 Intellectual history and early modern history have always occupied an important place in Past and Present. First published in 1974, this volume is a collection of original articles and debates, published in the journal between 1953 and May 1973, dealing with many aspects of the intellectual history of the seventeenth century. Several of the contributions have been extremely influential, and the debates represent major standpoints in controversies over genesis of modern ideas. Although England is the focus of attention for most of the contributors, their themes have wider significance. Among the topics covered in the collection are the political thought of the Levellers and of James Harrington; radical social movements of the Puritan Revolution; the ideological context of physiological theories associated with William Harvey; the relationship between science and religion and the social relations of science; and the function of millenarianism and eschatology in the seventeenth century. The editor's Introduction indicates the context in which the articles were composed and provides valuable bibliographical information about the subjects discussed.

Although contemporary art in Indonesia is completely integrated within the global art discourse, the fundamental context of Indonesian artists is in fact quite different from that of the contemporary Western artistic practice in which notions of individuality and autonomy play a key role. Indonesian initiatives tend to include more of an awareness of local networks, and a contextual (as opposed to purely conceptual) way of thinking and acting. This softcover book, *Also-Space, From Hot to Something Else*, focuses mainly on a Jakarta-based artists initiative called *ruangrupa*, and to a lesser degree on a number of other Indonesian artists and initiatives, as case studies of how Indonesian artists organize and manifest themselves individually and collectively. Reinaart Vanhoe (b. 1972, Belgium) lives in both Rotterdam (Holland) and Jakarta (Indonesia); his practice consists of research-based activities that Vanhoe translates into books, exhibitions,

 Companies know how to meet the demands of shareholder value: years of managerial excellence testify to this achievement. Many

also know how to create stakeholder value – through traditional approaches such as CSR and philanthropy which predictably lead to trade-offs and added costs. What remains elusive is discovering is how to meet both shareholder and stakeholder requirements in the core business – without mediocrity and without compromise – creating value for the company that cannot be disentangled from the value it creates for society and the environment. What if sustainability was embedded into the DNA of your organization? How can you incorporate environmental, health and social value into its very core? Many companies, despite their best intentions, "bolt on" sustainability as an afterthought to their core strategies. They trumpet green initiatives and social philanthropy which lie at the margins of the business, with symbolic wins that inadvertently highlight the unsustainability of the rest of their activities. Today's ecological and social pressures require a different business response – one that existing strategy frameworks fail adequately to address. In *Embedded Sustainability*, authors Chris Laszlo and Nadya Zhexembayeva explain and predict how companies can better leverage global challenges for enduring profit and sustained growth. They introduce the marquis concept of embedded sustainability: the incorporation of environmental, health, and social value into the heartbeat of the product life-cycle with no trade-off in price or quality – no social or green premium. This book helps readers to comprehend and implement the notion of embedded sustainability. At its best, embedded sustainability is invisible, similar to quality. In addition to delivering socially and environmentally conscious products for consumers, it is capable of considerably motivating employees. Most of all, it enables smart companies to create even more value for both their shareholders and stakeholders.

At once far flung and intimate, a fascinating look at how finding our way make us human. "A marvel of storytelling." —Kirkus (Starred Review) In this compelling narrative, O'Connor seeks out neuroscientists, anthropologists and master navigators to understand how navigation ultimately gave us our humanity. Biologists have been trying to solve the mystery of how organisms have the ability to migrate and orient with such precision—especially since our own adventurous ancestors spread across the world without maps or instruments. O'Connor goes to the Arctic, the Australian bush and the South Pacific to talk to masters of their environment who seek to preserve their traditions at a time when anyone can use a GPS to navigate. O'Connor explores the neurological basis of spatial orientation within the hippocampus. Without it, people inhabit a dream state, becoming amnesiacs incapable of finding their way, recalling the past, or imagining the future. Studies have shown that the more

we exercise our cognitive mapping skills, the greater the grey matter and health of our hippocampus. O'Connor talks to scientists studying how atrophy in the hippocampus is associated with afflictions such as impaired memory, dementia, Alzheimer's Disease, depression and PTSD. *Wayfinding* is a captivating book that charts how our species' profound capacity for exploration, memory and storytelling results in topophilia, the love of place. "O'Connor talked to just the right people in just the right places, and her narrative is a marvel of storytelling on its own merits, erudite but lightly worn. There are many reasons why people should make efforts to improve their geographical literacy, and O'Connor hits on many in this excellent book—devouring it makes for a good start." —Kirkus Reviews

This book is intended for electric utility managers, directors, and power system planners, regulators, and policy makers interested in the steps needed to realize the value of a modern power delivery system. This book describes the elements needed in planning and implementing a "Smart Grid" by outlining how the electricity delivery system can be modernized so it monitors, protects, and automatically optimizes the operation of its interconnected elements—from the central and distributed generator through the high-voltage network and distribution system, to energy storage installations and to end-use consumers and their thermostats, electric vehicles, appliances, and other household devices. This comprehensive guide highlights emerging concepts of cyber and physical security, resiliency, and the newest architecture—"The Integrated Grid." You'll gain an understanding of how a two-way flow of electricity and information can be used to create an automated, widely distributed energy delivery network.

"Nissan Z: 50 Years of Exhilarating Performance is a handsomely illustrated coffee-table book celebrating five decades of Nissan's immensely popular Z-Cars, from the ground-breaking 1970 240Z to today's top-performing 370Z, including the 50th anniversary Z. The story begins with the introduction of Nissan's (then Datsun) first foray into the sports-car world, the Datsun Roadster then gets into the details regarding the creation of the legendary 240Z. Each derivative is explored: including 260Z, 280Z, 280ZX, 300ZX through today's 370Z. Nissan's Z is one of the few sports car models to be in production for 50 years, and Nissan Z pays fitting tribute to its proud heritage"--

Intelligent Transport Systems (ITS) are the way forward for sustainable growth of mobility at all levels (local, regional, national, transnational). The book reviews the current status of Research & Development. It includes connected (and autonomous) cars and buses, real-world large-scale field trials, data analysis and assessment of technological solutions. Standards and normative aspects in the domain of Electronic Fee Collection and Cooperative Systems oriented to probe data collection, safety and non-safety critical applications in vehicular networks, are studied. The book provides the rational, perspectives, and technical issues for the implementation of ITS solutions in a genuine inter-modal scenario, taking the example of a Mediterranean seaport, actively involved in testing and validation of ITS standards. The novelty of this book is that it covers R&D, standards, and pilots, all under one cover. Rather than stressing the novelty in ICT, the authors have presented the need for system-level integration, assessment of existing (standard) solutions, and piloting experiments in real-world industrial scenarios.

For courses in Internet Marketing or E-marketing This book teaches marketers how to engage and listen to buyers, and how to use what they learn to improve their offerings in today's Internet- and social media-driven marketing environment. It brings traditional marketing coverage up-to-date with a thorough, incisive look at e-marketing planning and marketing mix tactics from a strategic and tactical perspective. The focus is on the Internet and other technologies that have had a profound effect on how marketing is approached today. Included is coverage of marketing planning; legal and global environments; e-marketing strategy; and marketing mix and customer relationship management strategy and implementation issues. A major revision, this seventh edition reflects the disruption to the marketing field brought about by social media. As such it covers many new topics that represent the changes in e-marketing practice in the past two years. Because of the ever-changing landscape of the Internet, the authors suggest reading this book, studying the material, and then going online to learn more about topics of interest. Features: Better understanding of new concepts in today's electronic marketplace is accomplished as the book puts that new terminology into traditional marketing frameworks. Readers are encouraged to exercise critical thinking and attention to their own online behavior in order to better understand the e-marketer's perspective, strategies, and tactics—to think like a marketer. Although the focus is on e-marketing in the United States, readers also see a global perspective in the coverage of market developments in both emerging and developed nations. An entire chapter devoted to law and ethics, and contributed by a practicing attorney, updates readers on the latest changes in this critical area. Readers are guided in learning a number of e-marketing concepts with the help of some outstanding pedagogical features: -Marketing concept grounding helps readers make the connection between tradition and today. Material in each chapter is structured around a principle of marketing framework, followed by a look at how the internet has changed the structure or practice, providing an ideal bridge from previously learned material. -Learning objectives set the pace and the goals for the material in each chapter. -Best practices from real companies tell success stories, including new examples of firms doing it right. -Graphical frameworks serve as unique e-marketing visual models illustrating how each chapter fits among others. -Chapter summaries help readers review and refresh the material covered. -Key terms are identified in bold text within the chapter to alert readers to their importance. -Review and discussion questions are another device to be used for refreshing readers' understanding of the material in the chapter. -Web activities at the end of each chapter help readers become further involved in the content. -This revision reflects the disruption to the marketing field based on social media. A major revision from the sixth edition, it includes many new topics, as dictated by changes in e-marketing practice in the past two years. -Three important Appendices include internet adoption statistics, a thorough glossary, and book references. NEW. Students get a broader look at social media as it is now integrated throughout the book, instead of confined to one chapter. NEW. A look at new

business models continues and strengthens the approach of learning from real life examples. Added and described in detail are such models as social commerce (and Facebook commerce), mobile commerce and mobile marketing, social CRM, crowdsourcing, and many important but less pervasive models such as crowdfunding, freemium, and flash sales. NEW. Chapters 12, 13 and 14 were completely rewritten to reflect the move from traditional marketing communication tools to the way practitioners currently describe IMC online: owned, paid and earned media. NEW. Readers see examples of many new and interesting technologies that are today providing marketing opportunities, both in the Web 2.0 and 3.0 sections. NEW. The chapter-opening vignettes continue to play an important role in illustrating key points. Two new vignettes and new discussion questions about each chapter opening vignette are included. NEW. Included are many new images in every chapter, plus updated "Let's Get Technical" boxes. NEW. Other chapter-specific additions that further enhance understanding of the concepts include: -More social media performance metrics (Ch. 2) -"Big data" and social media content analysis (Ch. 6) -New consumer behavior theory and "online giving" as a new exchange activity (Ch. 7) -Social media for brand building (Ch. 9) -App pricing and web page pricing tactics (Ch. 10)

An Electric Car is often referred to as an electric vehicle or EV. In *Select Your Electric Car*, I explore the various options of EVs available in the United States. If you live in California or in one of the other states which have similar zero emission vehicle standards, you will have more choices. These states have laws that car companies selling cars in their state must provide a certain percentage of EVs. I am going to focus on the EVs which are widely available in the US now (2018). I'll compare them, so that hopefully you will be able to purchase the EV which fits your lifestyle - or the lifestyle which you plan to adopt once you own an EV. I'll also look at a few other EVs which are not as widely available. In 2019, car dealers will be offering more models of EVs nationally, at least that's the plan. I'm thinking that you might want a car with more of a track record. So I won't be saying as much about those models, though I will mention them. The US ranks seventh in number of EVs sold, following China, United Kingdom, France, Sweden, Netherlands, and Norway who is at #1. If you wanted to wait until 2019 to drive your EV, and you had \$200,000 (\$200K) to spare, and you had a Commercial Driver's License (CDL) or could hire a driver who did; why not just purchase a Tesla Electric Semi. After all, Elon Musk is now saying it will have a 600-mile range. Even if he's only 75% correct, that's still a 450-mile range. I could drive into town (Olympia) every day of the week and up to the big city (Seattle) on the weekend. And I

still wouldn't have to charge my rig. And in Aug 2018, a Tesla Semi made it from Coast to Coast across the US. It did have to be recharged. But the driver was able to find charging stations which were powerful enough to charge it. But where would I park the thing? Besides I don't have a CDL. And the few people I know who do aren't interested in being my personal chauffeur. I also definitely don't have \$200K that I can afford to spend on my next vehicle. I won't talk about the Tesla Semi in this book. You can read about that vehicle in my book - *The Hybrid Vehicle*. I'll also mention techniques for driving an EV which will expand their range. At least these techniques work when driving my 2015 Electric Nissan Leaf. Rating G; Reading Level Easy 6th Grade; Longest Word: Oversimplification
