Basic principles : "Sustainability" in context -- Principle 1 : Keep healthy sites healthy -- Principle 2 : Heal injured soils and sites -- Principle 3 : Favor living, flexible materials -- Principle 4 : Respect the waters of life -- Principle 5 : Pave less -- Principle 6 : Consider origin and fate of materials -- Principle 7 : Know the costs of energy over time -- Principle 8 : Celebrate light, respect darkness -- Principle 9 : Quietly defend silence -- Principle 10 : Maintain to sustain -- Principle 11 : Demonstrate performance, learn from failure -- Sustaining principles, evolving efforts.

Smart Growth Cambridge Scholars Publishing

This useful book outlines four key strategies for interpreting qualitative data: ethnomethodology; semiotics; dramaturgy; and deconstruction. To demonstrate, the author applies the techniques of each method to a single data set, highlighting the differences in results.

Strategies for Interpreting Qualitative Data Routledge

This book examines an intercultural translation of economics as an academic field from Western to post-Soviet university settings.

Earthscape Birkhäuser

Kongjian Yu and his office Turenscape are beyond doubt the foremost landscape architecture practice in China today. The vast scale of China and her apparently boundless growth have enabled Yu to test many ideas that are still largely theories in the Western world. His work - increasingly valued and appreciated in Europe and North America - has attained an extremely high and elegant level in both conception and execution. Kongjian Yu is known for his ecological stance, often against the resistance of local authorities. His guiding design principles are the appreciation of the ordinary and a deep embracing of nature, even in its potentially destructive aspects, such as floods. Among his most acclaimed projects are Houtan Park for Shanghai Expo, the Red Ribbon Park in Qinhuangdao, and Shipyard Park in Zhongshan. This book explores Yu's work in 11 essays by noted authors and documents 22 major projects extensively.

Mary at the Flower Festival CreateSpace

This book is an essential companion to *The Story Cookbook*, and provides a compendium of the varied and different ways stories can be analysed in research and inquiry. Drawing from a range of disciplines such as psychology, sociology and literature studies, this book is an invaluable guide for the researcher, consultant or professional keen to use storytelling as inquiry. Created itself as an iterative action inquiry, and sourced from an international assembly of contributors, the 29 chapters provide an array of ways to analyse stories including juxtaposition, circumambulation, strengths-analysis, grounded theory and thematic analysis approaches. Because of the detail in illuminating each analytical method, this book provides a rich diverse and valuable resource for making sense of stories.

The Loud Silence of Francine Green Laurel Leaf

Offers practical illustrations from different disciplines and perspectives, showing how researchers from various backgrounds deal with narrative data.

Reinventing Conservation Easements SAGE Publications, Incorporated

Business cards are a statement of identity. Capable of conveying much more than contact information, they represent the creativity or style of a company in a very portable format. As an historical artifact in the digital age, they are constantly in danger of obsolescence and only those that truly stand out are memorable. One way to achieve the note

Living On Vacation Sendpoints

Our attitude to nature has changed over time. This book explores the historical, literary and philosophical origins of the changes in our attitude to nature that allowed environmental catastrophes to happen. It presents a philosophical reflection on human societies' attitude to the environment, informed by the history of the concept of landscape and the role played by the concept of nature in the human imagination and features a wealth of examples from around the world to help understand the contemporary environmental crisis in the context of both the built and natural environment. Thinking Through Landscape locates the start of this change in human labour and urban elites being cut off from nature. Nature became an imaginary construct masking our real interaction with the natural world. The book argues that this gave rise to a theoretical and literary appreciation of landscape at the expense of an effective practical engagement with nature. It draws on Heideggerian ontology and Veblen's sociology, providing a powerful distinction between two attitudes to landscape: the tacit knowledge of earlier peoples engaged in creating the landscape through their work - "landscaping thought" - and the explicit theoretical and aesthetic attitudes of modern city dwellers who love nature while belonging to a civilization that destroys the landscape - "landscape thinking". This book gives a critical survey of landscape thought and theory for students, researchers and anyone interested in human societies' relation to nature in the fields of landscape studies, environmental philosophy, cultural geography and environmental history.

Varieties of Narrative Analysis Duke University Press

"Second edition of illustrated field guide to wild urban plants of the northeastern United States. Includes 158 main entries plus 64 secondary species-feature descriptive information including scientific name and taxonomic authority, common names, botanical family, life form, place of origin, and identification features. Each entry is accompanied by original full-color photographs by the author which show the plants' characteristics and growth forms in their typical habitats"--

Quantitative Narrative Analysis SAGE

This book compiles guidelines for assessing the suitability and vulnerability of landscape for renewable energy projects and provides a multilingual glossary of terms for discussing landscape and renewable energy production, equipping the reader with tools and strategies for garnering public participation in urban planning.

Narrative Policy Analysis Academy Press

Originally published in 1962, when Lefebvre was beginning his career as a lecturer in sociology at the University of Strasbourg, it established his position in the vanguard of a movement which was to

culminate in the events of May 1968. A classic analysis of the modern world using Marxist dialectic, it is a book which supersedes the conventional divisions between academic disciplines. With dazzling skill, Lefebvre moves from philosophy to sociology, from literature to history, to present a profound analysis of the social, political and cultural forces at work in France and the world in the aftermath of Stalin's death—an analysis in which the contours of our own "postmodernity" appear with startling clarity.

SAGE

The contributors to this volume propose strategies of urgent and vital importance that aim to make today's urban environments more resilient. Resilience, the ability of complex systems to adapt to changing conditions, is a key frontier in ecological research and is especially relevant in creative urban design, as urban areas exemplify complex systems. With something approaching half of the world's population now residing in coastal urban zones, many of which are vulnerable both to floods originating inland and rising sea levels, making urban areas more robust in the face of environmental threats must be a policy ambition of the highest priority. The complexity of urban areas results from their spatial heterogeneity, their intertwined material and energy fluxes, and the integration of social and natural processes. All of these features can be altered by intentional planning and design. The complex, integrated suite of urban structures and processes together affect the adaptive resilience of urban systems, but also presupposes that planners can intervene in positive ways. As examples accumulate of linkage between sustainability and building/landscape design, such as the Shanghai Chemical Industrial Park and Toronto's Lower Don River area, this book unites the ideas, data, and insights of ecologists and related scientists with those of urban designers. It aims to integrate a formerly atomized dialog to help both disciplines promote urban resilience.

Sustainable Landscape Construction, Third Edition SAGE

No matter where you are in the ARE process, you will benefit from this book. From deciding if taking the ARE is the right path for you to figuring out what to do after you've passed, *How to Pass the ARE* will give valuable information to help you move through the AREs towards becoming a Licensed Architect. In 120 pages, *How to Pass the Architecture Registration Exam*, takes a thorough look at the following topics: What the ARE is and how to wrap your head around it. Is taking the ARE even right for you? How to use all the study material. Dealing with failure. How to mentally think about the ARE. Understanding how you learn. How to break down multiple choice questions. Things to consider on testing day. How to survive the long-haul commitment of getting through 7 exams. Finishing the process and becoming licensed. If you're working full-time and trying to figure out how to fit the exam into your busy schedule, this book is DEFINITELY for you. Not only does *How to Pass the ARE* provide a realistic approach to taking and completing the ARE while working full-time, it also serves as a one-stop resource for real-life, practical guidance. Best of all, your investment in "*How to Pass the ARE*" will pay for itself many times over. Sure, there is a ton of free ARE information available out there. Halfway through my ARE's I started to realize that my time would be my most valuable resource. I guarantee that no other single resource will save you as much time as getting the comprehensive, experienced-based knowledge you need—all written by someone who has actually taken the exam and all in one place! But, you don't have to take my word for it. If you

purchase *How to Pass the ARE* and feel that it provided you no value, I will issue a full refund and apologize for wasting your time. Good luck on your journey toward becoming a Licensed Architect.

The Last Landscape Island Press

Questioning the traditional boundaries between cities, suburbs, countryside and wilderness, this issue of AD explores emergent types of public space in low-density environments. It describes this new form of urbanism: decentralised, in a constant process of expansion and contraction, not homogenous or necessarily low-rise, nor guided by one mode of development, typology or pattern. While functionally and programmatically dispersed, settlements operate as a form of urbanism; the place of collective spaces within them has yet to be defined and articulated. The physical transformation of the built environment on the one hand, and the change in our notion of the public on the other - due to globalisation, privatisation and segregation - call for renewed interpretations of the nature and character of public space. The concept of public space needs to be examined: replaced, re-created or adapted to fit these conditions. What is the place of the public in this form of urbanism, and how can architecture address the notion of common, collective spaces? What is the current sociopolitical role of such spaces? How does the form and use of these spaces reflect the conception of the public as a political (or non-political) body? And can architecture regain an active role in formulating the notion of the collective? These and other issues are addressed through essays, research projects and built work by distinguished writers such as Bruce Robbins, Albert Pope and Alex Wall, and Practitioners including Zvi Hecker, Vito Acconci, MUTOPIA, Manuel de Sola-Morales, Martha Rosler and Manuel Vicente in a search for new collective architectures within the dispersed city.

Designed Ecologies Walter de Gruyter

Little over a century ago, New York and Budapest were both flourishing cities engaging in spectacular modernization. By 1930, New York had emerged as an innovating cosmopolitan metropolis, while Budapest languished under the conditions that would foster fascism. Budapest and New York explores the increasingly divergent trajectories of these once-similar cities through the perspectives of both Hungarian and American experts in the fields of political, cultural, social and art history. Their original essays illuminate key aspects of urban life that most reveal the turn-of-the-century evolution of New York and Budapest: democratic participation, use of public space, neighborhood ethnicity, and culture high and low. What comes across most strikingly in these essays is New York's cultivation of social and political pluralism, a trend not found in Budapest. Nationalist ideology exerted tremendous pressure on Budapest's ethnic groups to assimilate to a single Hungarian language and culture. In contrast, New York's ethnic diversity was transmitted through a mass culture that celebrated ethnicity while muting distinct ethnic traditions, making them accessible to a national audience. While Budapest succumbed to the patriotic imperatives of a nation threatened by war, revolution, and fascism, New York, free from such pressures, embraced the variety of its people and transformed its urban ethos into a paradigm for America. Budapest and New York is the lively story of the making of metropolitan culture in Europe and America, and of the influential relationship between city and nation. In unifying essays, the editors observe comparisons not only between the cities, but in the scholarly outlooks and methodologies of Hungarian and American histories. This volume is a unique urban history. Begun under the unfavorable conditions

of a divided world, it represents a breakthrough in cross-cultural, transnational, and interdisciplinary historical work.

Creative Business Cards Weidenfeld & Nicolson

A conservation easement is a legal agreement between a property owner and a conservation organization, generally a private nonprofit land trust, that restricts the type and amount of development that can be undertaken on that property. Conservation easements protect land for future generations while allowing owners to retain property rights, at the same time providing them with significant tax benefits. Conservation easements are among the fastest growing methods of land preservation in the United States today. *Protecting the Land* provides a thoughtful examination of land trusts and how they function, and a comprehensive look at the past and future of conservation easements. The book: provides a geographical and historical overview of the role of conservation easements analyzes relevant legislation and its role in achieving community conservation goals examines innovative ways in which conservation easements have been used around the country considers the links between social and economic values and land conservation Contributors, including noted tax attorney and land preservation expert Stephen Small, Colorado's leading land preservation attorney Bill Silberstein, and Maine Coast Heritage Trust's general counsel Karin Marchetti, describe and analyze the present status of easement law. Sharing their unique perspectives, experts including author and professor of geography Jack Wright, Dennis Collins of the Wildlands Conservancy, and Chuck Roe of the Conservation Trust of North Carolina offer case studies that demonstrate the flexibility and diversity of conservation easements. *Protecting the Land* offers a valuable overview of the history and use of conservation easements and the evolution of easement-enabling legislation for professionals and citizens working with local and national land trusts, legal advisors, planners, public officials, natural resource managers, policymakers, and students of planning and conservation.

Current Challenges of Central Europe : Society and Environment Comstock Publishing Associates Quantitative Narrative Analysis focuses on the following issues: 1. the fundamental features of narrative (as a specific type of text genre with certain invariant linguistic properties); 2. how the invariant properties of narrative can be used to structure narrative information in ways that basic qualitative information can then be analyzed quantitatively (story grammars, or Subject-Action-Object and respective modifiers, such as Time and Space of Action); 3. reliability (and how the

Urban gardening and agriculture have become important elements of sustainable urban planning in the context of persistent urbanization amid limited resources. However, a consideration of the cultural-historical dimension has been lacking up to now. The editors present the first comprehensive outline of traditional forms of food production in cities to help preserve this valuable knowledge. On the basis of current research findings, they develop new perspectives and guidelines for recognizing traditional food production systems as an aspect of cultural heritage and for dealing with urban agriculture worldwide.

Resilience in Ecology and Urban Design Gower Publishing Company, Limited

She Who Tells a Story introduces the pioneering work of twelve leading women photographers from Iran and the Arab world: Jananne Al-Ani, Boushra Almutawakel, Gohar Dashti, Rana El Nemr, Lalla Essaydi, Shadi Ghadirian, Tanya Habjouqa, Rula Halawani, Nermine Hammam, Rania Matar, Shirin Neshat and Newsha Tavakolian. As the Middle East has undergone unparalleled change over the past twenty years, and national and personal identities have been dismantled and rebuilt, these artists have tackled the very notion of representation with passion and power. Their provocative images, which range in style from photojournalism to staged and manipulated visions, explore themes of gender stereotypes, war and peace and personal life, all the while confronting nostalgic Western notions about women of the Orient and exploring the complex political and social landscapes of their home regions. Enhanced with biographical and interpretive essays, and including more than 100 reproductions of photographs and film and video stills, this book challenges us to set aside preconceptions about this part of the world and share in the vision of a group of vibrant artists as they claim the right to tell their own stories in images of great sophistication, expressiveness and beauty.

Wild Urban Plants of the Northeast University of Pennsylvania Press

Analyzing Field Reality provides a new way of thinking about the analysis of fieldwork that will aid researchers in many disciplines. The book is not about the mechanics of fieldwork, but about how to convey the field's everyday realities and its members' common philosophical engagement -- it provides the researcher with a methodology for understanding meaning in the field.
