Many of today's high-net-worth investors are turning their attention to early-stage investing in emerging companies. They know just how successful and lucrative funding a start-up venture can be. Savvy angel investors can foresee distant but potentially huge returns from pre-IPO companies. There are scores of hungry entrepreneurs in search of capital and lots of money to be invested. But, matching the right entrepreneurs with wise investors, so that both can profit, is the challenge in new enterprises. Gerald Benjamin and Joel Margulis demonstrate that the real pitfall for potential investors is an incomplete understanding of the complexities of early-stage investing. At the same time, the angel capital market offers few mechanisms for bringing investors and entrepreneurs together, while securities regulations restrict communication between sophisticated investors and promising new businesses. So, where do the uninitiated start, and how do they separate the wheat from the chaff? In this ground breaking work, Benjamin and Margulis offer angel investors a hands-on manual for profiting from early-stage, private equity deals. They show how to develop investment criteria and overall game plans, locate viable investment opportunities, assess and manage risks, negotiate the most favorable deal terms, conduct thorough due diligence, and plan the all-important exit strategy.

Investors receive thousands of business plans, but only a few businesses receive funding. While there are many "how-tos" out there for entrepreneurs, no one has focused on the mind-set, tools, and foundation that are important to investors, and therefore essential to entrepreneurs. Getting Funded examines and develops a framework on which to base a business concept, conduct due diligence research and risk analysis, refine a business model and reformulate a business strategy, and develop a risk and reward structure that protects investment money and incentivizes entrepreneurs to successfully manage the opportunity to create and share value. Getting Funded shows entrepreneurs the tools and framework critical to a venture's success, teaching entrepreneurs to refine their business model and strategy as well as to develop an investment model to improve the investability of the venture and thereby increase the chances of getting funded. Even without the need for external funding, these tools will improve a venture's potential odds of success. Listen to the author discuss the book on the UK-based radio show, The Evening Show with Simon Rose.

They deliver more capital to entrepreneurs than any other source. And they often receive an incredible return on their investments. They're angel investors, some of the most important--and least understood--players in business today. The United States has closeto three million angels, whose investments in startups exceed \$60billion per year. Some of our most successful companies were funded by angels--companies like Ford, AOL, and Amazon.com. But until now, little has been written about these angels, due in part to their preference for anonymity. Angel Investors provides an inside look at who these angels are and how they operate. It also shows would-be angels and entrepreneurs how best to find each other. To learn more about this book, visit its website.

Diploma Thesis from the year 2001 in the subject Business economics - Marketing, Corporate Communication, CRM, Market Research, Social Media, grade: 2,1 (B), Leipzig University of Applied Sciences (Marketing Management), language: English, abstract: The declining stock markets in 2000 and 2001 have made it more difficult for entrepreneurs to obtain the financing for new ventures and have had an impact on existing relationships between young companies and their investors. Investor relationship marketing addressing the specific and varying requirements of investors is crucial as professional investors in particular apply stringent criteria for investments and as it is becoming increasingly difficult for start-ups to raise funds. Entrepreneurs face significant difficulties when acquiring capital for a start-up. Having at their disposal a variety of potential sources founders sometimes fail to choose the optimal alternative. This can impose considerable limitations on growth and development potential, increase the susceptibility to crises and threaten the very existence of the company. Professional management of relationships to potential and actual investors ought to be one of the main focuses of entrepreneurs' attention as inappropriate financing has been identified as the most frequent reason for the failure of new ventures. Entrepreneurial activities considerably influence the growth of an economy and have a positive effect on prosperity. In the Federal Republic of Germany (FRG) small and medium-sized enterprises (SME), which most new ventures are, account for more than half of the gross value added of all businesses and for over two thirds of all jobs. SMEs are not only essential for labour markets. Because they can react faster and more flexibly to changing market situations they contribute to an economy's ability to compete internationally. Since only a limited number of them survives - in Germany approximately 50% of new companies fail within the first

This book is a collection of technology startup cases in Asia, told in a narrative form, to give readers an insider view to how innovators and technopreneurs view entrepreneurial opportunities from use of technology, how the technopreneurs raise funding to support their vision, and the subsequent relationship of the technopreneurs and their investors. The book illustrates some of the cases using the theory of effectuation. The book is divided into four sections: Part One chronicles case studies of technopreneurs who raised capital but had difficulty with managing the investor expectations and relationship, to the detriment of the venture. Part Two chronicles case studies of technopreneurs who started their ventures without venture capital, with some who later raised capital at a much later stage, and were able to exit successfully. All case studies are of technology ventures in Asia from the mid-1990's where venture capital and entrepreneur ecosystem were under-developed. Lessons learned from the various case studies are told from a practitioner's perspective. Part Three describes the development of the venture ecosystem, specifically in Singapore, a city-state aspiring to follow the Silicon Valley model. The technopreneurs in Parts I and II play the roles of mentors/investors in the newly developing

system. Part Four includes two new young technology ventures' fund raising dilemmas, written in a teaching case format. The book can be used by practitioners and by educators for developing a deep understanding on the issues of raising capital for the purpose of growing the venture, and the trade-offs of capital from the different groups of investors and their financial terms. The venture capital model doesn't work—at least not for 99% of startups and small businesses. In this 99% are a lot of companies with incredible potential: businesses headed by female founders and those from diverse racial backgrounds, organizations headquartered outside of venture capital hubs, and purpose-driven enterprises that are creating social and environmental impact alongside financial success. Counter to what the press-savvy venture capital world would have you believe, there are a lot of funding options out there for startups and small businesses. Adventure Finance is designed to help you understand some of these options, and walk you through real examples of how other founders and funders have put them to use. In simple, approachable language, the book breaks down the different types of funding options available from revenue-based financing to recoverable grants to redeemable equity to distributed ownership and more. Through a mix of storytelling and research-based frameworks, based on a decade of research and experience in investing in early-stage companies, this book will give you the ability to determine how each of these structures can contribute to your own funding journey. The goal for this book is to shift the conversation about startup funding and help founders and funders widen the spectrum of "mainstream" investment options in order to make the venture financing world more inclusive and purpose-driven. This paper shows that the behavior of entrepreneurs facing incomplete financial markets and risky investment can explain why growth accelerations in developing countries tend to be associated with current account improvements. The uninsurable risk of losing invested capital forces entrepreneurs to rely on self-financing, so that when business opportunities open up entrepreneurs increase saving to finance the investment that produces growth. The key insight is that saving has to rise more than investment to allow also for the accumulation of precautionary assets. Plausibly calibrated simulations show that this net saving increase can sustain large and persistent net capital outflows.
