 The DoD has treated ballistic missile
 defense (BMD) as a priority since the
 mid-1980s and has invested tens of
 billions of dollars to R&D such capabilities.
 In 2002, 2 key events transformed DoD's
 approach in this area: (1) the Sec. of Def.
 consolidated existing BMD elements into a

single acq'n. program and placed them
 under the mgmt. of the Missile Defense
 Agency (MDA); and (2) the Pres. directed
 MDA to begin fielding an initial
 configuration, or block, of BMD capabilities
 in 2004. MDA estimates that it will need
 \$53 billion between FY 2004 and 2009 to
 continue the development, fielding, and
 evolution of BMDs. This report assessed
 the extent to which MDA achieved
 program goals in FY 2003. Also considers
 shortcomings in how MDA defines its
 goals. Charts and tables.

Therefore, in order to improve security of supply the Community has developed since 1973 a programme assisting the oil industry to develop new technologies required for exploiting oil and gas resources outside and inside the Community territories. This programme (Regulations 3056/73 and 3639/85) has allowed remarkable achievements in a sector where innovation is needed to take up the challenge of producing oil and gas in difficult environments. This report shows the achievements of the Community programme. It gives evidence of the high technical level which has already been attained by the companies in the oil and gas sector with the support of the Community.

Among the many different approaches to "templating" with Perl--such as Embperl, Mason, HTML::Template, and hundreds of other lesser known systems--the Template Toolkit is widely recognized as one of the most versatile. Like other templating systems, the Template Toolkit allows programmers to embed Perl code and custom macros into HTML documents in order to create customized documents on the fly. But unlike the others, the Template Toolkit is as facile at producing HTML as it is at producing XML, PDF, or any other output format. And because it has its own simple templating language, templates can be written and edited by people who don't know Perl. In short, the Template Toolkit combines the best features of its competitors, with ease-of-use and flexibility, resulting in a technology that's fast, powerful and extensible, and ideally suited to the production and maintenance of web content and other dynamic document systems. In Perl Template Toolkit you'll find detailed coverage of this increasingly popular technology. Written by core members of the technology's development team, the book guides you through the entire process of installing, configuring, using, and extending the

Template Toolkit. It begins with a fast-paced but thorough tutorial on building web content with the Template Toolkit, and then walks you through generating and using data files, particularly with XML. It also provides detailed information on the Template Toolkit's modules, libraries, and tools in addition to a complete reference manual. Topics in the book include: Getting started with the template toolkit The Template language Template directives Filters Plugins Extending the Template Toolkit Accessing databases XML Advanced static web page techniques Dynamic web content and web applications The only book to cover this important tool, Perl Template Toolkit is essential reading for any Perl programmer who wants to create dynamic web content that is remarkably easy to maintain. This book is your surefire guide to implementing this fast, flexible, and powerful templating system.

Pro Oracle Application Express 4 is your key to mastering one of the most innovative products to come out of Oracle in years. Application Express, termed "APEX" for short, is fast becoming one of the easiest and most widely-used of tools for creating enterprise-level applications that run against an Oracle database. APEX is easy enough for power users to create ad-hoc applications atop something more reliable than a spreadsheet. Yet APEX is powerful and extensible enough to enable fully-scalable, enterprise-level applications that are accessed by thousands of users. Authors Tim Fox, John Scott, and Scott Spendolini take you to the professional level in developing for Application Express. They show how to handle user authentication in enterprise environments and how to extend APEX by writing components based upon Oracle's new plug-in architecture. You'll learn to deal with localization issues such as time zones and translations, and to customize the look and feel of an APEX website to blend

in with your corporate branding strategy. The authors also cover web service development, performance and scalability, and the production issues that you encounter in enterprise-level deployments. Many years of experience in solving the "hard problems" are coalesced in this book to help you, the reader, take advantage of all that APEX has to offer. Focuses on high-end, enterprise-level development Covers new features such as plug-ins and Websheets Introduces the new interface released with APEX 4.0 IOS Press

Time perception in the range of milliseconds to a few seconds is essential for many important sensory and perceptual tasks including speech perception, motion perception, motor coordination, and cross-modal interaction. For the brain to be in synchrony with the environment, the physical differences in the speeds of light and sound, as well as stimuli from other modalities such as odors, must be processed and coordinated (Pöppel & Bao 2014; Bao et al., 2015). Time is a subjective feeling that is modulated by emotional states which trigger temporal distortions (temporal dilation vs. contraction) (Wittmann et al., 2014), hence give rise to subjective time that may be different to event time as initially registered in the brain. Recent research suggests that time perception in a multisensory world is subject to prior task experience and shaped by (statistical) learning processes. Humans are active learners. That is, the engagement of the own body in a timing task within a perceptual-action loop will make a noticeable difference in timing performance, as compared to when humans only passively perceive the same perceptual scenario (Bao et al., 2015; Chen & Vroomen, 2013). This Research Topic of "Sub-and Supra-Second Timing: Brain, Learning and Development" has integrated sixteen submissions of novel

research on sub- and supra-timing. We have categorized the papers in this topic into the following four themes, from which we can deduce trends of research about multisensory timing in the sub- and supra-second range: Sensory timing, interaction and reliability Adaptive representation of

time, learning and temporal prediction Sensorimotor synchronization, embodiment and coordination Perspective of psychological moment and temporal organization Overall, the collections in "Sub-and Supra-Second Timing: Brain, Learning and Development" show some

recent trends and debates in multisensory timing research as well as provide a venue to inspire future work in multisensory timing.
