IEEE International Conference on Software Maintenance--1999

John Wiley & Sons

Developments in data acquisition technologies, digital information and analysis, automated construction processes, and advanced materials and products have finally started to move the construction industry - traditionally reluctant to innovation and slow in adopting new technologies - toward a new era. Massive changes are occurring because of the possibilities created by Building information modeling, Extended reality, Internet of Things, Artificial intelligence and Machine Learning, Big data, Nanotechnology, 3D printing, and other advanced technologies, which are strongly interconnected and are driving the capabilities for much more efficient construction at scale. Construction 4.0:

Advanced Technology, Tools and Materials for the Digital Transformation of the Construction Industry provides readers with a state-of-the-art review of the ongoing digital transformation of the sector within the new 4.0 framework, presenting a thorough investigation of the emerging trends, technologies, and strategies in the fields of smart building design, construction, and operation and providing a comprehensive guideline on how to exploit the new possibilities offered by the digital revolution. It will be an essential reference resource for academic researchers, material scientists and civil engineers, undergraduate and graduate students, and other professionals working in the field of smart ecoefficient construction and cutting-edge technologies applied to construction. Provides an overview of the Construction 4.0 framework to address the global challenges of the buildingsector in the 21st century and an in-depth analysis of the most advanced digital technologies and systems forthe operation and maintenance of infrastructure, real estate, and other built assets

Covers major innovations across the value chain, including building design, fabrication, construction, operation and maintenance, and end-of-life. Illustrates the most advanced digital tools and methods to support the building design activity, including generative design, virtual reality, and digital fabrication. Presents a thorough review of the most advanced construction materials, building methods, and techniques for a new connected and automated construction model. Explores the digital transformation for smart energy buildings and their integration with emerging smart grids and smart cities. Reflects upon major findings and identifies emerging market opportunities for the whole AECO sector.

Canadian Bankruptcy Reports Woodhead Publishing

The aim of CISA'09 is to present the latest research and application results emerging from new research and technological developments of complex systems and intelligent machines acting on known or unknown, virtual or real, environments in an autonomous way or in cooperation with humans. This field requires skills in automation and control, perception of the environment, human-computer interfaces, mechanics and design, simulation, etc. It also aims at encouraging scientific cooperation between North and South and promoting scientific exchanges through a durable event.

Automation and Computational Intelligence for Road Maintenance and Management A comprehensive computational intelligence toolbox for solving problems in infrastructure management. In Automation and Computational Intelligence for Road Maintenance and Management, a team of accomplished researchers delivers an incisive reference that covers the latest developments in computer technology infrastructure management. The book contains an overview of foundational and emerging technologies and methods in both automation and computational intelligence, as well as detailed presentations of specific methodologies. The distinguished authors emphasize the most recent advances in the maintenance and management of infrastructure robotics, automated inspection, remote sensing, and the applications of new and emerging computing technologies, including artificial intelligence, evolutionary computing, fuzzy logic, genetic algorithms, knowledge discovery and engineering, and more. Automation and Computational Intelligence for Road Maintenance and Management explores a universal synthesis of the cutting edge in parameters and indices to evaluate models. It also includes: Thorough introductions to management science and the latest methods of automation and the structure and framework of automation and computing intelligence. Comprehensive explorations of advanced image processing techniques, recent advances in fuzzy, and diagnosis automation. Practical discussions of segmentation and fragmentation and different types of features and feature extraction methods. In-depth examinations of methods of classification along with various developed methodologies and models of quantification, evaluation, and indexing in automation. Perfect for postgraduate students in road and transportation engineering, evaluation, and assessment, Automation and Computational Intelligence for Road Maintenance and Management will also earn a place in the libraries of researchers interested in or working with the evaluation and assessment of infrastructure.

Selected Water Resources Abstracts Institute of Electrical & Electronics Engineers (IEEE)

State-of-the-art and novel methodologies and technologies allow researchers, designers, and domain experts to pursue technology-enhanced learning (TEL) solutions targeting not only

cognitive processes but also motivational, personality, or emotional factors. The International Conference in Methodologies and Intelligent Systems for Technology-Enhanced Learning (MIS4TEL'21) is hosted by the University of Salamanca and was held in Salamanca (Spain) from October 6–8, 2021. The annual appointment of MIS4TEL established itself as a consolidated fertile forum where scholars and professionals from the international community, with a broad range of expertise in the TEL field, share results and compare experiences. The calls for papers of the 11th edition of the conference welcomed novel research in TEL and expands on the topics of the previous editions: It solicited work from new research fields (ranging from artificial intelligence and agent-based systems to robotics, virtual reality, Internet of things and wearable solutions, among others) concerning methods and technological opportunities, and how they serve to create novel approaches to TEL, innovative TEL solutions, and valuable TEL experiences.

Tax Management Portfolios John Wiley & Sons

Climate change is one of the most challenging problems for the world, which leads researchers to study on the decrease of its impact to the environment at several disciplines. One of the most adverse effects on environment can be observed in transportation area. Hence, in this paper, the impact of bridge maintenance on the environment is inquired in the bridge maintenance prioritization perspective. The aim of this paper is to rank the bridge maintenance projects using type-2 neutrosophic number (T2NN) based fuzzy WASPAS (Weighted Aggregated Sum Product Assessment) and TOPSIS (Technique For Order Preference By Similarity To An Ideal Solution) to test five alternative bridges, where a critical environmental criterion is introduced in this model, which addresses to additional CO₂ emission because of truck detours in the event of a bridge closures. The applicability of the proposed model is demonstrated in a case study in Turkey. The evaluation findings show that the ranking results are robust and the CO₂ emission criterion is found to be the dominant criterion in the multicriteria decision-making model proposed in this paper.

Advances in 3D Habitat Mapping of Marine Ecosystem Ecology and Conservation Springer

This book provides the thoughtful writings of a selection of authors illustrating a central concept: Sustainable Development in Creative Industries, which utilizes a monetary equilibrium addressing issues, particularly those associated with the use of an integrated area in cyberspace and physical space, and their effect on the creative industries. 15 universities from Asia and Europe have participated in the 9th Bandung Creative Movement, where this topic was explored. Sustainability issues are now at the forefront of progress. The book covers four main areas. The first section, entitled "Art, Culture, and Society," delves into the various sectors that contribute to building a more sustainable environment, including the arts and culture. Whereas, "Design and Architecture" is referring to cutting-edge practices in the fields of manufacturing, transportation, interior design, and building construction. The third section "Technology and New Media" delves into the transformation of technology into a new medium for the development of the creative industries. The final section, "management and Business," discusses an innovative perspective on the state of the market and management in the sector. Anyone interested in the intersection of creative industries, sustainability, and digital cultures would benefit intellectually from reading this book. The Open Access version of this book, available at <http://www.taylorfrancis.com>, has been made available under a Creative Commons Attribution-Non Commercial-No Derivatives (CC-BY-NC-ND) 4.0 license. CO2 Emission based prioritization of bridge maintenance projects using neutrosophic fuzzy sets based decision making approach
Management de la maintenance - 3e éd.

Maintaining a building is expensive: it costs many times more to run a building than to build it, yet maintenance is often accorded a low priority. Building Maintenance covers the technical aspects of maintenance for undergraduate students on built environment courses, particularly building surveying and facilities management. It addresses the major questions regarding maintenance activities and shows that maintenance should be considered seriously at the design stage. Extensive case studies illustrate what can go wrong, how to put matters right and how to get it right first time.

Armor All'Insegna del Giglio

The book presents a collection of accepted papers from the 3DGeoInfo 2015 international conference held in Kuala Lumpur, Malaysia from October 28 - 30, 2015. All papers underwent double-blind review by experts from around the globe. The conference brought together pioneering international researchers and practitioners to facilitate the dialogue on emerging topics in the field of 3D geo-information. The focus areas include: - Data Collection and Modeling: advanced approaches for 3D data collection, reconstruction and methods for representation- Data Management: topological, geometrical and network models for maintenance of 3D geoinformation- Data Analysis and Visualization: frameworks for representing 3D spatial relationships, 3D spatial analysis and algorithms for navigation, interpolation, advanced VR, AR and MR visualisation, as well as 3D visualization on mobile devices- 3D Applications: city models, Cadastre, LBS, etc.

Intelligent Systems and Automation Dunod

Il Convegno nasce come espressione della volontà della Soprintendenza Speciale Archeologica Beni Artistici e del Paesaggio di Roma, condivisa con questa Azienda, di ampliare le conoscenze sugli ipogei, che insistono al di sotto dei nostri Presidi Ospedalieri, in relazione e in analogia a quanto già condotto in precedenza, presso l'area di insediamento della Basilica Costantiniana, intitolata al Santissimo Salvatore, e le aree adiacenti, sulle quali vennero edificate tutte le altre strutture a compimento del Patriarcato, sin dal IV sec. d.C. La sopra citata volontà si è concretizzata con una apposita Convenzione, sottoscritta nel febbraio del 2018, che ha ritenuto di coinvolgere studiosi, appartenenti a prestigiose Università Italiane ed Internazionali, i cui attori principali erano quelli che fino ad allora avevano già dato il loro massimo contributo di alto valore scientifico, sia sull' Area Lateranense sia nell'area di competenza dell'Antico Ospedale. The Conference came about as the expression of the desire of the Soprintendenza Speciale Archeologica Beni Artistici e del Paesaggio for Rome, a desire which our Administration also shared, to expand knowledge of the underground remains that stand below our hospital buildings, in relation to, and in analogy with, the work already done in the past, near the area where the Constantinian Basilica stood, which was dedicated to the Most Holy Saviour, and the adjacent areas, on which were built all the other structures to complete the Patriarcato, ever since the 4th century AD. This aforementioned desire took concrete shape with a special Agreement, signed up to in February 2018, which set out to involve academics from prestigious Universities, in Italy and abroad. The main players in this Agreement were the same ones who, up until that time, had already made their biggest contribution, of high scientific value, both in the Lateran Area and in the area pertaining to the Ancient Hospital itself.

Annotation Proceedings of the August 1999 conference on software maintenance. Sixty-one contributions discuss reverse engineering, tools, migration, visualization and understanding, architectures and frameworks, management, testing, object-oriented technology, reuse and validation, models and processes, processes and technology, measurement and improvement, architecture, software change and impact analysis, software maintenance--the future, and on the threshold of Y2K. Lacks a subject index. Annotation copyrighted by Book News, Inc., Portland, OR.

West's California Digest 2d Frontiers Media SA

The book investigates the theme of Modernism (1920-1960 and its epigones) as an integral part of tangible and intangible cultural heritage which contains the result of a whole range of disciplines whose aim is to identify, document and preserve the memory of the past and the value of the future. Including several chapters, it contains research results relating to cultural heritage, more specifically Modernism, and current digital technologies. This makes it possible to record and evaluate the changes that both undergo: the first one, from a material point of view, the second one from the research point of view, which integrates the traditional approach with an innovative one. The purpose of the publication is to show the most recent studies on the modernist lexicon 100 years after its birth, moving through different fields of cultural heritage: from different forms of art to architecture, from design to engineering, from literature to history, representation and restoration. The book appeals to scholars and professionals who are involved in the process of understanding, reading and comprehension the transformation that the places have undergone within the period under examination. It will certainly foster the international exchange of knowledge that characterized Modernism

Reports of Selected Cases Decided in Courts of the State of New York Other Than the Court of Appeals and the Appellate Division of the Supreme Court Taylor & Francis

Cet ouvrage donne les méthodes et les outils à mettre en œuvre pour assurer la performance de l'activité maintenance de l'entreprise. Le premier chapitre permet de faire l'audit de la maintenance en se positionnant par rapport à un certain nombre de « bonnes pratiques », et de définir les axes sur lesquels travailler en priorité. Les chapitres suivants décrivent les leviers d'action permettant d'améliorer la maintenance, tant au niveau opérationnel et financier qu'humain. Cette 3e édition développe la partie sur le système de pilotage de la performance et inclut une nouvelle partie sur le rôle du technicien manager.

Cumulated Index Medicus Springer Nature

For a company to survive in the manufacturing industry, it must not only accumulate light-weight 3D data, but also share this information within the company and with related companies as well as train key personnel. 3D Manufacturing Innovation introduces the best practices developed by Toyota, Sony, Nikon, Casio and other pioneers in the global engineering scene, providing the reader with invaluable tips for manufacturing innovation.

Advances in Traffic Transportation and Civil Architecture Springer Nature

Advances in Traffic Transportation and Civil Architecture focuses on the research of traffic infrastructure. This proceedings gathers the most cutting-edge research and achievements, aiming to provide scholars and engineers with a preferable research direction and engineering solutions as reference. Subjects in this proceedings include: - Road Engineering - Bridge Engineering - Tunneling - Construction Technology and Processes The works of

this proceedings aim to promote the development of civil engineering and construction technology. Thereby, promote scientific information interchange between scholars from the top universities, research centers and high-tech enterprises working all around the world.

Quels sont les fondements sur lesquels repose la pratique du Lean ? Comment piloter la démarche pour atteindre les objectifs stratégiques de l'entreprise ? Comment associer le personnel pour garantir la réussite du Lean Management ? Comment « tirer » les flux et répondre au mieux aux besoins des clients ? Quels outils spécifiques utiliser dans les activités support ? Peut-on faire du Lean en amont de la production ? Découvrez, répartis en 8 objectifs, 64 outils indispensables pour introduire et déployer le Lean dans votre organisation, et améliorer ses performances en y associant vos collaborateurs. Traité de manière visuelle, chaque outil est présenté en 2 ou 4 pages comprenant : l'essentiel, le contexte d'utilisation, les étapes de mise en œuvre, les

avantages et les limites ainsi que des conseils méthodologiques. Certains outils sont complétés par un cas concret détaillé. Des vidéos d'approfondissement, accessibles par QR code, vous présentent les outils en situation (5S ; Vision, stratégie, management ; La VSM ; Lean & Green ; Ergonomie ; SMED ; SCRUM). Cette troisième édition met l'accent sur les outils logistiques (afin de prendre en compte les bouleversements nés de la pandémie de Covid et de la guerre en Ukraine), la digitalisation (qui ne cesse de progresser) et les outils répondant aux problématiques de l'Industrie 4.0.
