Social media is popularly seen as an important media for people with disability in terms of communication, exchange and activism. These sites potentially increase both employment and leisure opportunities for one of the most traditionally isolated groups in society. However, the offline inaccessible environment has, to a certain degree, been replicated online and particularly in social networking sites. Social media is becoming an increasingly important part of our lives yet the impact on people with disabilities has gone largely unscrutinised. Similarly, while social media and disability are often both observed through a focus on the Western, developed and English-speaking world, different global perspectives are often overlooked. This collection explores the opportunities and challenges social media represents for the social inclusion of people with disabilities from a variety of different global perspectives that include Africa, Arabia and Asia along with European, American and Australasian perspectives and experiences.

Due to changes in the learning and research environment, changes in the behavior of library users, and unique global disruptions such as the COVID-19 pandemic, libraries have had to adapt and evolve to remain up-to-date and responsive to their users. Thus, libraries are adding new, digital resources and services while maintaining most of the old, traditional resources and services. New areas of research and inquiry in the field of library and information science explore the applications of machine learning, artificial intelligence, and other technologies to better serve and expand the library community. *The Handbook of Research on Knowledge and Organization Systems in Library and Information Science* examines new technologies and systems and their application and adoption within libraries. This handbook provides a global perspective on current and future trends concerning library and information science. Covering topics such as machine learning, library

management, ICTs, blockchain technology, social media, and augmented reality, this book is essential for librarians, library directors, library technicians, media specialists, data specialists, catalogers, information resource officers, administrators, IT consultants and specialists, academicians, and students.

In the field of health, digital health has assumed significant importance in recent years due to its contribution to enhancing the overall healthcare system performance in terms of alleviating the ever-growing pressure on the healthcare system, reducing healthcare costs, improving working conditions and job satisfaction of health professionals, improving patients' satisfaction, and providing a holistic view of patient health through access to data and giving patients more control over their health. Therefore, it is of vital importance to understand the overwhelming possibilities and promise it can offer for better health services. Similarly, exploring barriers to digital health engagement is an important tool to guarantee an effective adoption and transition that can meet all healthcare stakeholders' objectives. *Integrating Digital Health Strategies for Effective Administration* explores recent writings and original research findings in the field of digital health with a special focus on digital health adoption strategies and challenges. This book is intellectually situated between digital health management and digital health technologies. Covering topics such as digital health literacy, machine learning, and procedural law, this premier reference source is an essential resource for app developers, healthcare administrators, healthcare professionals, students and educators of higher education, researchers, and academicians.

Research that is based on appropriate theoretical or conceptual frameworks ensures valid and credible research objectives and the production of relevant results that complement existing literature on a research problem. Innovative and relevant knowledge is produced using appropriate theories and concepts. Despite the importance of theoretical and conceptual frameworks to research, many researchers have difficulties applying them appropriately in their research. Researchers in information systems have limited exposure to theories of societal and human development that should guide them in applying their knowledge of information systems to address real-world problems. *Theoretical and Conceptual Frameworks in ICT Research* presents a collection of practical case applications of theoretical and conceptual frameworks in information systems research. It guides researchers of information systems to explore and use appropriate theoretical frameworks. This book further tests different theories and frameworks and recommends their effectiveness and improvement and identifies context-specific theoretical and conceptual frameworks. Covering topics such as decision electronic health record implementation, institution management, and technology adoption, this premier reference source is an essential resource for policymakers, educators and advanced-level students of higher education, information systems professionals, librarians, researchers, and academicians.

This volume brings together both theoretical and case study based contributions to the implementation of the Sustainable Development Goals (SDGs) in Institutions of Higher Education (IHE), presenting an impactful combination of authors from both developing and developed countries. While most current publications addressing the SDGs and education focus on sustainable development in general and specific topics such as climate change or energy, this book attempts to accelerate the localisation of the SDGs by presenting opportunities and innovations offered in various universities and campuses regarding SDGs localisation. The book seeks to provide an important contribution to the global dialogue on IHE and the SDGs, and will be of interest to academics and researchers engaged in the SDGs and education, as well as government agencies and other interested stakeholders. The book focuses on curriculum and learning matters, research and development as well as community engagement. Case studies detail the integration of SDGs in academic and professional development, new approaches to implementing sustainability science instruction, improvements in teaching practices to enhance teacher competence, and responsible management education. Additional focus is placed on the alignment of the SDGs in higher education with the other goals, emphasizing technological innovation for improved human health and environmental management, and climate change policies and action plans. Interdisciplinary solutions for pressing environmental problems are also provided, making sure that no one is left behind in realising these global development goals.

This book captures ground-breaking attempts to utilise culture in territorial development and regeneration processes in the context of South Africa and our 'new normal' brought by COVID-19, the fourth industrial revolution, and climate change the world over. The importance of culture in rural-urban revitalisation has been underestimated in South Africa and the African continent at large. Despite some cultural initiatives that are still at developmental stages in big cities, such as Johannesburg, eThekweni and Cape Town, there is concern about the absence of sustainable policies and plans to support culture, creativity, and indigenous knowledge at national and municipal levels. Showcasing alternative strategies for making culture central to development, this book discusses

opportunities to shift culture and indigenous knowledge from the peripheries and place them at the epicentre of sustainable development and the mainstream of cultural planning, which can then be applied in the contexts of Africa and the Global South. Governmental institutions, research councils, civil society organisations, private sector, and higher education institutions come together in a joint effort to explain the nexus between culture, economic development, rural-urban linkages, grassroots and technological innovations. *Culture and Rural-Urban Revitalization in South Africa* is an ideal read for those interested in rural and urban planning, cultural policy, indigenous knowledge and smart rural village model.

It is common knowledge that development without security is like a runaway horse. Yet, development in Africa has been plagued by insecurities since the extractive periods of slave trade and colonialism. In spite of political independence and the euphoria of sovereignty as states, Africa has failed to address insecurity, which continues to loom large and to threaten aspirations towards truly inclusive and sustainable development. A consequence has been Africa's development naivety vis-à-vis the monopolisation of development by the predatory elite actors of the global North and their local facilitators. To salvage the continent from such predation and the insecurities engendered requires novel and innovative imagination and praxis. This book draws from both the haunted landscapes and bitter memories of past exploitations and from the feeding of the insatiable North with African resources and humanity. It brings together essays by a concerned generation of scholars driven by the urgent need for radical decolonisation of African development and its legacies of insecurities. It is handy to students and practitioners in economics, policy studies, political science, development studies, global and African studies.

There has been a growth in the use, acceptance, and popularity of indigenous knowledge. High rates of poverty and a widening economic divide is threatening the accessibility to western scientific knowledge in the developing world where many indigenous people live. Consequently, indigenous knowledge has become a potential source for sustainable development in the developing world. *The Handbook of Research on Theoretical Perspectives on Indigenous Knowledge Systems in Developing Countries* presents interdisciplinary research on knowledge management, sharing, and transfer among indigenous communities. Providing a unique perspective on alternative knowledge systems, this publication is a critical resource for sociologists, anthropologists, researchers, and graduate-level students in a variety of fields.

This book examines the dynamics underpinning the implementation of Zimbabwe's fast track land reforms. By utilising ethnographic data gathered in central Zimbabwe, the book goes beyond the polarised debates which dominated scholarship in the earlier period to highlight the changing livelihoods occasioned by the land reform. The book argues that despite the challenges faced by the newly resettled farmers, the land reform has allowed landless and land-short peasants access to land and other natural resources which were previously enclosed to them under a bi-modal agrarian structure inherited from colonialism.

Master's Thesis from the year 2016 in the subject Tourism, grade: 2.1, , course: Tourism

Management, language: English, abstract: It is widely agreed that the recent history of economic crisis in Zimbabwe had negative effects on tourism in the country. Soon after a decade of political and economic instability, Zimbabwe is faced with several challenges to position the destination in an increasingly competitive global marketplace and to create a unique identity to differentiate itself from competitors. Thus destination branding can be a strategic marketing component with considerable importance in promoting the discovery of the country severely impacted by a volatile economic and political environment. This study sought to develop a destination branding framework for tourism development in Zimbabwe based on stakeholders' perspectives. The underpinning objectives were, to determine the nature of Zimbabwe's tourism destination brand, to establish the tourism destination branding process in Zimbabwe, to identify the benefits of destination branding for tourism stakeholders in Zimbabwe, to identify the development preferences about destination branding in Zimbabwe and to determine the destination branding support strategies for tourism development in Zimbabwe. A positivist philosophy was adopted for the study with a quantitative approach. The study made use of a cross-sectional survey design with a sample of 417 randomly selected tourism stakeholders. Data were analysed in SPSS with AMOS for structural equation modelling. Major findings indicate that, the nature of a tourism brand, destination branding process and branding benefits have a positive influence on stakeholder preferences about destination branding. Ultimately stakeholder preferences about destination branding have a positive influence on support strategies for destination branding. A framework was proposed basing on these findings. This framework may contribute to creating and integrating a value added destination brand to enhance tourism development in Zimbabwe. More importantly, the research findings may help Destination Management Organisations, tourism planners and policy-makers to understand what tourism stakeholders prefer in developing the country's brand and to plan and implement sound destination branding strategies.

Hope Deferred asks the question: How did Zimbabwe, a country with so much promise—a stellar education system, a growing middle class, a sophisticated economic infrastructure, a liberal

constitution, and an independent judiciary—come so close to collapse? In their own words, Zimbabweans tell their stories of losing their homes, land, livelihoods, and families as a direct result of political violence. They describe being tortured in detention, firebombed at work, or beaten up or raped to “punish” votes for the opposition. Those forced to flee to neighboring countries recount their escapes: cutting through fences, swimming across crocodile-infested rivers, and entrusting themselves to human smugglers. This book includes. Zimbabweans of every age, class, and political conviction—from farm laborers and academics to doctors and artists—ordinary people surviving the fragmentation of a once-thriving nation.

From consumer products to architecture to advertising to digital technology, design is an undeniably global phenomenon. Yet despite their professed transnational perspective, historical studies of design have all too often succumbed to a bias toward Western, industrialized nations. This diverse but rigorously curated collection recalibrates our understanding of design history, reassessing regional and national cultures while situating them within an international context. Here, contributors from five continents offer nuanced studies that range from South Africa to the Czech Republic, all the while sensitive to the complexities of local variation and the role of nation-states in identity construction.

The nanotech revolution waits for no man, woman...or child. To revitalize science, technology, engineering, and mathematics (STEM) performance, the U.S. educational system requires a practical strategy to better educate students about nanoscale science and engineering research. This is particularly important in grades K-12, the effective gestation point for future ideas and information. Optimize your use of free resources from the National Science Foundation The first book of its kind, Nanoscience Education, Workforce Training, and K-12 Resources promotes nano-awareness in both the public and private sectors, presenting an overview of the current obstacles that must be overcome within the complex U.S. educational system before any reform is possible. It's a race against time—and other countries—and the fear is that U.S. students could lag behind for decades, with ineffective teaching and learning methods handicapping their ability to compete globally. Focusing on the application of new knowledge, this concise and highly readable book explores the transdisciplinary nature of nanoscience and its societal impact, also addressing workforce training and risk management. Illustrating the historical perspective of the complexity of K-12 education communities, it defines nanotechnology and evaluates pertinent global and national landscapes, presenting examples of successful change within them. This book is composed of four sections: Foundations—addresses the national educational matrix, exploring the scientific and social implications associated with the delay in adopting nanoscience education in public schools Teaching Nanotechnology—discusses the critical process of teaching K-12 students the skills to understand and evaluate emerging technologies they will encounter Nanoscience Resources and Programs—provides a wide overview of the resources offered by funded outreach programs from universities with nanoscience centers Framework Applied—analyzes the structure of national government programs and skill level recommendations for nanoeducation from the National Nanotechnology Initiatives This book offers plans of action and links to sustainable (largely free)

development tools to help K-12 students acquire the skills to understand and evaluate emerging technologies. Promoting a holistic teaching approach that encompasses all aspects of science, the authors strive to help readers implement change so that decisions about resources and learning are no longer made "from the top down" by policymakers, but rather "from the bottom up" by teachers, parents, and students at the local level. Akhlesh Lakhtakia, one of the contributors to this volume, was recently featured on CNN in a discussion on solar energy.

As unemployment soared in Zimbabwe in the early twenty-first century, betting on football/soccer emerged as a popular, if unsustainable, livelihood option, and the number of betting halls mushroomed. This book investigates this growing social phenomenon, providing a holistic analysis of football gambling in Zimbabwe and exposing its impact on the everyday lives of Zimbabweans. Drawing on original empirical and theoretical analysis from across six different areas of Zimbabwe, the book highlights the lived experiences of communities that are only beginning to grapple with the long-term effects of addiction. Explaining its historical origins in the colonial and immediate post-colonial periods, the authors delve into the motivations, patterns, practices and impacts of soccer betting. Tackling issues such as gender, livelihoods, addiction, religion, and tradition related to soccer betting, the book lays bare the general lack of policy frameworks and support services to protect vulnerable populations. This book offers a rare glimpse into a sociological phenomenon sweeping across Zimbabwe, with a particularly stark impact on the country's youth. It will interest sports and African studies researchers, as well as those focusing on the socio-health problems related to gambling.
