Periodontal Review John Wiley & Sons
The chapters of Studies on Periodontal Disease comprise four parts. Part 1 provides basic sciences from the general to the particular. The findings of cell culture and animal models supply the mechanism between periodontal disease and oxidative stress. In part 2, human clinical studies are mainly addressed. The effects of periodontal therapy on circulating oxidative stress are also

discussed. The relationships between periodontal disease and systemic diseases are examined in part 3. The involvement of oxidative stress and inflammation are discussed through in vivo and in vitro study results. Part 4 discusses future strategies, including the effects of antioxidants and nutrition on periodontal disease. This thorough examination of the relationship between oxidative stress and periodontal disease is essential reading for researchers in oxidative stress and periodontal clinicians, alike.

Abstract: Abstract Objectives: This preliminary study aimed to build up a practical periodontal risk assessment system for Hong Kong Chinese adults. Methods: A total of 99 Chinese dental hospital attendees (39 males and 60 females) aged 18 to 75 years (mean age: 45.414.3 years) participated in this study. They were interviewed using structured questionnaires. Full-mouth periodontal examination was then performed. A personal Periodontal Risk Spider-web (PRS) was formulated including 6 variables: (i) cigarette smoking; (ii) Diabetes Mellitus; (iii) Body Mass Index (BMI); (iv) halitosis; (v) oral hygiene habits; and (vi) dental visit

patterns. Three periodontal risk categories were defined following calculation of PRS total risk score: low risk (0-3), moderate risk (4-5) and high risk (>5). The association of each variable (i) to (vi) and the PRS total risk score with the severity of periodontal destruction was determined, and relative risk (RR) and odds ratio (OR) were calculated. Results: Mean % of sites with probing pocket depth (PPD) \geq 6mm in the subjects with smoking habit, Diabetes Mellitus or self-reported halitosis was significantly greater than in those who were free of these conditions ($p=6$ mm than the non-smokers without halitosis ($p=6$ mm was found in the high risk subjects (15.03.9%), as compared with 1 the moderate risk subjects (6.91.4%, p (The project has received the

Maternal Periodontal Disease and Preterm Birth LAP Lambert Academic Publishing

Periodontal diseases have their own unique pathological and immunological characteristics; treatment is frequently dependent upon altering human behavior and may also involve a wide variety of non-surgical and surgical techniques, with many interesting pharmacological and regulative adjuncts. This is a practical guide to good scientific practice in this fascinating aspect of dental work. This book, aimed primarily at practicing dentists, is meant to complement an education in clinical periodontology by raising questions and providing answers to some of them. Even those specializing in other branches of dentistry, such as orthodontics or endodontics, will find

much of clinical relevance to their practice. (Distributed by Thieme for Martin Dunitz Publishers)

Effect of Periodontal Therapy John Wiley & Sons

An investigation was made to (1) evaluate the effect of tooth selection on periodontal indices and (2) compare two periodontal examination systems now in use. Employing data secured from periodontal examination of all teeth in 117 males, aged 17 to 24 years, the highest coefficient of correlation found was between the mean for all teeth and the mean of the teeth employed in the Ramfjord system (P.D.I.) (.944). The Periodontal Screening System (G.P.I.) and the P.D.I. examination system were compared by scoring periodontal status on a segmented basis where the highest

score of any tooth in a segment was used as the score for the segment. The coefficient of correlation for the G.P.I. system was .961 compared to .910 for the P.D.I. system. The G.P.I. system was more effective in classifying periodontal status on a segmented basis. (Author).

This comprehensive atlas illustrates the important relationship between periodontal and systemic health and disease with a wealth of superb illustrations. The periodontium as a part of the oral tissues is of great interest to dentists and its importance extends beyond local disorders to a wide range of conditions that may affect periodontal health. The atlas covers both local and systemic disorders including

inflammatory diseases, developmental disorders, metabolic disorders, endocrine disorders, cancer and a vast number of other diseases, that may present with gingival or periodontal lesions. Now in its 2nd edition, *Periodontal Manifestations of Local and Systemic Diseases* helps periodontists, oral medicine specialists, general dentists, and dental students to diagnose and manage patients with complex medical problems. The book is unique because no other books specifically focused on the periodontal manifestations of oral and systemic diseases have been available in this form. Nineteen years after the first edition the book has been almost entirely rewritten, expanded and updated. Over 50% of the pictorial

material has been renewed and enriched with high quality color images. The book is written by a team of experienced experts and will be a valuable resource for the community.

Periodontitis is an inflammatory disease

of bacterial origin that results in the progressive destruction of the tissue that supports the teeth, specifically the gingiva, periodontal ligament and the alveolar bone. Evaluation of the clinical features of periodontal disease is critically important in obtaining essential information that can be used to detect the presence, determine the type and assess the severity of the disease. At the present time, the diagnosis of periodontal diseases is almost entirely based on traditional clinical assessments. Information collected during a periodontal examination is absolutely essential if one is going to intelligently determine a diagnosis and develop an effective treatment plan. Several automated computer-linked, pressure-sensitive periodontal probes

have been developed to more precisely detect small changes in probing depths and clinical attachment levels. The findings from such diagnostic procedures serve as the basis upon which a treatment plan is formulated and, after treatment, such procedures can also be extremely useful in evaluating treatment outcomes.

Periodontal Disease in an Aged Population, and Its Role in Cardiovascular Mortality John Wiley & Sons

A Study of Periodontal Examination Systems

Understanding Periodontal Diseases

Palgrave Macmillan

The link between maternal periodontitis and preterm birth has increasingly received attention, but the results were still inconclusive. This study aimed to examine the association between periodontitis and preterm birth. Cases were 130 women who delivered a live singleton newborn before 37 weeks' gestation. A random sample of 260

women, who delivered normal birth at the same day as the cases, were selected as controls. Periodontal examination was performed within 24 hours postpartum at bedside. Others related information were collected by a structured questionnaire and medical records. Multiple logistic regression analysis was performed controlling for socioeconomic, nutritional status, obstetrical, medical and dental history. Probing depth (PD) 4mm presented at 9% of sites in case and 4% of sites in control. There was 7% of sites in case and 3% of sites in control with CAL 3mm. Periodontitis was diagnosed in 33.9% of the cases and 10.4% of the controls. Periodontitis was significantly associated with preterm birth (adjusted OR = 4.47, 95%CI= 2.43,8.20). These findings

suggest that periodontitis may increase the risk of preterm birth even among women who do not smoke or drink. *Periodontal Manifestations of Local and Systemic Diseases* Saunders Limited. Covering the essentials of periodontics in an accessible, easy-to-read manner, *Practical Periodontics* examines all aspects of the discipline ranging from aetiology through to diagnosis, treatment planning and clinical management.
