CARINA CARNEY

Catalog of the Officers and Students of the University in Cambridge The Admission and Academic Placement of Students from Bahrain, Oman, Qatar, United Arab Emirates, Yemen Arab Republic Report of the President A STUDY OF ADJUSTMENT PROBLEMS OF TURKISH STUDENTS STUDYING IN DUAL DIPLOMA ENGINEERING PROGRAMS IN THE U.S.A. The concept of "dual diploma program" is one of the current trends in international education, and the dual diploma partnership between the State University of New York System and Turkish universities is the pioneer of this concept. The purpose of this study was to determine the level and types of adjustment problems experienced by Turkish dual diploma students studying in the United States with respect to variables such as English-related difficulties, perceived and measured language proficiency, satisfaction with the program, year in the program, geographical region of origin in Turkey, gender, and major. It was hoped that the study would contribute to the current body of knowledge by increasing the understanding of adjustment problems faced by international dual diploma students in the United States. This study is one of the first studies which specifically focus on the adjustment problems of dual diploma students. Therefore, it is hoped that the study would make a significant contribution to the literature because dual diploma programs are quite new to American and Turkish institutions of higher education and there is a lot to be discovered about these programs. The study involved both quantitative and qualitative means of data collection and analyses. The participants of the study were a group of undergraduate Turkish students studying in the Environmental Engineering and Civil Engineering dual diploma programs at the University at Buffalo, State University of New York. The data for the study came from two sources: an anonymous survey and individual and focus group interviews. Fifty-three participants responded to the anonymous survey. Eighteen students participated in the interviews. The results of the study indicated that (a) Turkish students studying in dual diploma engineering

programs in the U.S.A. experience a moderate level of adjustment problems in their new academic and social environments; (b) differences related to academic cultures and preferences of two participating universities of the dual diploma programs are among the most important factors which affect the dual diploma students' adjustment problems; (c) English proficiency is another very important factor which has a considerable effect on the dual diploma students' adjustment; writing appears to be the most problematic language skill in academic settings, students also have some difficulties with listening and speaking in social settings; (d) the unique design of the dual diploma programs (spending first and third years in Turkey and second and fourth years in the United States) causes some problems as the students are required to go back and forth between the United States and Turkey throughout their college lives; (e) differences between the Turkish and American cultures have some important effects on the dual diploma students' adjustment problems, especially in academic environments; (f) some students spend most of their time in the United States in a small group of dual diploma students, which leads to speaking relatively no English and establishing limited social relationships with American students and other international students; and (g) pre-departure orientation provided to the students in Turkey is not comprehensive enough in terms of preparing them for the challenges of the new social and academic settings they are about to enter, arrival orientation sessions provided to the students in the United States is very comprehensive and beneficial; however, many students do not attend those sessions. Suggestions for current and future dual diploma program designers, administrators, professors, and students are provided, and implications for further research are discussed in the light of the findings of the study. Although the focus of this study was to investigate the adjustment problems of the dual diploma students studying at U.S. universities, many of its findings may also apply to the general international student population studying in U.S. institutions of higher education. The Journal of Education Daily Graphic

The VTAC eGuide is the Victorian Tertiary Admissions Centre's annual guide to application for tertiary study, scholarships and

special consideration in Victoria, Australia. The eGuide contains course listings and selection criteria for over 1,700 courses at 62 institutions including universities, TAFE institutes and independent tertiary colleges.

British Vocational Qualifications Graphic Communications Group Guide to Petroleum Engineering Career By: Engr. Azunna I. B. Ekejiuba (Ph.D.) Historically, human beings have used petroleum in one form or another since ancient times (more than 8000 years ago). However, the birth of the modern petroleum industry was on August 27, 1859, when Colonel Edwin L. Drake used the then popular cable tool (also called churn or percussion) drilling method to drill the actual historically first oil well, on a stream called Oil Greek, near Titusville, Pennsylvania, at a depth of 69 feet, six inches (21 metres). In recent years, the advent of the transcontinental transmission lines and petrochemical industries has increased the value of natural gas (methane) to a fuel in great demand and a chemical feedstock (raw material) for many modern commercial and industrial products, particularly the synthesis of plastics, rubber, fertilizers, solvents, adhesives, pesticides, gas-to-methanol (GTM), liquefied natural gas (LNG), et cetera. Guide to Petroleum Engineering Career is an ideal career guide, lecture note, practical manual, petrochemical production guide, information source (to all categories of practicing petroleum industry workers and enthusiasts who are interested to know more about the current key mankind energy resources), as well as a reference on the emerging renewable fuel economy which reflects the challenges faced by the millennium petroleum engineers.

Author Joseph Dyro has been awarded the Association for the Advancement of Medical Instrumentation (AAMI) Clinical/Biomedical Engineering Achievement Award which recognizes individual excellence and achievement in the clinical engineering and biomedical engineering fields. He has also been awarded the American College of Clinical Engineering 2005 Tom O'Dea Advocacy Award. As the biomedical engineering field expands throughout the world, clinical engineers play an evermore important role as the translator between the worlds of the medical, engineering, and business professionals. They

influence procedure and policy at research facilities, universities and private and government agencies including the Food and Drug Administration and the World Health Organization. Clinical Engineers were key players in calming the hysteria over electrical safety in the 1970's and Y2K at the turn of the century and continue to work for medical safety. This title brings together all the important aspects of Clinical Engineering. It provides the reader with prospects for the future of clinical engineering as well as guidelines and standards for best practice around the world. * Clinical Engineers are the safety and quality facilitators in all medical facilities.

Thom's Directory of Ireland The Princeton Review

This volume is a collection of scholarly papers that explore the complex issues concerning English Studies in the present Indian context. The discussions in this volume range from historical perspectives to classroom-specific pedagogies, from sociological and political hierarchies to the dynamics of intellectual development in the English language environment. Interrogating both policy and practice pertaining to English Studies in the context of Indian society, culture, history, literature and governance, the chapters seek to formulate contemporary perspectives to these debates and envision alternative possibilities. Since the introduction of English to India more than 2 centuries ago, the language has transmuted the very fabric of Indian society, culture, history, literature and governance. The idea of India cannot be conceived in its entirety without taking into consideration the epistemological role that English has played in its formation. The present globalized world order has added dimensions to English Studies which are radically different from those of India's colonial and postcolonial past. It is therefore imperative that the multitudinous shades and shadows of the discipline be re-examined with inputs drawn from the present context. This volume is for scholars and researchers of English literature and language studies, linguistics, and culture studies, and others interested in exploring new paradigms of engagement with the disciplinary formulation of English Studies in India.

Daily Graphic Kogan Page Publishers

Over the last decade as the importance of vocational qualifications has been firmly established, the system has become increasingly complex and hard to grasp. Now in its sixth edition, this popular and accessible reference book provides up-to-date information on over 3500 vocational qualifications in the UK. Divided into five parts, the first clarifies the role of the accrediting and major awarding bodies and explains the main types of vocational qualifications available. A directory then lists over 3500 vocational qualifications, classified by professional and career area, giving details of type of qualification, title, level, awarding body and, where possible, the course code and content. The third section comprises a glossary of acronyms used, together with a comprehensive list of awarding bodies, industry

lead bodies, professional institutes and associations, with their contact details. Section four is a directory of colleges offering vocational qualifications in the UK, arranged alphabetically by area. Finally, section five is an index of all qualifications, listed alphabetically by title.
