Concepts of Biology

Elsevier

Concepts of Biology is designed for the single-semester introduction to biology course for non-science majors, which for many students is their only college-level science course. As such, this course represents an important opportunity for students to develop the necessary knowledge, tools, and skills to make informed decisions as

they continue with their lives. Rather than being mired down with facts and vocabulary, the typical non-science major student needs information presented in a way that is easy to read and understand. Even more importantly, the content should be meaningful. Students do much better when they understand why biology is relevant to their everyday lives. For these reasons, Concepts of Biology is grounded on an evolutionary basis and includes exciting features that highlight careers in

the biological sciences and everyday applications of the concepts at hand. We also strive to show the interconnectedness of topics within this extremely broad discipline. In order to meet the needs of today's instructors and students, we maintain the overall organization and coverage found in most syllabi for this course. A strength of Concepts of Biology is that instructors can customize the book, adapting it to the approach that works best

in their classroom. Concepts of Biology also includes an innovative art program that incorporates critical thinking and clicker questions to help students understand--and apply--key concepts. *Immunohematology: Principles and Practice* Springer
The WHO guidelines on assessing donor suitability for blood donation have been developed to assist blood transfusion services in countries that are establishing or strengthening national systems for the selection

of blood donors. They are designed for use by policy makers in national blood programmes in ministries of health, national advisory bodies such as national blood commissions or councils, and blood transfusion services.

The Companion to Central and Eastern European Humanism: The Czech Lands is the first reference work on humanists and their literary activities in this region to appear in English. It provides

biographical and bibliographical data about humanist literary life between c. 1480 and 1630, in two volumes, organised alphabetically by authors' names. This first volume includes three introductory chapters together with more than 130 biographical entries covering the letters A-L and a complete overview of the most recent research on humanism in Central Europe. The interdisciplinary research team behind this Companion paid particular

attention to local approaches to the classical tradition, to humanistic multilingualism and to Bohemian authors' participation in European scholarly networks. The Companion is a highly relevant resource for all academics who are interested in humanism and the history of early modern literature in Central Europe. *Architectures, Algorithms, and Applications* Jones & Bartlett Learning
