Handbook on Small Bore Rifle Shooting - Equipment, Marksmanship, Target Shooting, Practical Shooting, Rifle Ranges, Rifle Clubs Crowood Smallbore Rifle

Shooting is essential reading for those who are considering taking up the sport, and for those who already have some experience but wish to improve their skills and participate in competitions. It takes the reader forward

from the point at which the very first shot is fired, introduces new levels of understanding and competence, provides useful advice, and answers many of the questions frequently asked by beginners. The key topics, which are examined in detail, include breathing, aiming, trigger control and 'follow through'. In addition, step-by-step guidance is presented on how to build a comfortable and stable prone position whilst wearing a jacket and sling. All through the book photographs, including pictures taken through the sights to show exactly what is being described, support the theory. The author also presents practice exercises that help demonstrate the

different techniques. For people looking to progress beyond indoor practice shooting, there is an explanation of types of competition, how to enter events, as well as introduction to competing outdoors and learning how to anticipate the effect of the wind on a shot. Whilst other shooting books may focus on the detailed skills used by those who compete at an international level, this book offers guidance for those at the beginner to intermediate levels. Foreword by Nick Clark. Essential reading for all newcomers to the sport and offers guidance for novice up to intermediate levels. Other shooting books focus on detailed

skills used by those who compete at international level. Observation Equipment danger flags. and Accessories. 164. The wind flags are made of different sizes, but the larger they are the better. A pennant 6 feet on the hoist and from 25 to 30 feet on the fly seems to give the greatest satisfaction. The point of a pennant will show light winds, and the size of the flag will give a better unit on which to base the force of the wind. 165. In the model rifle range (see frontispiece and chapter II, plate I, page 18-a) wind flags have been placed at every hundred yards at the dividing-line between the different sections of the range. This is a good rule to follow and will insure the range being properly flagged. One great trouble with

numbers of fine ranges is that there are not sufficient wind flags to give all men an equal chance of judging the wind. Of course, in the interest of economy it may be necessary to cut down this number slightly. In this case they might be placed at every 200 yards instead of every hundred, but we do not recommend that the flags be placed on lines of fire too widely separated. It is not well to have the flags separated by more than 300 feet. 166. In case the range is located in a section of country where there are peculiar currents coming from different directions, it may be well to place flags some distance from the range so as to give men an opportunity of catching a change of

wind before it strikes the range proper. Some ranges are not flagged with any attempt at regularity, but have flags placed where it is thought they will do the most good. This in order to save expense. This is not a wise plan to follow, but where only a few flags are to be used, they should be placed where there are...

It began with gold that had once belonged to Montezuma. Stolen and cached in a church in Mexico, it was recovered by two army officers who fled north for the French

settlements. Along the way one stabbed the other to death. The remaining officer was eventually killed by Plains Indians, but he buried the treasure just before he died. Now Ronan Chantry, a handful of trappers, and an Irish girl whose father was killed after telling her a few vague landmarks are searching for the lost treasure. But they are not alone. The girl's uncle, Rafen Falvey, wants it, too. Like Chantry, he is well educated, bold, and determined. Under different circumstances the two men might have been friends. But in all likelihood it wouldn't have made any difference. When it comes to gold, even friendship doesn't keep men from killing each other.
