A Commemoration of the  
Work of Rex Lowe was

written by students and  
colleagues of Rex Lowe to  
acknowledge his  
esteemed career that  
included exceptional  
contributions to research  
and teaching. Papers in  
the book cover a variety  
of topics in algal ecology,  
focusing on benthic algal  
ecology in freshwater

ecosystems. The studies  
provide an unusual  
combination of small-  
scale experiments and  
large-scale regional  
surveys that bridge both  
basic and applied ecology.  
Ecologists, limnologists,  
phycologists, and  
environmental scientists  
will find valuable

contributions to the development and application of algal research.

This book provides in-depth information on basic and applied aspects of biofuels production from algae. It begins with an introduction to the topic, and follows with the basic scientific aspects of algal cultivation and its

use for biofuels production, such as photo bioreactor engineering for microalgae production, open culture systems for biomass production and the economics of biomass production. It provides state-of-the-art information on synthetic biology approaches for algae suitable for biofuels production, followed by algal biomass harvesting, algal oils as fuels, biohydrogen production from algae, formation/production of co-products, and more. The book also covers

topics such as metabolic engineering and molecular biology for algae for fuel production, life cycle assessment and scale-up and commercialization. It is highly useful and helps you to plan new research and design new economically viable processes for the production of clean fuels from algae. Covers in a comprehensive but concise way most of the algae biomass conversion technologies currently available Lists all the products produced from

algae, i.e. biohydrogen, fuel oils, etc., their properties and potential uses Includes the economics of the various processes and the necessary steps for scaling them up Studies on the Marine Brown Alga Macrocystis Pyrifera Newnes The most original and authoritative voice of today's English lexicography presents a fully revised new edition of his beloved usage dictionary When Bryan Garner published the first edition of A Dictionary of

Modern American Usage in 1999, the book quickly became one of the most influential style guides ever written for the English language. After four previous editions and over twenty years, our language has evolved in many ways, and the powerful tool of big data has revolutionized lexicography. This extensively revised new edition fully captures these changes, featuring a thousand new entries and over two hundred replacement entries, thoroughly updated usage

data and ratios on word frequency based on the Google Ngram Viewer, a more balanced coverage of World Englishes, not just American and British, and the inclusion of gender-neutral language. However, one thing has not changed: in no sense is this a regular dictionary but a masterpiece of lexicography written with wit and personality by one of the preeminent authorities on the English language. To put it in David Foster Wallace's words, Garner's discussion of rhetoric and

style still borders on genius. From the (lost) battle between self-deprecating and self-depreciating to the misuse of it's for its, from the variant spelling patty-cake taking over pat-a-cake in American English to the singular uses of they, Garner explains the nuances of grammar and vocabulary and the linguistic blunders to which modern writers and speakers are prone, whether in word choice, syntax, phrasing, punctuation, or pronunciation. His

empirical approach liberates English from two extremes: from the purists who maintain that split infinitives and sentence-ending prepositions are malfeasances and from the linguistic relativists who believe that whatever people say or write must necessarily be accepted. The purpose of Garner's dictionary is to help writers, editors, and speakers use the language effectively. And it does so in a playful and persuasive way that will help you sound

grammatical but relaxed, refined but natural, correct but unpedantic. [A History of Magic and Experimental Science: The first thirteen centuries of our era](#) Springer Science & Business Media  
[Algae and Cyanobacteria in Extreme Environments](#) is a unique collection of essays, contributed by leading scientists from around the world, devoted to algae and some related microbes observed in unexpected harsh habitats, which it seems are an oasis or Garden of

Eden for these organisms. This timely book on Extremophilic algae, including its especially impressive micrographs, may provide clues about the edges of life on Earth and possibly elsewhere in the universe. Defining locations from the anthropomorphic point of view, the environments explored ranges from severe and distant to normal places. The algae discussed, microbial oxygenic phototrophs, are classified into various categories according to their habitats. They thrive

in various temperature ranges, at the limits of pH values, in salt solutions, under UV radiation, dryness, heavy metals, anaerobic niches, under various levels of illuminations, and under hydrostatic pressure. Authors discuss bio-diversely algal territories ecologically the hot springs with the thermophiles or acidothermophiles; Antarctica, the Arctic, and permafrost zones with their cold lovers (Psychrophiles); soda lakes with the alkaliphiles, saltine areas

with halophiles. In addition to general essays, Algal species discussed in detail include diatoms, Cyanidium, Galdieria, Dunaliella, and Chroococcidiopsis. This volume is a must for students of the field of biodiversity, as well as those in phycology, ecology and general biological research." The Porphyrin Handbook, Volume 13: Chlorophylls and Bilins: Biosynthesis,

Synthesis, and Degradation provides information pertinent to every aspect of the chemistry, synthesis, spectroscopy, and structure of phthalocyanines. This book examines the biology and medical implications of porphyrin systems. Organized into eight chapters, this volume begins with an overview of magnesium chelatase as a complex enzyme involved in the biosynthesis of chlorophyll and bacteriochlorophyll. This text then provides an

accurate historical review of the two enzymes involved in photosynthetic pigment production. Other chapters consider the processes that take place in darkness in all plants including angiosperms as the early steps of chlorophyll biosynthesis. This book discusses as well the reactivity and structures of the known chlorophyll catabolites from vascular plants, synthetic sources, and microorganisms. The final chapter deals with the methodologies used for the synthesis of bile

pigments. This book is a valuable resource for research scientists, engineers, and clinicians.

This collection of essays and reviews represents the most significant and comprehensive writing on Shakespeare's A Comedy of Errors. Miola's edited work also features a comprehensive critical history, coupled with a full bibliography and photographs of major productions of the play

from around the world. In the collection, there are five previously unpublished essays. The topics covered in these new essays are women in the play, the play's debt to contemporary theater, its critical and performance histories in Germany and Japan, the metrical variety of the play, and the distinctly modern perspective on the play as containing dark and disturbing elements. To compliment these new essays, the collection features significant scholarship and

commentary on The Comedy of Errors that is published in obscure and difficultly accessible journals, newspapers, and other sources. This collection brings together these essays for the first time.

In this incisive and polemical book, E. San Juan, Jr., the leading authority on Philippines-U.S. literary studies, goes beyond fashionable postcolonial theory to bring to our attention the complex history of Philippines-U.S. literary interactions. In sharp contrast to other works on

the subject, the author presents Filipino literary production within the context of a long and sustained tradition of anti-imperialist insurgency, and foregrounds the strong presence of oppositional writing in the Philippines. After establishing the historical context of U.S. intervention and Filipino resistance, San Juan examines the work of two very significant writers. The first, Carlos Bulosan, a journalist and union activist, became in the author's words a "tribune"

of the people. Bulosan's writings which combine critique and prophecy do not allow us to forget the atrocities inflicted on the Filipino people. The other, José Garcia Villa, lapsed into premature obscurity on account of the complexity of his writings about the Filipino predicament. Read through San Juan's eyes, these writers are revealed as multifaceted thinkers and activists, not stereotypical ethnic artists. San Juan goes beyond literary studies and contemporary

debates about nationalism and politics to point the way to a new direction in radical transformative writing. He uncovers hidden agendas in many previous accounts of U.S.-Philippine relations, and this book exemplifies how best to combine activist scholarship with historically grounded cultural commentary. Author note: E. San Juan, Jr. is Fellow of the Center for the Humanities and Visiting Professor of English, Wesleyan University, and Director of

the Philippines Cultural Studies Center. He was recently chair of the Department of Comparative American Cultures, Washington University, and Professor of Ethnic Studies at Bowling Green State University, Ohio. He received the 1999 Centennial Award for Literature from the Philippines Cultural Center. His most recent books are *Beyond Postcolonial Theory*, *From Exile to Diaspora*, *After Postcolonialism*, and *Racism and Cultural*

Studies.

"Menace to Empire is a profoundly original and ambitious book, a history of race and empire that traces both the colonial violence and the anticolonial rage that the United States spread across the Pacific between the Philippine-American War and World War II. Author Moon-Ho Jung argues that the US national security state as we know it was born out of attempts to repress

and silence colonized subjects, from the Philippines and Hawai'i to California and beyond, whose anticolonial aspirations challenged US claims to sovereignty. Jung examines how the contradictions of race, nation, and empire generated waves of revolutionary movements spanning the Pacific-- anticolonial, antiracist, and labor movements that exposed and confronted the US empire. In response, the US state closely monitored and brutally suppressed those

movements by racializing particular politics and distinct communities as seditious, exaggerating fears of pan-Asian solidarities and sowing anti-Asian racism under the guise of national security. Menace to Empire transforms familiar themes in American history to highlight the critical role of colonial violence in the formation of radical movements and the antiradical origins of anti-Asian racism. Radicalized by their opposition to the US empire and racialized

as threats to US security, peoples in and from Asia pursued a revolutionary politics that gave rise to the national security state--the heart and soul of the US empire ever since"--Provided by publisher.

 Books on Southeast Asian nationalist movements make very little - if any - mention of women in their ranks. Biographical studies of politically active women in Southeast Asia are also rare. Women in

Southeast Asian Nationalist Movements makes a strong case for the significance of women's involvement in nationalist movements and for the diverse impact of those movements on the lives of individual women activists. Some of the 12 women whose political activities are discussed in this volume are well known, while others are not. Some of them participated in armed struggles, while others pursued peaceful ways of achieving national independence. The

authors show women negotiating their own subjectivity and agency at the confluence of colonialism, patriarchal traditions, and modern ideals of national and personal emancipation. They also illustrate the constraints imposed on them by wider social and political structures, and show what it was like to live as a political activist in different times and places. Fully documented and drawing on wider scholarship, this book will be of interest to students of Southeast Asian history

and politics as well as readers with a particular interest in women, nationalism and political activism.

The Porphyrin Handbook: Chlorophylls and bilins : biosynthesis, synthesis, and degradation Springer Revolutionizing Feminism offers the first feminist

analysis of the human rights crisis in the Philippines during the Arroyo presidency (2001-2010) and the declaration of the country as the 'second front' in the US-led 'war on terror'. During this period over 1,000 activists, including peasants, journalists and lawyers, were murdered. Lacsamana situates Filipino women within the international division of labour, showing the connection between the 'super-exploitation' of their labour power at home and their migration

abroad as domestic workers, nurses, nannies, entertainers, and 'mail-order brides'. In contrast to the cultural turn in feminist theorising that has retreated from the concepts of class and class exploitation, Revolutionizing Feminism seeks to reorient feminist scholarship in order to better understand the material realities of those living in an increasingly unstable and impoverished global south.

Microalgae have been largely commercialized as food and feed additives, and their potential as a source of high-added value compounds is well known. Yet, only a few species of microalgae have been genetically transformed with efficiency. A better understanding of the mechanisms that control the regulation of gene expression in eukaryotes is therefore needed. In this book a group of

outstanding researchers working on different areas of microalgae biotechnology offer a global vision of the genetic manipulation of microalgae and their applications.

The marine environment accounts for most of the biodiversity on our planet,

while offering a huge potential for the benefit and wellbeing of mankind. Its extensive resources already constitute the basis of many economic activities – but many more are expected in coming years. This book covers current knowledge on uses of marine algae to obtain bulk and fine chemicals, coupled with optimization of the underlying production and purification processes. Major gaps and potential opportunities in this field are discussed in a critical manner. The current

trends pertaining to marine macro- and microalgae are explained in a simple and understandable writing style. This book covers a wide variety of topics, and as such it will be appropriate as both student text and reference for advances researchers in the field. *Marine Macro- and Microalgae* Univ of California Press Algae Abstracts is the first in a series of bibliographies on water resources and pollution published by IFI/ Plenum

Data Corporation in cooperation with the Water Resources Scientific Information Center (WRSIC). It is produced wholly from the information base comprising material abstracted and indexed for Selected Water Resources Abstracts. The bibliography is divided into volumes according to the publication dates of the source documents. Volume 1 contains 569 abstracts covering publication dates up to and including 1969; Volume 2 contains 730

abstracts covering the years 1970 to 1972. The material included in this bibliography represents computer selections based on the presence of a form of the word "alga" somewhere in the referenced citation. Substantively, the material typifies WRSIC's "centers of competence" approach to information support of the Office of Water Resources

Research (OWRR) of the Department of the Interior. Most of the references in this bibliography are the work of the center of competence on eutrophication at the University of Wisconsin. The indexes refer to the WRSIC accession number, which follows each abstract. The Significant Descriptor Index is made up of a fraction of the

total descriptors and identifiers by which each paper has been indexed. It represents weighted terms that best describe the information content; this status is indicated by the asterisks which precede them. The General Index includes all the remaining descriptors and identifiers by which each paper in this bibliography has been indexed.
