In The Family Fund, first published in 1980, Bradshaw discusses the introduction of The Family Fund- a grant given to families in response of the discovery of the damages caused by the Thalidomide drug. He examines all aspects of the Fund including its origins, aims, publicity and its future. This text is ideal for students of sociology.

An illustrated exploration of colors and patterns in the animal kingdom, what they communicate, and how they function in the social life of animals. Are animals able to appreciate what humans refer to as "beauty"? The term scarcely ever appears nowadays in a scientific description of living things, but we humans may nonetheless find the colors, patterns, and songs of animals to be beautiful in apparently the same way that we see beauty in works of art. In *Animal Beauty*, Nobel Prize-winning biologist Christiane Nüsslein-Volhard describes how the colors and patterns displayed by animals arise, what they communicate, and how they function in the social life of animals. Watercolor drawings illustrate these amazing instances of animal beauty. Darwin addressed the topic of ornament in his 1871 book *The Descent of Man and Selection in Relation to Sex*, and did not hesitate to engage with criteria of beauty, convinced that animals experienced color and ornament as attractive and agreeable in the same way that we do, and that the role this played in mate choice pointed to a "sexual selection" distinct from natural selection. Nüsslein-Volhard examines key examples of ornament and sexual selection in the animal kingdom and lays the groundwork for biological aesthetics. Noting that color patterns have not been a research priority—perhaps because they appeared to be nonessential luxuries rather than functional necessities—Nüsslein-Volhard looks at recent scientific developments on the topic. In part because of Nüsslein-Volhard's own research on the zebrafish, it is now possible to decipher the

molecular genetic mechanisms that lead to production of colors in animal skin and its appendages and control its pattern and distribution.

This volume is designed as a 12-lecture textbook, which can serve as a course companion, self teaching guide and handbook for basic concepts. Each lecture comprises 20 pages, in which the methods are introduced, examples shown and the code is given. All examples are computed with open source software, mainly R, and with archaeological data available from the book's website. The book does not describe elaborated high-end models but rather very basic modelling concepts that serve as components in more complex models. The book enables the reader to construct such models by themselves and be sensitive for certain problems. In addition it gives hints for the interpretation of the results. Students are usually quick to apply fancy methods yet fail in the proper interpretation due to a lack of understanding of the underlying principles. This problem is addressed by the proposed book through three concepts: 1. Command line software forces the students to first learn some details before they are able to produce results on their own. 2. The book is focused on principles and methods. When the students understand a few basic principles, they have far better access to a wide range of related methods. 3. Examples of poor analysis highlight common pitfalls. The volume attempts to be an applied, minimalistic and efficient textbook and is based upon several successful courses.

Much has been written and debated on lone mothers. However little has been discussed about non-resident fathers. *Absent Fathers* is part of a growing literature on men and masculinities and takes this debate further. Drawn from one of the best social policy units in the UK and results from the current ESRC

Programme on Population and Household Change, it will provide a text for undergraduates in social policy and should also be important for professionals concerned with family breakdown and child support.

*Das Affinity Photo-Praxisbuch* Springer Science & Business Media Structure and Interpretation of Computer Programs has had a dramatic impact on computer science curricula over the past decade. This long-awaited revision contains changes throughout the text. There are new implementations of most of the major programming systems in the book, including the interpreters and compilers, and the authors have incorporated many small changes that reflect their experience teaching the course at MIT since the first edition was published. A new theme has been introduced that emphasizes the central role played by different approaches to dealing with time in computational models: objects with state, concurrent programming, functional programming and lazy evaluation, and nondeterministic programming. There are new example sections on higher-order procedures in graphics and on applications of stream processing in numerical programming, and many new exercises. In addition, all the programs have been reworked to run in any Scheme implementation that adheres to the IEEE standard.

This chapter provides a brief overview of the book highlighting the modest progress from child welfare to child well-being reflected in these chapters, and the parallel movement in Kahn's career and research, as his scholarship developed over the years. It then moves to explore the relationship between two overarching themes, child and family policy stressing a universal approach to children and social protection stressing a more targeted approach to disadvantaged and vulnerable individuals including children and the complementarity of these strategies. Introduction To a large extent Alfred J. Kahn was at the forefront of the developments in the field of child welfare services

(protective services, foster care, adoption, and family preservation and support).

Overtime his scholarship moved to a focus on the broader policy domain of child and family policy and the outcomes for child wellbeing. His work, as is true for this volume, progressed from a focus on poor, disadvantaged and vulnerable children to a focus on all children. He was convinced that children, by definition, are a vulnerable population group and that targeting all children, implementing a universal policy as a strategy would do more for poor children than a narrowly focused policy targeted on poor children alone. As we first argued more than three decades ago (Not for the Poor Alone; "Universalism and Income Testing in Family Policy"), one could target the most disadvantaged within a universal framework, and this would lead to more successful results than targeting only the poor.

Now in its fourth edition, this is the classic assessment of the state of child well-being in the United Kingdom. This edition has been updated to review the latest evidence, examining the outcomes for children of the impact of the economic crisis and austerity measures since 2008. It draws together a vast amount of robust empirical evidence and includes intra-UK and international comparisons. Edited by a highly regarded expert in the field, each chapter covers a different domain of child well-being, including health, wellbeing, housing and education. This is an invaluable resource for academics, students, practitioners and policy makers concerned with child welfare and wellbeing.

*Consumption Corridors: Living a Good Life within Sustainable Limits* explores how to enhance peoples' chances to live a good life in a world of ecological and social limits. Rejecting familiar recitations of problems of ecological decline and planetary boundaries, this compact book instead offers a spirited explication of what everyone desires: a good life. Fundamental concepts of the good life are explained and explored, as are forces that threaten the good life for all. The remedy, says the book's seven international authors, lies with the concept of consumption corridors, enabled by mechanisms of citizen engagement and deliberative democracy. Across five concise chapters, readers are invited into conversation about how wellbeing can be enriched by social change that joins "needs satisfaction" with consumerist restraint, social justice, and environmental sustainability. In this endeavour, lower limits of consumption that ensure minimal needs satisfaction for all are important, and enjoy ample precedent. But upper limits to consumption, argue the authors, are equally essential, and attainable, especially in those domains where limits enhance rather than undermine essential freedoms. This book will be of great interest to students and scholars in the social sciences and humanities, and environmental and sustainability studies, as well as to community activists and the general public.
