Some runners (and other  
athletes) have

experienced a feeling of  
total wellness and sense  
of euphoria after

engaging in intense  
physical activity. This

feeling has come to be  
known as runners high.

What is this runners high  
and how can we

experience more than a  
runners high?

"Psychologically, runners  
may experience euphoria,  
a feeling of being

invincible, a reduced state  
of discomfort or pain, and

even a loss in sense of  
time while running," says

ABOUT THE BOOK Jeff  
Atwood began the Coding  
Horror blog in 2004, and  
is convinced that it  
changed his life. He  
needed a way to keep

track of software  
development over time -  
whatever he was thinking  
about or working on. He  
researched subjects he  
found interesting, then  
documented his research  
with a public blog post,  
which he could easily find  
and refer to later. Over  
time, increasing numbers  
of blog visitors found the  
posts helpful, relevant  
and interesting. Now,  
approximately 100,000  
readers visit the blog per  
day and nearly as many  
comment and interact on  
the site. Effective  
Programming: More Than  
Writing Code is your one-  
stop shop for all things  
programming. Jeff writes  
with humor and  
understanding, allowing  
for both seasoned  
programmers and  
newbies to appreciate the  
depth of his research.  
From such posts as "The  
Programmer's Bill of  
Rights" and "Why Cant  
Programmers... Program?"  
to "Working With the  
Chaos Monkey," this book  
introduces the importance  
of writing responsible  
code, the logistics  
involved, and how people  
should view it more as a  
lifestyle than a career.

Keeping Your Priorities  
Straight EXCERPT FROM  
THE BOOK As a software  
developer, you are your  
own worst enemy. The  
sooner you realize that,  
the better off you'll be. I  
know you have the best of  
intentions. We all do.  
We're software  
developers; we love  
writing code. It's what we  
do. We never met a  
problem we couldn't solve  
with some duct tape, a  
jury-rigged coat hanger  
and a pinch of code. But  
Wil Shipley argues that  
we should rein in our  
natural tendencies to  
write lots of code: The  
fundamental nature of  
coding is that our task, as  
programmers, is to

recognize that every decision we make is a trade-off. To be a master programmer is to understand the nature of these trade-offs, and be conscious of them in everything we write. In coding, you have many dimensions in which you can rate code: Brevity of code, Featurefulness, Speed of execution, Time spent coding, Robustness, Flexibility. Now, remember, these dimensions are all in opposition to one another. You can spend three days writing a routine which is really beautiful and fast, so you've gotten two of your dimensions up, but you've spent three days, so the "time spent coding" dimension is way down. So, when is this worth it? How do we make these decisions? The answer turns out to be very sane, very simple, and also the one nobody, ever, listens to: Start with brevity. Increase the other dimensions as required by testing. I couldn't agree more. I've given similar advice when I exhorted developers to Code Smaller. And I'm not talking about a reductio ad absurdum contest where we use up all the clever tricks in our books to make the code fit into less physical space. I'm talking about practical,

sensible strategies to reduce the volume of code an individual programmer has to read to understand how a program works. Here's a trivial little example of what I'm talking about: `if (s == String.Empty) if (s == "")` It seems obvious to me that the latter case is... ..buy the book to read more!

So Young is the compelling story of a frightened but determined nine-year-old boy who suddenly comes down with a flu-like illness. For years, doctors attempted to classify his disease, an ailment that caused joint and muscles aches, low-grade fevers, and mystery pain for weeks at a time. Finally and tragically, with no other theories on the table, he was diagnosed with Juvenile Rheumatoid Arthritis. Despite the innocuous name, this crippling condition plagued the boy until he became an adult, with his symptoms multiplying many times over. Now, he has been fighting Rheumatoid Arthritis for over 25 years, and his story is a compelling, poignant, and exciting tale of life, love, and tragedy. It is guaranteed that you do not know how much a disease called arthritis can impact a life, so check out Daniel's story and become informed. Kids get arthritis too!  
*I'm a Computer Programmer. Yes, I'm Busy Being Awesome* Hardkernel, Ltd  
Every day, we use our

computers to perform remarkable feats. A simple web search picks out a handful of relevant needles from the world's biggest haystack: the billions of pages on the World Wide Web. Uploading a photo to Facebook transmits millions of pieces of information over numerous error-prone network links, yet somehow a perfect copy of the photo arrives intact. Without even knowing it, we use public-key cryptography to transmit secret information like credit card numbers; and we use digital signatures to verify the identity of the websites we visit. How do our computers perform these tasks with such ease? This is the first book to answer that question in language anyone can understand, revealing the extraordinary ideas that power our PCs, laptops, and smartphones. Using vivid examples, John MacCormick explains the fundamental "tricks" behind nine types of computer algorithms, including artificial intelligence (where we learn about the "nearest neighbor trick" and "twenty questions trick"), Google's famous PageRank algorithm

(which uses the "random surfer trick"), data compression, error correction, and much more. These revolutionary algorithms have changed our world: this book unlocks their secrets, and lays bare the incredible ideas that our computers use every day.

 Computer Graphics from Scratch demystifies the algorithms used in modern graphics software and guides beginners through building photorealistic 3D renders. Computer graphics programming books are often math-heavy and intimidating for newcomers. Not this one. Computer Graphics from Scratch takes a simpler approach by keeping the math to a minimum and focusing on only one aspect of computer graphics, 3D rendering. You'll build two complete, fully functional renderers: a raytracer, which simulates rays of light as they bounce off objects, and a rasterizer, which converts 3D models into 2D pixels. As you progress you'll learn how to create realistic reflections and shadows, and how to render a scene from any point of view. Pseudocode examples throughout make it easy to write your renderers in any language, and links to live JavaScript demos of each algorithm invite you to

explore further on your own. Learn how to: Use perspective projection to draw 3D objects on a 2D plane Simulate the way rays of light interact with surfaces Add mirror-like reflections and cast shadows to objects Render a scene from any camera position using clipping planes Use flat, Gouraud, and Phong shading to mimic real surface lighting Paint texture details onto basic shapes to create realistic-looking objects Whether you're an aspiring graphics engineer or a novice programmer curious about how graphics algorithms work, Gabriel Gambetta's simple, clear explanations will quickly put computer graphics concepts and rendering techniques within your reach. All you need is basic coding knowledge and high school math. Computer Graphics from Scratch will cover the rest.

National Geographic Books

"Can I love?" I often find myself asking this question. This seemingly simple question isn't as straightforward for me because of my disability. Having muscular dystrophy means that it has become progressively impossible for me to do many of the things I could

previously do. Knowing that I would eventually lose most of my physical abilities and independence, I didn't know if I should even embark on a journey to find romantic love. While I am perfectly able to love someone emotionally, what physical intimacy and long-term commitment can I offer? Is it just enough to love someone with all my heart, and only my heart, without the physical and practical aspects of a relationship? Will I become a burden to my partner instead? Being a hopeless romantic, my desire for romantic love compelled me to start on this journey. I had many crushes and met many failures that hurt me deeply. Eventually, my perseverance paid off and I entered a relationship. Short-lived it may be, it was one of the best experiences in my life - never have I felt so empowered before. Through this book, I want to share my journey to find love. May it open your heart and mind to the matter of love for persons with disabilities.

the Orb Phenomenon is a book about orbs or what physicist Dr. Klaus Heinemann calls "spirit emanations." Anyone can get orbs on film or photo with a little patience, understanding and intention. Christina Rawls started getting orbs on film and in photos around 2007 and these photos and the orbs exploded in 2011 to the present day when she can get them regularly each time she takes photos. This book explores Dr. Rawls's current choice to leave a full time teaching position in academia in order to help others understand more about the reality of psi phenomena, mediumship, and orb photography.  This book is a compilation from my 40 volume Ascension Book Series of my best chapters focusing on how to realize God in the Material Face of reality! This is one of the most revolutionary and cutting-edge books you will ever read! Everyone seeks God in a Spiritual sense, Mental sense and Emotional sense. Very few people realize, however, that to fully realize God in the highest and most full sense of the term, this must be realized on all Four Faces of God. This includes the honoring and sanctification of the Material Face of God. This is one of the few books ever written on this planet which explores this cutting-edge subject. This book is guaranteed to enhance your experience of God enormously and is guaranteed to accelerate

your path of initiation and Ascension. To fully realize God everyone must fully physically embody God on Earth, and must demonstrate and be God on Earth. This book will totally open your consciousness and eyes to how to appreciate and sanctify this most blessed aspect of God!
