Between Copernicus
and Galileo is the story
of Christoph Clavius,
the Jesuit astronomer
and teacher whose
work helped set the
standards by which
Galileo's famous claims

appeared so radical,
and whose teachings
guided the intellectual
and scientific agenda
of the Church in the
central years of the
Scientific Revolution.
Though relatively
unknown today,
Clavius was
enormously influential
throughout Europe in
the late sixteenth and
early seventeenth
centuries through his
astronomy books—the
standard texts used in

many colleges and universities, and the tools with which Descartes, Gassendi, and Mersenne, among many others, learned their astronomy. James Lattis uses Clavius's own publications as well as archival materials to trace the central role Clavius played in integrating traditional Ptolemaic astronomy and Aristotelian natural philosophy into an orthodox cosmology. Although Clavius strongly resisted the new cosmologies of Copernicus and Tycho, Galileo's invention of the telescope ultimately eroded the Ptolemaic world view. By tracing Clavius's views from medieval cosmology the seventeenth century, Lattis illuminates the conceptual shift from

Ptolemaic to Copernican astronomy and the social, intellectual, and theological impact of the Scientific Revolution.

Autour De La Lune BookRix

Jules Verne was born in 1828 in France. His dream was to write a new kind of novel, which combined scientific fact with fiction. Verne eventually wrote 40 novels in his Voyages extraordinaires series. "What one man can imagine, another will someday be able to achieve." Is a quote from an article in the Encyclopedia Britannica that sums up Verne so well. In All Around the Moon, three space travelers are conversing about science and mathematics. They

decide to alter the course of their projectile, which leads to unanticipated results. Extract: The moment that the great clock belonging to the works at Stony Hill had struck ten, Barbican, Ardan and M'Nicholl began to take their last farewells of the numerous friends surrounding them. The two dogs intended to accompany them had been already deposited in the Projectile. The three travellers approached the mouth of the enormous cannon, seated themselves in the flying car, and once more took leave for the last time of the vast throng standing in silence around them. The windlass creaked, the car started, and the three daring men disappeared in the

yawning gulf. The trap-hole giving them ready access to the interior of the Projectile, the car soon came back empty; the great windlass was presently rolled away; the tackle and scaffolding were removed, and in a short space of time the great mouth of the Columbiad was completely rid of all obstructions.

Trilogy of the Great War CreateSpace

L'uomo è realmente mai andato sulla Luna? Secondo Jules Verne sì: ci è stato nella seconda metà del XIX secolo. Con i due romanzi "Dalla Terra alla Luna" e "Intorno alla Luna", raccolti qui in un unico volume, lo scrittore francese si conferma più che mai il padre della moderna

fantascienza, per la capacità di immaginare e per certi versi ispirare il futuro. All'indomani della Guerra Civile americana, i membri di un'associazione di artiglieri, rimasti ormai inoperosi, decidono di mettere la loro esperienza balistica al servizio di nuovo ambizioso progetto: costruire un cannone gigantesco per inviare sulla Luna degli esploratori a bordo di un proiettile cavo. Riuscirà l'impresa di questo Apollo 11 ottocentesco?

Intorno alla luna

Independently Published
Around the Moon is one of the first books discussing space traveling from a scientific perspective. Written by Jules Verne in the 19th century, it

is a sequel to his first book "From the Earth to the Moon". This is an essential book of adventures that made history for the visionary talent of its author. A must-read for anyone interested in science fiction and adventures in space. This is the official edition in English without censorship, external additions, or changes to the original text.

A Tour of the Moon

Lindhardt og Ringhof
Around the Moon(1870), Jules Verne's sequel to From the Earth to the Moon, is a science fiction novel which continues the trip to the Moon which was only partially described in the previous novel. It was later combined with From the Earth to the Moon to create A

Trip to the Moon and Around It. From the Earth to the Moon and Around the Moon served as the basis for the film A Trip to the Moon. Fully illustrated. This is the 7th book in the Extraordinary Voyages Series.

Around the Moon, Jules Verne's sequel to From the Earth to the Moon, is a science fiction novel continuing the trip to the moon which left the reader in suspense after the previous novel. Having been fired out of the giant Columbiad space gun, the Baltimore Gun Club's bullet-shaped projectile, along with its three passengers, Barbicane, Nicholl and Michel Ardan, begins the five-day trip to the moon.

Intorno Alla Luna

Jules Verne

These memories,

handwritten by Elmo Cermaria (Nonno Peppe) for his grandson Checco (Francesco Nicolini), tell of when, as a young man of 20, he found himself hurled into the inferno of the First World War. In those days, you could cry your heart out for a bread roll denied, then miraculously regained thanks to the compassion of a German soldier, "the hated enemy". These recollections are terse, without a trace of rhetoric and devoid of recriminations. Nonno Peppe tells the facts just as he experienced them first hand, without expressing any condemnation of those responsible for them, even though an awareness of the large-scale massacre he witnessed transpires

from his account. When Nonno Peppe delivered the manuscript to his grandson on his wedding day, he asked him to make a promise: "Let the President of the Republic know what we did for Italy." A hundred years ago, whole generations of young Italian men were stripped of human honor and dignity. Only a few of these young men would live on and become our grandfathers; and only a few of us would be fortunate enough to become "grandchildren of the Great War" and bear witness to their ordeal.

All Around the Moon

Lector House

Around the Moon, also translated as Circling the Moon and All Around the Moon, is the sequel to Jules Verne's 1865 novel, From the Earth to the Moon. It's a science fiction tale which continues the trip to the moon that was only begun in the first novel.

All Around The Moon

(Illustrated) BookRix

Jules Verne was a French writer; born in Nantes, February 8, 1828. He was educated in his native town; studied law in Paris, where he devoted much attention to dramatic literature. His comedy, Les Pailles Rompues, was performed at the Gymnase in 1850, and Onze Tours de Liege followed. His fame rests upon his scientific

romances, which have a touch of extravagance in their treatment. His works, which are widely read, have been translated into English. Among his works are: Five Weeks in a Balloon (1870); A Journey to the Center of the Earth (1872); Twenty Thousand Leagues Under the Sea (1873); Meridiana, the Adventures of Three Englishmen and Three Russians in South Africa (1873); From the Earth to the Moon Direct in Ninety-seven Hours, Twenty Minutes, and a Trip Round It (1873); The Fur Country, or Seventy Degrees North Latitude (1874); Around the World in Eighty Days (1874); A Floating City and The Blockade Runners (1874); The English at the North Pole (1874); Dr. Ox's Experiment (1874); A Winter Amid the Ice (1875); The Mysterious Island (1875); The Survivors of the "Chancellor" (1875); Michael Strogoff, the Courier of the Czar (1876); The Child of the Cavern (1877); Hector Servadac, or the Career of a Comet (1877); Dick Sands, the Boy Captain (1878); Le Rayon Vert (1882); Kera-ban-le-teta (1883); L'Etoile du Sud (1884); Le Plays de Diamants (1884); Le Chemin de France (1887); Deux Ans de Vaccances (1888); Famille Sans Nom (1889); Caesar Cascabel (1890); Mathias Sautlorf (1890); Nord Contre Sud (1890); The Purchase of the North Pole (1890); Claudius Bombamac (1892); A Castle in the

Carpathians (1892).

Dalla Terra alla Luna
Fredonia Books (NL)
After being fired out of the giant Columbiad, the bullet-shaped projectile along with its three passengers, Barbicane, Nicholl and Michel Ardan, begins the five-day trip to the

moon. After a close collision with meteor the three astronauts discover that the gravitational force of this satellite has sent them into an orbit around the moon. As Barbicane, Ardan and Nicholl begin geographical observations with opera glasses. They gain spectacular views of Tycho, one of the greatest of all craters on the moon. But then the projectile begins to move slowly away from the moon, towards the 'dead point', a place of which the gravitational attraction of the moon and earth becomes equal. Michel Ardan then hits upon the idea of using the rockets fixed to the bottom of the projectile, but the rockets are fired too late and the projectile falls to the earth at a

speed of 115,200 miles per hour.

Alrededor de la luna

Edizioni Il Fiorino

Modena

Intorno alla Luna è un romanzo scritto da Jules Verne nel 1870, che fa da continuazione a Dalla Terra alla Luna, una delle più famose opere precorritrici della moderna fantascienza. La storia è il resoconto del viaggio sulla luna fatto da Barbicane, Nicholl e Michele Ardan, iniziato nel precedente romanzo. I tre astronauti hanno deciso di portare con loro due cani, viveri per un anno e sostanze che, tramite determinate reazioni chimiche, possono produrre ossigeno. Alle dieci vengono chiusi dentro l'obice metallico, calati nel cannone e

quarantasette minuti dopo, Murchison accenderà la miccia. Dentro è tutto ben legato e i tre avventurieri accendono il gas per la luce e si mettono comodi aspettando la partenza. All'ora prestabilita viene accesa la miccia e in un solo istante, con un boato terribile, il proiettile si alza in volo lasciandosi dietro un'enorme scia bianca. *All Around the Moon* E-text

Intorno alla Luna (in francese "Autour de la Lune"), edito anche come "Attorno alla luna", "Giro intorno alla Luna" e "Viaggio intorno alla Luna", è un romanzo scientifico del 1870 di Jules Verne che fa da continuazione a "Dalla Terra alla Luna" del 1865, una delle più famose opere precorritrici della moderna fantascienza. Animato dalla straordinaria suspense ritrovabile in molte opere del Verne, questo romanzo prefigura un'impresa poi effettivamente realizzata, la conquista della Luna. Tre uomini, Nicholl, Barbicane e Michele Ardan, hanno scelto di partire per la Luna, e il primo dicembre del 1865 il loro sogno sta per

realizzarsi. La costruzione mastodontica del proiettile e del cannone è stata ultimata e quella sera devono partire alla volta del satellite terrestre. I tre hanno deciso di portare con loro due cani, viveri per un anno e sostanze che, tramite determinate reazioni chimiche, possono produrre ossigeno. Alle dieci vengono chiusi dentro l'obice metallico, calati nel cannone e quarantasette minuti dopo, Murchison accenderà la miccia. Dentro è tutto ben legato e i tre avventurieri accendono il gas per la luce e si mettono comodi aspettando la partenza...
All Around the Moon (Illustrated) DigiCat

Around the Moon (French: *Autour de la Lune*, 1870), Jules Verne's sequel to *From the Earth to the Moon*, is a science fiction novel continuing the trip to the moon which left the reader in suspense after the previous novel. It was later combined with *From the Earth to the Moon* to create *A Trip to the Moon and Around It*. The three travelers undergo a series of adventures and misadventures during the rest of the journey, including disposing of the body of a dog out a window, suffering intoxication by gases, and making calculations leading them, briefly, to believe that they are to fall back to Earth. During the latter part of the voyage, it becomes apparent that

the gravitational force of their earlier encounter with the asteroid has caused the projectile to deviate from its course. The projectile enters lunar orbit, rather than landing on the moon as originally planned. Barbicane, Ardan and Nicholl begin geographical observations with opera glasses. The projectile then dips over the northern hemisphere of the moon, into the darkness of its shadow. It is plunged into extreme cold, before emerging into the light and heat again. They then begin to approach the moon's southern hemisphere. From the safety of their projectile, they gain spectacular views of Tycho, one of the greatest of all craters

on the moon. The three men discuss the possibility of life on the moon, and conclude that it is barren. The projectile begins to move away from the moon, towards the 'dead point' (the place at which the gravitational attraction of the moon and Earth becomes equal). Michel Ardan hits upon the idea of using the rockets fixed to the bottom of the projectile (which they were originally going to use to deaden the shock of landing) to propel the projectile towards the moon and hopefully cause it to fall onto it, thereby achieving their mission.

Edizioni Trabant
È il seguito di Dalla Terra alla Luna. Poco dopo la partenza il proiettile viene deviato per essere quasi venuto a contatto con un bolide. Tra discussioni scientifiche e momenti di conviviale serenità alternati ad altri di viva preoccupazione, la navicella con i tre protagonisti vola vicinissimo alla luna, permettendo di osservarla nei dettagli ma senza poter allunare; accendendo i razzi, che avrebbero

dovuto servire all'allunaggio, nel momento in cui la navicella è quasi ferma prima di decidere della sua futura traiettoria, l'equipaggio riesce invece a dirigersi nuovamente verso la terra fino a cadere nell'Oceano Pacifico.

All Around the Moon

Panamericana Editorial
 "Dalla Terra alla Luna" continua nel suo seguito "Intorno alla Luna" pubblicato cinque anni dopo la prima parte. I tre avventurieri iniziano il loro viaggio sulla luna sperando di sopravvivere e di riuscire a completare la loro missione.

Purtroppo, molte cose vanno storte. Si scopre che il missile ha cambiato rotta durante il loro viaggio e, mentre tentano di navigare e di correggere la rotta, la situazione peggiora ulteriormente quando il missile inizia a precipitare sulla Terra. Tutto sembra destinato a fallire, e le vite dei tre uomini sono in pericolo. Avranno almeno una possibilità di sopravvivere? Vivranno per raccontare ciò che hanno visto e vissuto, o la prima missione in assoluto per lasciare la Terra rimarrà avvolta nel mistero? Jules Verne (1828-1905) è stato un romanziere francese che ha scritto soprattutto narrativa d'avventura ispirata ai progressi scientifici del XIX secolo. Con l'aiuto

dell'editore Pierre-Jules Hetzel scrisse una serie di libri intitolata "Viaggi straordinari", che comprende "Viaggio al centro della terra" (1864), "Ventimila leghe sotto il mare" (1870) e "Il giro del mondo in ottanta giorni" (1873). Molto popolare sia tra i bambini che tra gli adulti, Verne è uno degli autori più tradotti di tutti i tempi e continua, anche oggi, a ispirare persone in tutto il mondo.
