OpenOffice.org For Dummies shows Linux and Windows users how to use the OpenOffice (OO) desktop productivity suite in the For Dummies friendly, easy-to-understand style. This book explains how to download, install, and set up both the Linux and Windows versions of OO. The book is organized by the four key desktop applications provided in the OO suite: Writer (word processing product), Calc (spreadsheet product), Impress (presentation product), and Draw (graphics product). Each part focuses on one of the applications and explains how to use it and work with it on the Web. Other topics covered include: creating and formatting documents with Writer; using templates and styles; creating spreadsheets with Calc; manipulating spreadsheet data; creating a presentation with Impress; and creating images and editing existing images with Draw.

Nursing Research and Statistics is precisely written as per the Indian Nursing Council syllabus for the B.Sc. Nursing students. It may also serve as an introductory text for the postgraduate students and can also be helpful for GNM students and other healthcare professionals. The book is an excellent attempt towards introducing the students to the various research methodologies adopted in the field of nursing. Nursing Research: Expansion in existing content with more relevant practical examples from Indian scenario and inclusion of new topics such as Revised ICMR, National Ethical Guidelines for Biomedical and Health Research involving Human Participants-2017, Institute Ethical Committee, New classification of variables, New classification of assumptions, Annotated bibliography, Process of theory development, Updated classification of quantitative research designs, Newer methods of randomization, Clinical trials, Ecological research, Mixed method research designs, Types of risk bias in research, Voluntary sampling technique, Sampling in qualitative studies, Procedure of data collection, Guidelines for writing effective discussion, List of computer software used for qualitative data analysis, Reporting guidelines for various types of research studies, Reference management software, and Intramural & extramural research funding. Statistics: The existing content of statistics was supplemented with new more relevant examples and some of new topics were added such as Risk indexes (Relative Risk and Odd Ratio), Statistics of diagnostic test evaluation, Simple linear, Multiple linear and Logistic regression, and SPSS widow for statistical analysis. Multiple Choice Questions: Approximately 100 more multiple choice questions have been included, placed at the end of each chapter. These MCQs will be useful for the readers to prepare for qualifying entrance examinations, especially MScN and PhD nursing courses. Chapter Summary: Every chapter has been provided with a chapter summary at the end of each chapter to facilitate for quick review of content.

This highly informative and carefully presented textbook introduces the general principles involved in system design and optimization as applicable to thermal systems, followed by the methods to accomplish them. It introduces contemporary techniques like Genetic Algorithms, Simulated Annealing, and Bayesian Inference in the context of optimization of thermal systems. There is a separate chapter devoted to inverse problems in thermal systems. It also contains sections on Integer Programming and Multi-Objective optimization. The linear programming chapter is fortified by a detailed presentation of the Simplex method. A major highlight of the textbook is the inclusion of workable MATLAB codes for examples of key algorithms discussed in the book. Examples in each chapter clarify the concepts and methods presented and end-of-chapter problems supplement the material presented and enhance the learning process.

The goal of the O'Leary Series is to give students a basic understanding of computing concepts and to build the skills necessary to ensure that information technology is an advantage in whatever career they choose in life. The O'Leary Microsoft Office 2003 texts are crafted to be the true step-by-step way for students to develop Microsoft Office application skills. The text design emphasizes step-by-step instructions with full screen captures that illustrate the results of each step performed. Each Tutorial (chapter) combines conceptual coverage with detailed software-specific instructions. A running case that is featured in each tutorial highlights the real-world applications of each software program and leads students step-by-step from problem to solution.

Feasibility Analysis for Sustainable Technologies will lead you into a professional feasibility analysis for a renewable energy or energy efficiency project. The analysis begins with an understanding of the basic engineering description of technology in terms of capacity, efficiency, constraints, and dependability. It continues in modeling the cash flow of a project, which is affected by the installed cost, the revenues or expenses avoided by using the technology, the operating expenses of the technology, available tax credits and rebates, and laws regarding depreciation and income tax. The feasibility study is completed by discounted cash flow analysis, using an appropriate discount rate and a proper accounting for inflation, to evaluate the financial viability of the project. The elements of this analysis are illustrated using numerous examples of solar, wind and hydroelectric power, biogas digestion, energy storage, biofuels, and energy-efficient appliances and buildings.

The ultimate guide to the retrofitting of lighting for greater efficiency and performance Retrofitting outdated energy-guzzling lighting components with green energy-saving alternatives is a process that promotes sustainability and offers significant benefits for businesses, contractors, and the community at large. Not only can retrofitting improve the overall quality and functionality of light, it also can make spaces safer, easier and less costly to maintain, and more comfortable to inhabit. From lighting technology to retrofit financial analysis, Lighting Retrofit and Relighting evaluates the latest lighting system types, then demonstrates how to apply them for the greatest functional and cost-saving benefit. This book: Discusses the recent advances in lighting equipment and retrofittable controls, for both interior and outdoor use Explains how to do a lighting audit to identify and evaluate logical retrofit choices Includes case studies of retrofits, illustrating improvements in the quality and efficacy of new lighting Demonstrates how cost savings realized over time can not only pay for new equipment but produce a return on the investment Lighting Retrofit and Relighting serves as an ideal reference for students or professionals—whether they are energy auditors, designers, installers, facilities managers, or manufacturers—by taking a close look at the most current lighting technology illuminating pathways toward a brighter future.
