The Romancist, and Novelist's Library: the Best Works of the Best Authors Rowman & Littlefield

How can your library—and your patrons—benefit from mobile apps? This guidebook offers a solid foundation in "app-literacy," supplying librarians with the knowledge to review and recommend apps, offer workshops, and become the app expert for their communities. Smartphones and other mobile devices that support downloadable applications—universally referred to as "apps"—can be used to foster productivity, conduct research, or read and study. Additionally, savvy librarians can better serve their communities by gaining expertise in mobile technologies and being qualified to make app recommendations to patrons. This book introduces you to the apps that can help you save time and increase your own productivity as well as serve as a curator and reviewer of apps and resident expert to benefit your patrons. *Apps for Librarians: Using the Best Mobile Technology to Educate, Create, and Engage* will save you from wading through and learning about the millions

of apps available today and direct you to the very best apps in areas important to education, the workplace, and professional development. Organized by function—reading, writing, reference, multi-media, and productivity—apps are profiled with the following information: title, developer, price, platforms, general description, examples of use, and key features that make it worthwhile for learning and creative work.

**Apps for Librarians** Council on Library & Information Resources

Globally, libraries are the backbones of the institutions in which they exist, irrespective of whether they are in a developed country or a developing country. Ideally, no school should operate without one. Different types of libraries provide various kinds of information to a range of people. This collection of articles will attract the attention of education authorities, education policy makers, subject teachers, teacher librarians, academics, students, and parents. Young adults can also obtain information here concerning career or vocational guidance. This book promotes the use of libraries in students' learning and quality of education.

Igniting a Passion for Reading Cambridge Scholars Publishing

Libraries of all types have undergone significant developments in the last few decades. The rate of change in the academic library, a presence for decades now, has been increasing in the first decade of this century. It is no exaggeration to claim that it is undergoing a top to bottom redefinition. Cataloging and reference remain central to its new role, and the circulation of books is still high though declining. Among the changes is the architecture of the library: when new libraries replace old or where renovation is occurring; the role of technology at every stage and in every library application; the management of serials – selection, shelving and budgeting; and in a gradual but irrevocable move to digital forms, altered allocation of resources including larger portions of the budget diverted to preservation, not only of aging books, a theme in the latter part of the last century, but of digital files – cultural, historical, personal. In brief, the academic library is dramatically different today than it was only ten years ago. And with it, the profession of the academic librarian is also undergoing significant changes. Managing digital resources in all its forms, from telecommunications to storage and access devices, is central to its new roles. Creating, curating and preserving digital information is also key to the new librarianship. And what

about services to its clients? Here also we see dramatic change, particularly but not exclusively with guiding library users in the effective use of networked knowledge. Information literacy is a key term and skill in using the new tools of digital literacy: reading and writing, searching and extracting; and the new technologies that drive social networking – the iPhone, iPad, and iPod and its many imitators. We can't expect the redefined academic library to assume its final shape any time soon, if ever, but the transformation is well underway. This series: *Creating the 21st-Century Academic Library*, will explore this topic from a number of different perspectives. Volume 1, *Visionary Leadership and Futures*, will begin the discussion by examining some of the new roles and directions academic libraries are taking.

*College and Research Libraries* Bloomsbury Publishing USA

The boundaries of citizenship have been blurred by global information systems—while the public and private spheres have been reshaped through globalization (and colonialism and capitalism). This collection of new essays explores information and citizenship in the digital age from a range of perspectives, presenting cautionary tales along with possibilities for "decolonizing" digital information and literacy. Topics include Wikileaks and the dissolution of information; ethical issues for teachers, policy makers and librarians; and creating safe spaces through ethical librarianship. *The Heart of a Continent* Createspace Independent Publishing Platform

How librarians can be radical positive change agents in their communities, dedicated to learning and making a difference. This book offers a guide for librarians who see their profession as a chance to make a positive difference in their communities—librarians who recognize that it is no longer enough to stand behind a desk waiting to serve. R. David Lankes, author of *The Atlas of New Librarianship*, reminds librarians of their mission: to improve society by facilitating knowledge creation in their communities. In this book, he provides tools, arguments, resources, and ideas for fulfilling this mission. Librarians will be prepared to become radical positive change agents in their communities, and other readers will learn to understand libraries in a new way. The librarians of Ferguson, Missouri, famously became positive change agents in August 2014 when they opened library doors when schools were closed because of civil unrest after the shooting of an unarmed teen by police. Working with other local organizations, they provided children and their parents a space for learning, lunch, and peace. But other libraries serve other communities—students, faculty, scholars, law firms—in other ways. All libraries are about community, writes Lankes; that is just librarianship. In concise chapters, Lankes addresses the mission of libraries and explains what constitutes a library. He offers practical advice for librarian training; provides teaching notes for each chapter; and answers "Frequently Argued Questions" about the new librarianship.

*Mastering Digital Librarianship* Rowman & Littlefield

*Managing Cultural Change in Public Libraries* argues that changes to library Strategies and Systems can lead to transformations in library Structures that can, in turn, shape and determine Organisational Culture. Drawing on Management theories, as well as the ideas of Marx and Maslow, the authors present an ambitious Analytical Framework that can be used to better understand, support and enable cultural change in public libraries. The volume argues for radical – but sustainable – transformations in public libraries that require significant changes to Strategies, Structures, Systems and, most importantly, Organisational Culture. These changes will enable Traditional Libraries to reach out beyond their current active patrons to engage with new customer groups and will also enable Traditional Libraries to evolve into Community-Led Libraries, and Community-Led Libraries to become Needs-Based Libraries. Public libraries must be meaningful and relevant to the communities they serve. For this to happen, the authors argue, all sections of the local community must be actively involved in the planning, design, delivery and evaluation of library services. This book demonstrates how to make these changes happen, acting as a blueprint and road map for organisational change and putting ideas into action through a series of case studies. *Managing Cultural Change in Public Libraries* will be of particular interest to academics and advanced students engaged in the study of library and information science. It should also be essential reading for practitioners and policymakers and all those who believe that communities should be involved and engaged in the planning, design, delivery, and evaluation of library services.

*Libraries and Their Architecture in the 21st Century* Lulu.com

Makerspaces, sometimes also referred to as hackerspaces, hackspaces, and fablabs are creative, DIY spaces where people can gather to create, invent, and learn. In libraries they often have 3D printers, software, electronics, craft and hardware supplies and tools, and more. Makerspaces are becoming increasingly popular in both public and academic libraries as a new way to engage

patrons and add value to traditional library services. Discover how you can create a makerspace within your own library through this step-by-step guidebook. From planning your innovation center to hosting hack-a-thons, guest lectures, and social events in your new lab, *Makerspaces in Libraries* provides detailed guidance and best practices for creating an enduring, community driven space for all to enjoy and from which both staff and patrons will benefit. This well researched, in-depth guide will serve libraries of all sizes seeking to implement the latest technologies and bring fresh life and engaging programming to their libraries. Highlights and best practices include: budgeting and business planning for a librarymakerspace, creating operational documents, tools and resources overviews, national and international case studies, becoming familiar with 3D printers through practical printing projects (seed bombs), how to get started with Arduino (illuminate your library with a LED ambient mood light), how to host a FIRST Robotics Team at the library, how to develop hands-on engagement for senior makers (Squishy Circuits), and how to host a Hackathon and build a coding community.

**Rethinking Reference for Academic Libraries** McFarland

This book examines the changing roles of the librarian and how working within a rich digital environment has impacted on the ability of professionals to develop the appropriate 'know how', skills, knowledge and behaviours required in order to operate effectively. Expert specialists and opinion-makers from around the world discuss the challenges and successes of adapting existing practices, introducing new services and working with new partners in an environment that no longer recognizes traditional boundaries and demarcation of roles. The book is structured thematically, with a focus on three key strands where the impact of digital technologies is significant: - Rethinking marketing and communication: this strand looks at strategic approaches and practices which harness social media and illustrate the importance of communication and marketing activities in these new online spaces. - Rethinking support for academic practice: this part examines the professional expertise required of librarians who engage with and support new academic and learner practices in digitally rich teaching, learning and research environments. - Rethinking resource delivery: this section investigates the use of strategies to maximize access to online resources and services: harnessing system data to enhance collection management and user choice, designing and managing mobile 'friendly' learning spaces and providing virtual resources and services to an overseas campus. Readership: This timely and inspiring edited collection should make vital reading for librarians, library schools, departments of information science and other professional groups such as education developers, learning technologists and IT specialists.

*The Goal: Better Library Service for Everyone* Facet Publishing

"[I]deal for readers seeking a more comprehensive look at information dissemination technology, its context, and its impact on the way in which we now live." *Library Journal*, Starred Review Many of what we think of as Information Age tools and media — computers, cell phones, the internet, encryption, and more — evolved directly out of modern warfare. These tools started with World War I (which began not with arms, but with England cutting off underwater cables to Germany and isolating it), accelerated through World War II and the Cold War, and now play a center role in both declared and non-declared conflicts like election interference and cyberbattles. We buy phones and smart speakers because they are new and unlock great potential. Voice assistants like Siri and Alexa help us do our work and answer that one piece of trivia that bugs us. Yet these devices are data gatherers. They collect, repack, and monetize our questions, purchases, photographs, web surfing to form a data industry now larger than the oil industry. Well over 100 years ago the data industry put in place a business model that trades our attention for news and entertainment. That model has evolved into a complex art and science of message targeting and content ownership that has splintered communities while simultaneously concentrating media ownership to a few massive corporations. *Forged in War* takes a critical look at the systems we use and how we ended up in a society that values data over personal liberty and commerce over the public good. It tells a compelling and previously untold story of how our ideas of information and knowledge reflect the century of war that has militarized our worldview. Author David Lankes's work has been funded by organizations such as The MacArthur Foundation, The Institute for Library and Museum Services, NASA, The U.S. Department of Education, The U.S. Department of Defense, The National Science Foundation, and The U.S. State Department. This, his latest book will help all of us learn how war has shaped our world and how to begin to create an agenda to stand down weaponized data and a media that seeks to own our personal, even intimate data like one owns a gold mine. [Along Together](#) Facet Publishing

This innovative essay collection explores the personal and civic function of humility from a range of popular and scholarly perspectives. What does humility mean and why does it matter in an age of golden escalators and billion

*Leading the 21st-Century Academic Library* Facet Publishing

Are librarians and libraries relevant in the 21st century? This is a fundamental question and one that presents differing opinions across the many diverse information sectors. If there is a continuing need for libraries and for librarians, then how do library leaders obtain strategic support when there appears to be a lack of clarity or understanding about the very purpose of libraries at a time when economically, libraries are under pressure to develop new business models and be more commercially focussed? *Bold Minds: Library leadership in a time of disruption* brings together international leaders who frame many aspects of the current library provision and who carry responsibility for the library models of the future to consider how librarians and libraries can be a driving force in a time of disruptive economic, technological and cultural change. Each chapter critically presents a short leadership provocation regarding libraries and their purpose, encompassing impact, service delivery, collections, staff skills and professional training and assessing what it means for leaders, their sectors and organisations, and how they have developed their personal leadership signature. This book will be invaluable to library and information professionals in a range of public and private sector libraries as well as policy makers in services where libraries are a component. It will also be useful for students, educational establishments, and IT professionals with an information management element to their work.

*Better Library and Learning Space* Information Today, Inc.

Here is a highly readable guide to strategies and projects that have helped over 100 public libraries gain community support and funding during challenging times. Marylaine Block integrates survey responses from innovative library directors with her research, analysis, and extended interviews to showcase hundreds of winning programs and services. The strategies explored include: Youth Services; The Library as Place; Partnerships; Marketing; Stressing the Economic Value; Library 2.0; Outreach; and Helping the Community Achieve Its Aspirations. Projects are described in practitioners own words, with additional examples drawn from libraries long-range plans, annual reports, programs, and Web sites, as well as from news stories and library literature. The result is a rich source of ideas and inspiration for those who want their libraries to thrive, not merely survive. Supported by the author's Web page.

*An Overview of the Roles and Benefits of Libraries* National Geographic Books

Libraries have quietly changed over the last 20 years. They have adapted early and consciously to the changes of digitalization, they have recognized the changed need of their users for collaborative work and derived new spatial concepts from this. Transparency and access to information, knowledge and encounters are the prerequisites for holistic social development. It is the challenge of the 21st century as the information age. This book presents the latest developments in library architecture as well as the way scientists and architects are meeting this challenge. With essays by Achim Bonte, Catherine Lau, Max Dudler, Georg Gewers, Henning Larsen Architects, MSAO Architects, Claudia Lux, Marco Muscogiuri, Schmidt Hammer Lassen Architects, Snøhetta, Sauerbruch Hutton, gmp Architects followed by a conversion with Oliver Jahn and Dante Bonuccelli. Watch the first Knowledge Talk: KNOWLEDGE FOR ALL with Prof. Dr. Claudia Lux and Prof. Dr. Eike Schmidt on YouTube: [https://www.youtube.com/watch?v=aKk\\_wRBGt1E](https://www.youtube.com/watch?v=aKk_wRBGt1E) The new role of the Uffizi, Florence and the opening of knowledge to a wider society are subject of the first Knowledge Talk with Prof. Dr. Claudia Lux and Prof. Dr. Eike Schmidt live from the Uffizi on International Museum Day, May 18, 2021. The Knowledge Talk connects the topics from the new publication "Libraries and Their Architecture in the 21st Century".

*Problems in University Library Management* The Stationery Office

This compilation provides a sequential overview of some of OCLC Research's user behavior research findings that articulate the need for the design of future library services to be all about the user.

*Innovative Instruments for Community Development in Communication and Education* McFarland The rapid development of the Web and Web-based technologies has led to an ongoing redefinition of reference services in academic libraries. A growing diversity of users and the need and possibility for collaboration in delivering reference services bring additional pressures for change. At the same time, there are growing demands for libraries to show accountability and service value. All of these trends have impacted the field and will continue to shape reference and research services. And they have led to a need for increasingly specialized professional

competencies and a literature to support them. In order to reimagine reference service for twenty-first century learning environments, practitioners will need to understand several focal areas of emerging reference. In particular, collaboration with campus partners, diverse student populations, technological innovations, the need for assessment, and new professional competencies, present new challenges and opportunities for creating a twenty-first century learning environment. Librarians must not only understand, but also embrace these emerging reference practices. This edited volume, containing five sections and fourteen chapters, reviews the current state of reference services in academic libraries with an emphasis on innovative developments and future trends. The main theme that runs through the book is the urgent need for inventive, imaginative, and responsive reference and research services. Through literature reviews and case studies, this book provides professionals with a convenient compilation of timely issues and models at comparable institutions. As academic libraries shift from functioning primarily as collections repositories to serving as key players in discovery and knowledge creation, value-added services, such as reference, are even more central to libraries' and universities' changing missions.

*Information and Data Literacy* American Library Association

Libraries have existed for millennia, but today many question their necessity. In an ever more digital and connected world do we still need places of books in our towns, colleges, or schools? If libraries aren't about books, what are they about? In *Expect More*, David Lankes, winner of the 2012 ABC-CLIO/Greenwood Award for the Best Book in Library Literature, walks you through what to expect out of your library. Lankes argues that communities need libraries that go beyond bricks and mortar and beyond books. We need to expect more out of our libraries. They should be places of learning and advocates for our communities in terms of learning, privacy, intellectual property, and economic development. *Expect More* is a rallying call to communities to raise the bar, and their expectations, for great libraries.

**Managing Cultural Change in Public Libraries** Rowman & Littlefield

This stimulating collection offers numerous snapshots of innovation in action at a range of libraries, showcasing ideas and initiatives that will inspire librarians at their own institutions.

*Cultivating Civility* Routledge

What are the most important things a 21st-century library should do with its space? Each chapter in this cutting-edge text addresses this critical question, capturing the insights and practical ideas

of leading international librarians, educators and designers to offer you a 'creative resource bank' that will help to transform your library and learning spaces. This is an innovative and practical toolkit introducing concepts, drawing together opinions and encouraging new ways of thinking about library learning spaces for the future. The book is structured in three parts. Part 1 - Projects and trends describes features of library space around the world through a selection of focused case studies painting a global picture, identifying common directions and ideas as well as highlighting country and regional diversity. Part 2 - Trends and ideas looks at the why and how of library space, covering topics such as contextual factors, current ideas in library space development, and the creative design of new spaces. It examines how library spaces are adapting to new forms of learning, digital literacies and technological fluency. Finally, Part 3 - Ideas and futures looks to the future of libraries and their learning spaces, inviting future-scanning contributions from a diverse range of authors, including librarians, learning specialists, academics, architects, an interior designer, a furniture designer and a management specialist. Readership: This is a must-have text for those involved in designing and developing library and learning spaces, from library and university management to designers and architects. It's also a useful guide for students taking courses in library and information science to get to grips with the importance of library design.

*Information Services Today* CRC Press

The multiple facets of this volume belong to five large themes. The first theme, that of persuasion and manipulation, is studied here through electoral campaigns (i.e., mental filters used in voting manipulation, the mechanisms of vote mobilisation, manipulation and storytelling models). The institutionalization of education represents the second theme, approached here through specific interdisciplinary instruments: the intersection of higher education with public learning, the answers of the knowledge society to the issues of contemporary work problems, the institutional relationships used to solve educational problems specific to childhood and adolescence, as well as the role of media competencies in professional development. The third theme is related to the inheritance and transmission of cultural identity, instrumentalized through issues such as: the duty of intergenerational justice with regard to cultural heritage, education and vocational training in library science, the social inclusion role of public and digital libraries. The collective and cultural identity of communities represents the fourth large theme, being approached through a triple

perspective: the philosophical background of restoring the political dignity of communities, the communication space as a point of a needle towards the community space, and the communicational issue of the European capital of culture programmes. Lastly, the fifth theme belongs to practical and applied philosophy, specifically philosophical counselling, debating issues such as: the identification of the communicational background for this type of counselling, the secular approach to the problem of evil from a philosophical counselling perspective, the discussion of Platon's attitude towards suicide and of frank speech in the Epicurean school, the socio-anthropological perspective of immortality, as well as the formal approach of the relationship between real and imaginary.

*The modernisation review of public libraries* Rowman & Littlefield

Like other workplaces, libraries can sometimes be stressful, with library workers bearing the brunt of such problems as uncivil patrons, poor communication, inadequate leadership, and toxic behaviors by fellow employees. But there's hope. Following up their acclaimed examination of the dysfunctional library ("should be essential reading for library leaders" raves Journal of the Australian Library and Information Association), here the authors present a book of proactive solutions and guidance culled from their own research, including interviews with library administrators and staff. Sharing valuable insights that will stimulate thought and discussion towards the goal of a healthier and more harmonious workplace, this book addresses the subject from four viewpoints—individual, team, leader, and organization—focusing on solutions and practical steps in each area; shows how self-reflection and self-awareness can be key starting points for exploring workplace issues; offers numerous suggestions for wellness and self-care; provides tips for improving interpersonal communication and conversations in ways that prevent silos and span boundaries; sheds light on forming and sustaining cohesive library teams, then provides solutions for misaligned teams and dissenters; discusses why effectively conveying vision, role modeling, and demonstrating empathy are all crucial behaviors of library leaders; shares actions library leaders can take to engage employees in the change process; examines how organizational structures can either detract or contribute to a library's success; and details types of training that can be utilized to minimize dysfunction, including training for bias, empathy, conflict management, and diversity. Filled with beneficial advice on every page, this resource will help libraries be better workplaces for everyone.
