Then Einstein came along and explained the photoelectric effect by postulating light as the sum of little packets ("quanta") of energy. Thus were the word "photon" and the quantum theory of light born. QED: The Strange Theory of Light and Matter Richard P. Feynman In this theory, a photon is the light carrier with its strange features. The photon travels over all alternative paths from the source to the detector and here it is able to produce an interference pattern when the paths cross each other at an angle. In the graphical illustration all paths are drawn as straight lines.
