Fundamentals of Investment
Management McGraw-Hill Education

The best-selling Fundamentals of Corporate Finance (FCF) has three basic themes that are the central focus of the book: 1) An emphasis on intuition—the authors separate and explain the principles at work on a common sense, intuitive level before launching into any specifics. 2) A unified valuation approach—net present value (NPV) is

treated as the basic concept underlying corporate finance. 3) A managerial focus—the authors emphasize the role of the financial manager as decision maker, and they stress the need for managerial input and judgment. The Tenth Edition continues the tradition of excellence that has earned Fundamentals of Corporate Finance its status as market leader. Every chapter has been updated to provide the most current examples that reflect corporate finance in today's world. The supplements package has been updated and improved, and with the enhanced Connect Finance and Excel

Corporate Finance, by Ross, Westerfield, and Jaffe emphasizes the modern fundamentals of the theory of finance, while providing contemporary examples to make the theory come to life. The

authors aim to present corporate finance as the working of a small number of integrated and powerful intuitions, rather than a collection of unrelated topics. They develop the central concepts of modern finance: arbitrage, net present value, efficient markets, agency theory, options, and the trade-off between risk and return, and use them to explain corporate finance with a balance of theory and application. The Tenth Edition includes many exciting new research findings as well as an enhanced Connect Finance, now with even more student learning resources. Connect is the only integrated learning system that empowers students by continuously adapting to deliver precisely what they need, when they need it, and how they need it, so that

your class time is more engaging and effective.

Fundamentals of Investments was written to: 1. Focus on students as investment managers, giving them information they can act on instead of concentrating on theories and research without the proper context. 2. Offer strong, consistent pedagogy, including a balanced, unified treatment of the main types of financial investments as

mirrored in the investment world. 3. Organize topics in a way that makes them easy to apply--whether to a portfolio simulation or to real life--and support these topics with hands-on activities. The approach of this text reflects two central ideas. First, there is a consistent focus on the student as an individual investor or investments manager. Second, a consistent, unified treatment of the four basic types of financial instruments--stocks, bonds, options, and futures--focusing on their characteristics and features, their risks and returns, and the markets in which they trade.

A runaway train is racing toward five men who are tied to the track. Unless the train is stopped, it will inevitably kill all five men. You are standing on a footbridge looking down on the unfolding disaster. However, a fat man, a stranger,

is standing next to you: if you push him off the bridge, he will topple onto the line and, although he will die, his chunky body will stop the train, saving five lives. Would you kill the fat man? The question may seem bizarre. But it's one variation of a puzzle that has baffled moral philosophers for almost half a century and that more recently has come to preoccupy neuroscientists, psychologists, and other thinkers as well. In this book, David Edmonds, coauthor of the best-selling Wittgenstein's Poker, tells the riveting story of why and how philosophers have struggled with this ethical dilemma, sometimes called the trolley problem. In the process, he provides an entertaining and informative tour through the history of moral philosophy. Most people feel it's wrong

to kill the fat man. But why? After all, in taking one life you could save five. As Edmonds shows, answering the question is far more complex--and important--than it first appears. In fact, how we answer it tells us a great deal about right and wrong.
