Recreations in Mathematics

S. Chand
Publishing
Trieste Publishing has a
massive catalogue of
classic book titles. Our
aim is to provide readers
with the highest quality
reproductions of fiction

and non-fiction literature
that has stood the test of
time. The many
thousands of books in our
collection have been
sourced from libraries and
private collections around
the world. The titles that
Trieste Publishing has
chosen to be part of the
collection have been
scanned to simulate the
original. Our readers see
the books the same way

that their first readers did
decades or a hundred or
more years ago. Books
from that period are often
spoiled by imperfections
that did not exist in the
original. Imperfections
could be in the form of
blurred text, photographs,
or missing pages. It is
highly unlikely that this
would occur with one of
our books. Our extensive
quality control ensures

that the readers of Trieste Publishing's books will be delighted with their purchase. Our staff has thoroughly reviewed every page of all the books in the collection, repairing, or if necessary, rejecting titles that are not of the highest quality. This process ensures that the reader of one of Trieste Publishing's titles receives a volume that faithfully reproduces the original, and to the maximum degree possible, gives them the experience of owning the original work. We pride

ourselves on not only creating a pathway to an extensive reservoir of books of the finest quality, but also providing value to every one of our readers. Generally, Trieste books are purchased singly - on demand, however they may also be purchased in bulk. Readers interested in bulk purchases are invited to contact us directly to enquire about our tailored bulk rates. Elements of Applied

Mathematics Trieste

Publishing

Periodic Differential

Equations: An Introduction

to Mathieu, Lamé, and

Allied Functions covers

the fundamental problems

and techniques of solution

of periodic differential

equations. This book is

composed of 10 chapters

that present important

equations and the special

functions they generate,

ranging from Mathieu's

equation to the

intractable ellipsoidal

wave equation. This book starts with a survey of the main problems related to the formation of periodic differential equations. The subsequent chapters deal with the general theory of Mathieu's equation, Mathieu functions of integral order, and the principles of asymptotic expansions. These topics are followed by discussions of the stable and unstable solutions of Mathieu's general equation; general properties and characteristic exponent of Hill's equation; and the

general nature and solutions of the spheroidal wave equation. The concluding chapters explore the polynomials, orthogonality properties, and integral relations of Lamé's equation. These chapters also describe the wave functions and solutions of the ellipsoidal wave equation. This book will prove useful to pure and applied mathematicians and functional analysis.
