This thoughtful volume challenges widely accepted, traditionalist scientific notions of 'the academic' – prevalent in higher education institutions globally – in order to promote best practice, and redefine the field as accessible, inclusive and forward thinking. This book situates itself away from the dominant discourse on academia and eschews the common tropes that have proved prohibitive to furthering the field and research within. By releasing 'the academic' from the restrictive, narrow boundaries typically imposed, Representations of the Academic opens up a form of public sphere where the contributors bring together their innovative views to propose a new normative form. Chapters explore examples of good practice that demonstrate alternative ways of thinking and, in doing so, the book continues an emergent tradition of investigating the origins, nature and purposes of academic work at a time when critical values are under threat. The book will be of interest to students, academics and researchers in the fields of education, educational research and higher and professional education more broadly. Those involved with interdisciplinary and intercultural studies, ethics and values in research will also benefit from this volume.

This book provides a historical analysis of the Faculty of Nursing at the University of Calgary in contrast and comparison to the broader evolution of academic nursing in Canada. It addresses how the faculty has responded to important social trends and changes in health care policy and helps the reader to understand contemporary nursing issues. Starting with the dramatic changes in health care policy after the Second World War, it establishes the role of nursing education as pivotal to a growing health care industry. The book then moves on to describe the challenge of developing an identity for an academic unit within the larger academic and health care structure. This book will be of particular interest to anyone involved in women's studies as it represents a case study for broader women's issues within an academic environment.

While vast numbers of nurses across the globe contribute in all areas of healthcare delivery from primary care to acute and long-term care in community settings, there are significant differences in how they are educated, as well as the precise nature of their practice. This comprehensive handbook provides a research-informed and international perspective on the critical issues in contemporary nurse education. As an applied discipline, nursing is implemented differently depending on the social, political and cultural climate in any given context. These factors impact on education, as much as on practice, and are reflected in debates around the value of accredited programmes, and on-the-job training, apprenticeship, undergraduate and postgraduate pathways into nursing. Engaging with these debates amongst others, the authors collected here discuss how, through careful design and delivery of nursing curricula, nurses can be prepared to understand complex care processes, complex healthcare technologies, complex patient needs and responses to therapeutic interventions, and complex organizations. The book discusses historical perspectives on how nurses should be educated; contemporary issues facing educators; teaching and learning strategies; the politics of nurse education; education for advanced nursing practice; global approaches; and educating for the future. Bringing together leading authorities from across the world to reflect on past, present and future approaches to nurse education and nursing pedagogy, this handbook provides a cutting-edge overview for all educators, researchers and policy-makers concerned with nurse education.

 \*\*\* How good is the NHS, really? That is the question this book seeks to answer, as the health service emerges from the gravest crisis in its history with more money – but greater challenges – than ever before. During the pandemic, voters made extraordinary sacrifices to save the NHS from collapse. Thanks to these efforts and the dedication and bravery of the NHS workforce, hospitals were able to treat patients with coronavirus, but millions of others lost out. Now an exhausted and depleted NHS workforce faces a huge backlog. The gap between supply and demand for publicly funded healthcare has never been so wide. With record numbers waiting for treatment, the politicians' answer has been to spend ever more taxpayers' money. The question is whether throwing cash at the problem will work. Every day, millions of patients receive care that is fair, good or outstanding. In keeping with Nye Bevan's founding principles, the same treatment is available to rich and poor, free at the point of need. Public support for the concept remains overwhelming. Yet for every positive NHS experience there are negatives: care that is substandard, disjointed and arrives too late. A cult of secrecy surrounds errors and failings. Politicians on all sides dissemble and lie. This book seeks to strip away the spin and uncover the true state of the NHS: the good, the bad and the ugly. It explores an increasingly urgent question: in an era of pandemics, can the NHS provide the quality of service patients deserve?

This book provides a unique insight and background of a uro-oncology nurse's career from a personal and professional perspective, one that encapsulates the ever changing dynamics in the nursing profession over 40 years - 1970's to current, 2022. In writing this book, the objective is to devise a beneficial point of reference, one that is conducive to enlightening individuals within the healthcare profession and the wider context, on the art of reflection and acknowledging its benefits in terms of exploring their feelings and understanding their meaning. Reflection is a highly beneficial tool. In this context, the process enables the author to reflect constructively on her nursing career and practice, to highlight the positive as well as the negative aspects within that practice, and illustrate how the experiences gained have contributed to her development, personally and professionally, throughout that journey. Reflection includes deliberate reflection on experience, emotions, actions and responses and acknowledging how essential these have been to informing the author's existing knowledge base and in ensuring a higher level of learning and understanding. In the continued quest to deliver optimal healthcare, the objective of reflection is in enabling healthcare individuals e.g. nursing students, newly qualified nurses or those considering change of nursing speciality, to better understand their patients from a holistic standpoint (physical, psychological, psycho-social, spiritual, cultural and economic) and ultimately, improving the individual patient's overall experience – cancer or otherwise, as well as improving and enhancing practice outcomes. The importance of reflection and its contribution to increasing the healthcare professional's self-awareness – emotional, personal and professional, is also well underlined. Various Modules and Case Studies within the book are used to explain and highlight key issues, and to enhance content and visual acuity.

**Critical Resilience for Nurses** Mittal Publications

The nursing profession is under pressure. Financial demands, student debt, the target culture, political scrutiny in the wake of major care scandals and increasing workloads are all taking their toll on professional morale and performance. This timely book considers the meaning of resilience in this adverse context and explains why measures to preserve individual nurses' and students' well-being are flawed if they don't take into account wider political and organizational perspectives. Arguing that healthcare can be thought about and experienced differently, this book: provides a summary of the latest research on resilience, explaining its relevance and also limitations for nurses; considers debates about compassion and highlights the effects of policy agendas on nurse education and nursing work; re-evaluates nursing's professional identity, including where nursing has come from and the effects of class, gender and race on its powerbase; assesses the role of politics and social media, both in driving change and feeding resistance; and introduces the idea of critical resilience as a complete framework for resisting bullying and fostering survival and change in the nursing workforce. Direct, upbeat, at times provocative and witty, this agenda-setting book enables nurses to understand why they feel the way they do. It also lists what opportunities are available to them to change, resist and survive in what has become a complex, challenging – if still deeply rewarding – line of work.

What does the UK's exit from the EU mean for health and the NHS? This book explains the legal and practical implications of Brexit on the NHS: its staffing; especially on the island of Ireland; medicines, medical devices and equipment; and biomedical research. It considers the UK's post-Brexit trade agreements and what they mean for health, and discusses the effects of the COVID-19 pandemic on post-Brexit health law. To put the legal analysis in context, the book draws on over 400 conversations the authors had with people in the north of England and Northern Ireland, interviews with over 40 health policy stakeholders, details of a film about their research made with ShoutOut UK, the authors' work with Parliaments and governments across the UK, and their collaborations with key actors like the NHS Confederation, the British Medical Association, and Cancer Research UK. The book shows that the language people use to talk about hoped-for legitimate post-Brexit health governance suggests a great deal of faith in law and legal process among 'ordinary people', but the opposite from 'insider elites'. Not What The Bus Promised puts the authors' knowledge and experiences centre frame, rather than claiming to express 'objective reality'. It will be of interest to any reader who cares about the NHS and wants to understand its present and future.

To get the resources and respect they need, nurses have long had to be advocates for themselves and their profession, not just for their patients. For a decade, *From Silence to Voice* has provided nurses with the tools they need to explain the breath and complexity of nursing work. Bernice Buresh and Suzanne Gordon have helped nurses around the world speak up and convey to the public that nursing is more than dedication and caring-it demands specialized knowledge, expertise across a range of medical technologies, and decision-making about life-and-death issues. "Nurses and nursing organizations," they write, "must go out and tell the public what nurses really do so that patients can actually get the benefit of their expert care."--Amazon.com.

The National Health Service, or NHS, is the United Kingdom's national healthcare system. It oversees the public's health and ensures the medical wellbeing of the population of the UK. Governance network processes are complex because of the different nature of agendas and strategies of actors involved in health, but increasingly, because of the link between social and healthcare delivery, recent initiatives to provide a joined up or integrated approach have been presented. However, the extent of joined-up governance processes in the National Health Service is rather uneven. So far, reforms to try to improve the running of the NHS through the introduction of market mechanisms or increased decentralization have only served to exacerbate such tensions and resulted in further fragmentation of the public health system. *The NHS and Contemporary Health Challenges From a Multilevel Perspective* illustrates the complexities of governing public health services that are part of the NHS and takes an innovative approach by examining public health provision through a multiscale lens, which reveals significant limits of the current governance model. The book raises the various challenges that clinical staff, public authorities, and the general public face in the provision of healthcare to uphold core values inherent in health systems. While highlighting topics including health governance, patient satisfaction, and public health, this book is ideally designed for policymakers, government officials, healthcare administrators, hospital managers, healthcare researchers, medical professionals, and students.

Bringing together diverse approaches and case studies of international health worker migration, *Global Migration, Gender, and Health Professional Credentials* critically reimagines how we conceptualize the transfer of value embodied in internationally educated health professionals (IEHPs). This volume provides key insights into the economic and feminist concepts of global value transmission, the complexity of health worker migration, and the gendered and intersectional intricacies involved in the workplace integration of immigrant health care workers. The contributions to this edited collection uncover the multitude of actors who play a role in creating, transmitting, transforming, and utilizing the value embedded in international health migrants.
