"Creativity and innovation are to events, what the heart and soul are to the living." The book aims at encouraging readers to capture the traits and develop skills for enhancing their creative and innovative capabilities, cultivating the culture of creativity and innovation. Creativity is inventiveness with new ideas; critical thinking is generating and selecting ideas; and innovation turns creativity into products, processes and services. Creativity + Critical thinking + Innovation = Path of Desired Change The primary difference between creativity and innovation is that the former refers to conceiving a new idea while the latter involves converting that idea into a marketable commodity. Creativity and innovation are an attempt to gain a competitive advantage. Organizations are now focusing on enhancing their employees' creativity and not merely developing their technical competencies and skills. Undoubtedly, creativity is the most important human resource of all without which there would be no progress, and we would be forever repeating the same patterns.

Innovation is at the heart of all successful companies.

The use of bibliometrics for the analysis of technology management is on the rise in our increasingly technological societies. Many are using these tools to document or record the rise of various technologies, making it necessary to take stock of the value and application of scientometric methods and their

measures. Innovation Discovery shows the current state of play within the field of management of technology, and discusses how we can use networks to explore, understand and generate theory around the innovation process. It looks at the different streams of analysis used to understand bibliometric data, and presents alternative and novel ways of applying these techniques. Written as a comprehensive review of approaches by leading researchers in the field, this book is suitable for graduate and post-graduate students and researchers looking to expand their knowledge and embark on further investigations in technology management.

Contents: Part 1: Bibliometrics: The Case of Comparing an Ecosystem Using System and Network Approaches (Marco Tregua, Anna D'Auria, Tiziana Russo Spena, and Francesco Bifulco) Bibliometrics and Patents: Case of Forecasting of Biosensor Technologies for Emerging Point-of-Care and Medical IoT Applications (Nasir Jamil Sheikh, and Omar Sheikh) Patents: The Case of Exploitation of the Patent System Among SMEs and Private Inventors in Finland (J Talvela, M Karvonen, and T Kässi) Patents: Case of Analyzing Technological Knowledge Diffusion Among Technological Fields Using Patent Data: The Example of Microfluidics (Zheng Qiao, Lu-Cheng Huang, Fei-Fei Wu, Dan Wu, and Hui Zhang) Part 2: Patents and Networks: Case of Discerning the Evolutionary Nature of Technological Change in the Complex Product Industry (Fei Yuan and Kumiko Miyazaki) Patents and Networks: Case of Identification of Core Industry Actors for Electric Vehicle Battery by Application of Knowledge Flow (Yuan Yuan Shi and Tugrul Daim) Patents and Networks: Case of Social Network Analysis for Innovation (Antonello Cammarano, Mauro Caputo, Emilia Lamberti, and Francesca Michelino) Patents and Networks: Case of Cochlear Implant Technology Evolution Using Patent Classification Data (Srigowtham Arunagiri and Mary Mathew) Part 3: Bibliometrics and Networks: Case of a Multinational Perspective on How Eco-Innovation has Evolved in Academic Literature (Blanca de-Miguel-Molina, María de-Miguel-Molina, María-del-Val Segarra-Oña, and Ángel Peiró-Signes) Bibliometrics and Social Network Analysis Supporting the Research Development of Emerging Areas: Case Studies from Thailand (Nathasit Gerd Sri and Alisa Kongthon) Bibliometrics and Networks: Trends and Typology of Emerging Antenna Propagation Technologies (Yasutomo Takano, Yuya Kajikawa, and Makoto Ando) Bibliometrics and Networks: Case of Project Management and the Emergence of a Knowledge-Based Discipline (Alan Pilkington, Kah-Hin Chai, and Le Yang) Part 4: Emerging Networking Methods: Innovation Intermediaries in Technological Alliances (Calvin S Weng) Emerging Networking Methods: Analysing Funding Patterns and Their Evolution in Two Medical Research Topics (Blanca de-Miguel-Molina, Scott W Cunningham, and Fernando Palop) Part 5: Advanced Methods: Identifying the Technology Profiles of R&D Performing Firms — A Matching of R&D and Patent Data (Peter Neuhäusler, Rainer Frietsch, Carolin Mund, and Verena Eckl) Advanced Methods: Identification of Promising High-Tech Solutions with Semantic Technologies: Energy, Pha

The years since the global financial crisis have seen something of a renaissance in the manufacturing industry. The United States has launched its Advanced Manufacturing Partnership, and China owes much of its spectacular economic boom in the last decades to its being the 'world's factory'. Is there room for the EU in this landscape? This timely new book explores Europe's role in this evolving environment. It argues that on the one hand, in terms of sheer numbers, the role of the manufacturing industry in the EU is on a par with other major global economies. However, the book also states that Europe falls short of its global competitors (the

USA in particular) in terms of its involvement in the most innovative manufacturing sectors. The volume therefore argues that this creates the opportunity for a new European industrial policy. Exploring the development of current EU policy, the book puts forward suggestions as to how the EU can improve in terms of the competitiveness of its technology policy. Placing the EU's position in the context of the industrial structures of the USA, Japan and the BRICs, the book blends theoretical models and practical examples in order to offer a the state of the art look at the current and future direction of Europe's industrial policy. This book will be of relevance to all those with an interest in European economics, industrial economics, public policy, European politics and European studies.

A comprehensive and practical guide to Windows Server 2016 About This Book In-depth coverage of new features of Windows Server 2016 Gain the necessary skills and knowledge to design and implement Microsoft Server 2016 in enterprise environment Know how you can support your medium to large enterprise and leverage your experience in administering Microsoft Server 2016, A practical guide to administering Windows server 2016 Who This Book Is For The book is targeted at System Administrators and IT professionals who would like to design and deploy Windows Server 2016 (physical and logical) Enterprise infrastructure. Previous experience of Windows Server operating systems and familiarity with networking concepts is assumed. System administrators who are upgrading or migrating to Windows Server 2016 would also find this book useful. What You Will Learn Familiarize yourself with Windows Server 2016 ideology, the core of most datacenters running today New functions and benefits provided only by the new Windows Server 2016 Get comfortable working with Nanoserver Secure your network with new technologies in Server 2016 Harden your Windows Servers to help keep those bad guys out! Using new built-in integration for Docker with this latest release of Windows Server 2016 Virtualize your datacenter with Hyper-V In Detail Windows Server 2016 is the server operating system developed by Microsoft as part of the Windows NT family of operating systems, developed concurrently with Windows 10. With Windows Server 2016, Microsoft has gotten us thinking outside of the box for what it means to be a system administration, and comes with some interesting new capabilities. These are exciting times to be or to become a server administrator! This book covers all aspects of administration level tasks and activities required to gain expertise in Microsoft Windows Server 2016. You will begin by getting familiar and comfortable navigating around in the interface. Next, you will learn to install and manage Windows Server 2016 and discover some tips for adapting to the new server management ideology that is all about centralized monitoring and configuration. You will deep dive into core Microsoft infrastructure technologies that the majority of companies are going to run on Server 2016. Core technologies such as Active Directory, DNS, DHCP, Certificate Services, File Services, and more. We will talk about networking in this new operating system, giving you a networking toolset that is useful for everyday troubleshooting and maintenance. Also discussed is the idea of Software Defined Networking. You will later walk through different aspects of certificate administration in Windows Server 2016. Three important and crucial areas to cover in the Remote Access role -- DirectAccess, VPN, and the Web Application Proxy -- are also covered. You will then move into security functions and benefits that are available in Windows

Server 2016. Also covered is the brand new and all-important Nano Server! We will incorporate PowerShell as a central platform for performing many of the functions that are discussed in this book, including a chapter dedicated to the new PowerShell 5.0. Additionally, you will learn about the new built-in integration for Docker with this latest release of Windows Server 2016. The book ends with a discussion and information on virtualizing your datacenter with Hyper-V. By the end of this book, you will have all the ammunition required to start planning for and implementing Windows Server 2016. Style and approach This book offers a practical and wide coverage of all features of brand new Microsoft Server 2016 along with tips on daily administration tasks.

The aim of this book is to present selected theoretical and practical aspects of corporate social responsibility and sustainability, with particular emphasis on the journey (transition) from values to impact. Values play an important role in business world and they shape the responsible approach of organizations. However, pressing and still unresolved challenges of the present day show evidently that there exist significant discrepancies between organizations declarations on values and their real impact. COVID-19 pandemic, Globalization 4.0, climate catastrophe and challenges emphasized by SDGs, constitute the new environment that contemporary organizations face. In effect business is part of the problem and a solution as well. It is necessary to quickly and effectively push for action taking into account the power of responsible business to co-create human live and environment. Both the theoretical considerations and the practice-based studies presented in this monograph make a significant contribution to the theory and practice of management. The book is an extension and enrichment of the existing knowledge in the field of socially responsible management in organizations. Corporate Social Responsibility and Sustainability will be of value to academics, researchers and advanced students in the fields of business and management, especially those interest in the intersection of management and CSR and sustainability, and those focusing the impact that business activities have on the environment.

Why every child needs to learn to code: the shift from “computational thinking” to computational participation. Coding, once considered an arcane craft practiced by solitary techies, is now recognized by educators and theorists as a crucial skill, even a new literacy, for all children. Programming is often promoted in K-12 schools as a way to encourage “computational thinking”—which has now become the umbrella term for understanding what computer science has to contribute to reasoning and communicating in an ever-increasingly digital world. In *Connected Code*, Yasmin Kafai and Quinn Burke argue that although computational thinking represents an excellent starting point, the broader conception of “computational participation” better captures the twenty-first-century reality. Computational participation moves beyond the individual to focus on wider social networks and a DIY culture of digital “making.” Kafai and Burke describe contemporary examples of computational participation: students who code not for the sake of coding but to create games, stories, and animations to share; the emergence of youth programming communities; the practices and ethical challenges of remixing (rather than starting from scratch); and the move beyond stationary screens to programmable toys, tools, and textiles.

This second volume of papers from the ATC21STM project deals

with the development of an assessment and teaching system of 21st century skills. Readers are guided through a detailed description of the methods used in this process. The first volume was published by Springer in 2012 (Griffin, P., McGaw, B. & Care, E., Eds., *Assessment and Teaching of 21st Century Skills*, Dordrecht: Springer). The major elements of this new volume are the identification and description of two 21st century skills that are amenable to teaching and learning: collaborative problem solving, and learning in digital networks. Features of the skills that need to be mirrored in their assessment are identified so that they can be reflected in assessment tasks. The tasks are formulated so that reporting of student performance can guide implementation in the classroom for use in teaching and learning. How simple tasks can act as platforms for development of 21st century skills is demonstrated, with the concurrent technical infrastructure required for its support. How countries with different languages and cultures participated and contributed to the development process is described. The psychometric qualities of the online tasks developed are reported, in the context of the robustness of the automated scoring processes. Finally, technical and educational issues to be resolved in global projects of this nature are outlined.

Streamlined ID: A Practical Guide to Instructional Design presents a focused and generalizable approach to instructional design and development – one that addresses the needs of ID novices, as

well as practitioners in a variety of career environments. Emphasizing the essentials and "big ideas" of ID, *Streamlined ID* presents a new perspective – one that aims to produce instruction that is sustainable, optimized, appropriately redundant, and targeted at continuous improvement. The book features an enhanced version of the classic ADDIE model (Analysis, Design, Development, Implementation, and Evaluation) that emphasizes the iterative nature of design and the role of evaluation throughout the design/development process. It clearly lays out a systematic approach that emphasizes the use of research-based theories, while acknowledging the need to customize the process to address a variety of pedagogical approaches: Instructivist, Constructivist, and Connectivist. The book opens with an overview of the basics of ID and each subsequent chapter describes major activities in the ID process with step-by-step instructions and tips for streamlining the process. Numerous job aids serve to maximize the efficiency and effectiveness of your design efforts. Each chapter highlights key concepts and provides additional exercises and assignments based on the work of Benjamin Bloom. *Streamlined ID* is an ideal reference guide for optimizing professional practice.

Learning to Solve Problems is a much-needed book that describes models for designing interactive learning environments to support how to learn and solve different kinds of problems. Using a research-based approach, author David H. Jonassen? a recognized expert in the field? shows how to design instruction to support three kinds of problems: story problems, troubleshooting, and case and policy analysis problems. Filled with models and job aids, this book describes different approaches for representing problems to learners and includes information about technology-based tools that can help learners mentally represent problems for themselves. Jonassen also explores methods for associating different solutions to problems and discusses various processes for reflecting on the problem solving process. *Learning to Solve Problems* also includes three methods for assessing problem-solving skills? performance assessment, component skills; and argumentation.
