OSBORN WILLIAMS

Progress Toward Restoring the Everglades AASHTO

This report is the first in a
congressionally mandated series of
biennial evaluations of the progress
being made by the Comprehensive

Everglades Restoration Plan (CERP), a
multibillion-dollar effort to restore
historical water flows to the Everglades
and return the ecosystem closer to its
natural state, before it was transformed
by drainage and by urban and
agricultural development. The
Restoration plan, which was launched in
1999 by the U.S. Army Corps of
Engineers and the South Florida Water

Management District, includes more than 40 major projects that are expected to be completed over the next three decades. The report finds that progress has been made in developing the scientific basis and management structures needed to support a massive effort to restore the Florida Everglades ecosystem. However, some important projects have been delayed due to several factors including budgetary restrictions and a project planning process that can be stalled by unresolved scientific uncertainties. The report outlines an alternative approach that can help the initiative move forward even as it resolves remaining scientific uncertainties. The report calls for a boost in the rate of federal spending if the restoration of Everglades National Park

and other projects are to be completed on schedule.

Miami Harbor Navigation Study, Miami-Dade County National Academies Press Recognizing the importance of wetland protection, the Bush administration in 1988 endorsed the goal of "no net loss" of wetlands. Specifically, it directed that filling of wetlands should be avoided, and minimized when it cannot be avoided. When filling is permitted, compensatory mitigation must be undertaken; that is, wetlands must be restored, created, enhanced, and, in exceptional cases, preserved, to replace the permitted loss of wetland area and function, such as water quality improvement within the watershed. After more than a dozen years, the national commitment to "no net loss" of wetlands

has been evaluated. This new book explores the adequacy of science and technology for replacing wetland function and the effectiveness of the federal program of compensatory mitigation in accomplishing the nation's goal of clean water. It examines the regulatory framework for permitting wetland filling and requiring mitigation, compares the mitigation institutions that are in use, and addresses the problems that agencies face in ensuring sustainability of mitigated wetlands over the long term. Gleaning lessons from the mixed results of mitigation efforts to date, the book offers 10 practical guidelines for establishing and monitoring mitigated wetlands. It also recommends that federal, state, and local agencies undertake specific

institutional reforms. This book will be important to anyone seeking a comprehensive understanding of the "no net loss" issue: policy makers, regulators, environmental scientists, educators, and wetland advocates. Broward County Water Preserve Areas Project DIANE Publishing Provides guidance for communities that are considering how best to address a youth gang problem that already exists or threatens to become a reality. The guidance is based on the Model developed through the Office of Juvenile Justice and Delinquency Prevention (OJJDP). This Report describes the research that produced the Model, notes essential findings from evaluations of several programs demonstrating the Model in a variety of environments, and

outlines ¿best practices¿ obtained from practitioners with years of experience in planning, implementing, and overseeing the Model in their communities. Includes specific practices that work best in a step-by-step planning and implementation process for communities using the Model. Illus.

Seeking Order in Anarchy John Wiley & Sons

Detailed and comprehensive, *Serious and Violent Juvenile Offenders* presents authoritative discussions by a select group of leading scholars on issues surrounding serious and violent juvenile offenders. This population is responsible for a disproportionate percentage of all crime and poses the greatest challenge to juvenile justice policymakers. Under the skillful editorship of Rolf Loeber and

David P. Farrington, this unique volume integrates knowledge about risk and protective factors with information about intervention and prevention programs so that conclusions from each area can inform the other. Current literature on these two areas does not, for the most part, apply directly to serious and violent juvenile offenders. This volume contends that serious and violent juvenile offenders tend to start displaying behavior problems and delinquency early in life, warranting early intervention. It is the contributors' thesis that prevention is never too early. They also maintain, however, that interventions for serious and violent juvenile offenders can never be too late in that effective interventions exist for known serious and violent juvenile

offenders. Augmented by charts, tables, graphs, figures, and an extensive bibliography, *Serious and Violent Juvenile Offenders* is an excellent reference work and a must read for policy and lawmakers, judges, attorneys, law enforcement personnel, education administrators, researchers, academics, social workers, sociologists, as well as graduate students and interns.

Occupational and Residential Exposure Assessment for Pesticides

National Academies Press

Includes all works deriving from DOE, other related government-sponsored information and foreign nonnuclear information.

Gulf of Mexico OCS Oil and Gas Lease Sales, 2003-2007: Chapters 1-10 University of Alberta

This timely publication concentrates on the exposure to pesticides by agricultural workers and residential users of pesticides through inhalation and physical contact. The book discusses more recently discovered risks such as pesticides on indoor carpets and includes new trends in data interpretation. *Occupational & Residential Exposure Assessment for Pesticides* complements the other title on pesticide exposure in the series - *Pesticide Residues in Drinking Water*, by Hamilton/Crossley and is a must for all professionals in the Pesticide Industry as well as academics.

This is a general bibliography on Latin
America, covering a wide variety of
subjects, from pre-Columbian
civilizations, to Columbus, to Castro, to
the foreign debt, to pollution, ect. This

work will not only be of use to the
general, casual reader on Latin America,
but also to the more specialized
researcher. The book contains over 800
topics, with over 8,000 titles identified.

Journal of Soil and Water Conservation

"The idea of multilateralism is not
something that can be forced on states,
nor does it come naturally to them."

—Tom Keating Seeking Order in Anarchy
offers insights into both the theoretical
foundations and the real-world outcomes
of multilateralism in world affairs.

Recognizing that Tom Keating's theories,
though rooted in Canadian foreign
policy, have a broader application in
international relations, Robert W. Murray
has assembled an array of theoretical
interpretations of multilateralism, as well
as case studies examining its practical

effects. Drawing from the insights of fourteen noted scholars and featuring an essay from Tom Keating himself, this volume examines the conditions that encourage states to adopt multilateral strategies, and the consequences of doing so in the context of increasingly complex global politics. *Seeking Order in Anarchy* is an important book for scholars, graduate students, policy makers, and anyone interested in how multilateralism functions in today's world. Contributors: Francis Kofi Abiew, Edward Ansah Akuffo, Greg J. Anderson, David R. Black, Duane Bratt, Antonio Franceschet, Paul Gecelovsky, David J. Hornsby, Tom Keating, Christopher J.
