Optical and Wireless Technologies New  
Delhi : Orient Longman  
This book features high-quality, peer-  
reviewed papers from the Fourth  
International Conference on Recent  
Advancements in Computer,  
Communication, and Computational  
Sciences (RACCCS 2021), held at  
Aryabhatta College of Engineering and  
Research Center, Ajmer, India, on August

20-21, 2021. Presenting the latest  
developments and technical solutions in  
computational sciences, it covers a variety  
of topics, such as intelligent hardware and  
software design, advanced  
communications, intelligent computing  
technologies, advanced software  
engineering, the web and informatics, and  
intelligent image processing. As such, it  
helps those in the computer industry and  
academia to use the advances in next-  
generation communication and  
computational technology to shape real-  
world applications.

The International Science Congress  
Association organized the 2nd  
International Science Congress (ISC-2012)  
with 'Science and Technology - Challenges  
of 21st Century' as its focal theme.  
ISC-2012 was divided in 20 sections. A  
total number of 800 Research Papers and  
1200 registrations from 23 countries all  
over the world have been received. They  
was mainly from Bangladesh, Bulgariya,  
Cameroun, France, Greece, Iran, Iraq,  
Kazakhstan, Korea, Lithuania, Malaysia,  
Nigeria, Nepal, Phillipines, Pakistan,

Mobile technologies have become a staple in society for their accessibility and diverse range of applications that are continually growing and advancing. Users are increasingly using these devices for activities beyond simple communication including gaming and e-commerce and to access confidential information including banking accounts and medical records. While mobile devices are being so widely used and accepted in daily life, and subsequently housing more and more personal data, it is evident that the security of these devices is paramount. As mobile applications now create easy access to personal information, they can incorporate location tracking services, and data collection can happen discreetly behind the scenes. Hence, there needs to be more security and privacy measures enacted to ensure that mobile technologies can be used safely. Advancements in trust and privacy, defensive strategies, and steps for

securing the device are important foci as mobile technologies are highly popular and rapidly developing. The Research Anthology on Securing Mobile Technologies and Applications discusses the strategies, methods, and technologies being employed for security amongst mobile devices and applications. This comprehensive book explores the security support that needs to be required on mobile devices to avoid application damage, hacking, security breaches and attacks, or unauthorized accesses to personal data. The chapters cover the latest technologies that are being used such as cryptography, verification systems, security policies and contracts, and general network security procedures along with a look into cybercrime and forensics. This book is essential for software engineers, app developers, computer scientists, security and IT professionals, practitioners, stakeholders, researchers, academicians, and students interested in how mobile technologies and applications are implementing security protocols and tactics amongst devices. Annual Report Abhishek Publications  
This book comprises select proceedings of

the 5th International Conference on Optical and Wireless Technologies (OWT 2021). The contents of this book focus on research carried out in optical communication, optoelectronics, optics, wireless communication, wireless networks, sensors, mobile communications, and antenna and wave propagation. The book also explores the combined use of various optical and wireless technologies in next-generation applications and their latest developments in the applications such as photonics, high-speed communication systems and networks, visible light communication, nanophotonics, and wireless and MIMO systems. This book serves as a reference to scientists, academicians, engineers, and policy-makers interested in the field of optical and wireless technologies.

This book covers latest information on organic and inorganic waste management, and how the waste can be utilized as an energy source. An increasing world population and climate change rate hint that environmental health needs a sustainable waste recycling system

myths often wrongly associated with gender. The ideas in the presented papers highlight gender-based discriminations, ask important questions and share facts that encompass beyond the so-called boundary lines. The authors contributed on various topics including but not limited to violence, crime, discrimination, and abuse against women and LGBTQ+ community. The basic motive of the presented book is to incorporate ideas and contribute to the sensitization and education about the important yet often neglected issues of gender equality. Thus, this book proves to be an essential resource for educators and researchers working in the field of gender studies. The work presents challenges caused due to COVID-19, social media, popular culture and work-life balance and explores empowerment through law, skills, technology and media. Some interesting

case studies highlighted gender discrimination in science, sports and law. A variety of papers on literary texts were examined from a gender lens. The proceeding is divided into five subsections: 1. law, 2. literature, 3. management, 4. sociology and 5. social studies. The proceeding provides a wider perceptive and visuals about the scenarios which needs attention. The ideas presented will be helpful for achieving the sustainable development goal of gender equity to a greater extent.

This book presents selected papers from 1st International Conference on Optical and Wireless Technologies, providing insights into the analytical, experimental, and developmental aspects of systems, techniques, and devices in these spheres.

It explores the combined use of various optical and wireless technologies in next-generation networking applications, and discusses the latest developments in applications such as photonics, high-speed communication systems and networks, visible light communication, nanophotonics, and wireless and multiple-input-multiple-output (MIMO) systems. The book will serve as a valuable reference resource for academics and researchers across the globe.
