This Part of GB/T 6730 specifies the gravimetric determination of silicon content in iron ores. This Part is applicable to natural iron ores, iron concentrates and man-made ore agglomerates, including sintered products. The range of determination (mass fraction) is 1.00% ~ 15.00%.

The Encyclopedia Britannica <https://www.chinesestandard.net>

This landmark publication distills the body of knowledge that characterizes mineral processing and extractive metallurgy as disciplinary fields. It will inspire and inform current and future generations of minerals and metallurgy professionals. Mineral processing and extractive metallurgy are atypical disciplines, requiring a combination of knowledge, experience, and art. Investing in this trove of valuable information is a must for all those involved in the industry—students, engineers, mill managers, and operators. More than 192 internationally recognized experts have contributed to the handbook's 128 thought-provoking chapters that examine nearly every aspect of mineral processing and extractive metallurgy. This inclusive reference addresses the magnitude of traditional industry topics and also addresses the new technologies and important cultural and social issues that are important today. Contents
 Mineral Characterization and Analysis
 Management and Reporting
 Comminution
 Classification and Washing
 Transport and Storage
 Physical Separations
 Flotation
 Solid and Liquid Separation
 Disposal
 Hydrometallurgy
 Pyrometallurgy
 Processing of Selected Metals, Minerals, and Materials

"A Text-book of Assaying: For the Use of Those Connected with Mines" by J. J. Beringer, C. Beringer. Published by Good Press. Good Press publishes a wide range of titles that encompasses every genre. From well-known classics & literary fiction and non-fiction to forgotten—or yet undiscovered gems—of world literature, we issue the books that need to be read. Each Good Press edition has been meticulously edited and formatted to boost readability for all e-readers and devices. Our goal is to produce eBooks that are user-friendly and accessible to everyone in a high-quality digital format.

This Part of GB/T 6730 specifies the molybdenum blue spectrophotometric method for the determination of phosphorus content. This method is applicable to the determination of phosphorus content in natural iron ores, iron concentrates, agglomerates, including sintered products. The presence of arsenic, barium, titanium does not affect the determination results. The determination range (mass fraction) is 0.003% ~ 2.00%.

The Encyclopædia Britannica <https://www.chinesestandard.net>

This Part of GB/T 6730 specifies the method for the determination of total iron content by titanium trichloride reduction potassium dichromate titration method (conventional method). This Part applies to the determination of total iron content in natural iron ore, iron concentrate and lump ore, including sinter and pellets. The determination range (mass fraction): 25%~72%.

Encyclopaedia Britannica Good Press

This standard specifies the method for determining the content of calcium, silicon, magnesium, titanium, phosphorus, manganese, aluminum, barium in iron ore, by wavelength dispersive X-ray fluorescence spectrometer.

The Chemical News and Journal of Industrial Science Society for Mining, Metallurgy & Exploration

This Part of GB/T 6730 specifies the determination of total iron content by titration of potassium dichromate after reduction of iron with titanium (III) chloride. This Part applies to the determination of total iron content in natural iron ores, iron concentrates, and agglomerations, including sintered products. The determination range (mass fraction): 30.0%~72.0%.

A System of Instruction in Quantitative Chemical Analysis A Systematic Handbook of Volumetric Analysis; Or, The Quantitative Estimation of Chemical Substances by Measure
 Energy and Mineral Resources for the 21st Century

This standard specifies the determination of silicon content in manganese ore by the perchloric acid dehydration gravimetric method. This standard applies to the determination of silicon content in fluorine-free manganese ores and manganese concentrates; the measurement range (mass fraction): 0.50% to 20.00%.
