  
The present volume contains essays dealing with the Second Temple Jewish traditions and documents preserved solely in their Slavonic translations. It examines these Slavonic pseudepigraphical materials in the context of their mediating role in the development of early Jewish mystical traditions from Second Temple apocalypticism to Merkabah mysticism attested in rabbinic and Hekhalot materials. The book represents the first attempt to study Slavonic pseudepigrapha collectively as a unique group of texts that share common theophanic and mediatorial imagery crucial for the development of early Jewish mysticism. The study demonstrates that mediatorial traditions of the exalted patriarchs and prophets played an important role in facilitating the transition from apocalypticism to early Jewish mysticism.

Foucault continues on the theme of his 1978 course by focusing on the study of liberal and neo-liberal forms of government and concentrating in particular on two forms of neo-liberalism: German post-war liberalism and the liberalism of the Chicago School.

This book is the result of a decision taken in 1980 to begin studying the history of mathematics in the nineteenth century. I hoped by doing it to learn some thing of value about Kovalevskaya herself and about the mathematical world she inhabited. Having been trained as a mathematician, I also hoped to learn something about the proper approach to the history of the subject. The decision to begin the study with Kovalevskaya, apart from the intrinsic interest of Kovalevskaya herself, was primarily based upon the fact that the writing on her in English had been done by people who were interested in sociological and psychological aspects of her life. None of these writings discussed her mathematical work in much detail. This omission seemed to me a serious one in biographical studies of a woman whose primary significance was her mathematical work. In regard to both the content of nineteenth century mathematics and the nature of the history of mathematics I learned a great deal from writing this book. The attempt to put Kovalevskaya's work in historical context involved reading dozens of significant papers by great mathematicians. In many cases, I fear, the purport of these papers is better known to many of my readers than to me. If I persevered despite misgivings, my excuse is that this book is, after all, primarily about Kovalevskaya. If specialists in Euler, Cauchy, etc.

How do schools worldwide treat the Holocaust as a subject? In which countries does the Holocaust form part of classroom teaching? Are representations of the Holocaust always accurate, balanced and unprejudiced in curricula and textbooks? This study, carried out by UNESCO and the Georg Eckert Institute for International Textbook Research, compares for the first time representations of the Holocaust in school textbooks and national curricula. Drawing on data which includes countries in which there exists no or little information about representations of the Holocaust, the study shows where the Holocaust is established in official guidelines, and contains a close textbook study, focusing on the comprehensiveness and accuracy of representations and historical narratives. The book highlights evolving practices

worldwide and thus provides education stakeholders with comprehensive documentation about current trends in curricula directives and textbook representations of the Holocaust. It further formulates recommendations that will help policy-makers provide the educational means by which pupils may develop Holocaust literacy.

The social history of Japan between the First and Second World Wars is a neglected area of study. The contributors to this volume consider factors such as nationalism, class, gender and race. They also explore the ideas and activities of a number of new social and political groups, such as the urban white collar class (including middle class working women), socialists, industrial workers and emigrants. The book questions the myth of Japanese homogeneity, and gives an emphasis to the diversity, cross-currents and socio-political tensions that characterised the 1920s and 1930s.

The first edition of this book appeared in 1953; the second, revised and enlarged, in 1960. The present, third edition is essentially a reprint of the second, except for the correction of a few misprints and the following remarks, which refer to some recent publications\* and replace the brief preface to the second edition. Neither Eudemus nor Theophrastus, so I said (p. 208f. ) knew a branch of theoretical philosophy the object of which would be something called  $\theta'$ .  $\eta \sim \theta'$ .  $\eta$  and which branch would be distinct from theology. And there is no sign that they found such a branch (corresponding to what was later called *metaphysica generalis*) in Aristotle. To the names of Eudemus and Theophrastus we now can add that of Nicholas of Damascus. In 1965 H. J. Drossaert Lulofs published: *Nicolaus Damascenus On the Philosophy of Aristotle* (Leiden: Brill), Le. fragments of his  $\mu$ :pr.  $\eta$ jc; 'ApLO''t'o't'&AOUC; qJLAOO'OqJLiXC; preserved in Syriac together with an English translation. In these fragments we find a competent presentation of Aristotle's theoretical philosophy, in systematic form. Nicholas subdivides Aristotle's theoretical philosophy into theology, physics, and mathematics and seems to be completely unaware of any additional branch of philosophy the object of which would be  $\theta'$ .  $\eta \sim \theta'$ .  $\eta$  distinct from theology with its object (the divine).

Tunnels and Underground Cities: Engineering and Innovation meet Archaeology, Architecture and Art. Volume 1: Archaeology, Architecture and Art in Underground Construction contains the contributions presented in the eponymous Technical Session during the World Tunnel Congress 2019 (Naples, Italy, 3-9 May 2019). The use of underground space is continuing to grow, due to global urbanization, public demand for efficient transportation, and energy saving, production and distribution. The growing need for space at ground level, along with its continuous value increase and the challenges of energy saving and achieving sustainable development objectives, demand greater and better use of the underground space to ensure that it supports sustainable, resilient and more liveable cities. The contributions cover a wide range of topics, from urban tunnelling under archaeological findings in Naples (Italy) with ground freezing and grouting techniques, via the functional role of heritage in metro projects, to interdisciplinary research in geotechnical engineering and geoarchaeology - a London case study. The book is a

valuable reference text for tunnelling specialists, owners, engineers, archaeologists, architects, artists and others involved in underground planning, design and building around the world, and for academics who are interested in underground constructions and geotechnics.
