*Dictionnaire universel
Francois et Latin,
contenant la signification
et la definition [...]* Oxford
University Press
Esperanto, spoken by
thousands of people
across the world, is the
most successful
international language

project. In this book, the
French linguist and
literary critic Pierre Janton
describes the history of
Esperanto since its
invention in nineteenth-
century Eastern Europe
and offers a
comprehensive linguistic
description of the
language. This book is the
best general introduction
to Esperanto and its role
in the modern world.
Rooted in the populism
and internationalism of

the late nineteenth
century, Esperanto owes
its origins in part to
western European
educational currents and
in part to the cultural
history of eastern
European Jewry. It is a
fascinating historical and
sociological phenomenon
as well as a remarkable
linguistic system. The
book contains a survey of
today's movement for the
promotion of Esperanto as
an international language,

and a description of the extensive literature in Esperanto, both original and translated. Janton also provides a survey of the other global language projects, explaining why Esperanto has prevailed. *Dictionnaire universel François et Latin, vulgairement appelé Dictionnaire de Trévoux* Cambridge University Press

In contemporary philosophy, substantive moral theories are typically classified as either consequentialist or deontological. Standard

consequentialist theories insist, roughly, that agents must always act so as to produce the best available outcomes overall. Standard deontological theories, by contrast, maintain that there are some circumstances where one is permitted but not required to produce the best overall results, and still other circumstances in which one is positively forbidden to do so. Classical utilitarianism is the most familiar consequentialist view, but it is widely regarded as an

inadequate account of morality. Although Professor Scheffler agrees with this assessment, he also believes that consequentialism seems initially plausible, and that there is a persistent air of paradox surrounding typical deontological views. In this book, therefore, he undertakes to reconsider the rejection of consequentialism. He argues that it is possible to provide a rationale for the view that agents need not always produce the best possible overall outcomes, and this

motivates one departure from consequentialism; but he shows that it is surprisingly difficult to provide a satisfactory rationale for the view that there are times when agents must not produce the best possible overall outcomes. He goes on to argue for a hitherto neglected type of moral conception, according to which agents are always permitted, but not always required, to produce the best outcomes.

Seventeen authors, whose work represents the best of contemporary research and theory on a constellation of issues concerning the role of the arts in children's lives and learning, address critical issues of development, context, and curriculum from perspectives informed by work with children in formal and informal settings. This anthology draws on various cultural and institutional context and traditional and

contemporary practices from different parts of the world.

Les Principes Des Mathématiques Hachette UK
The Social (Re)Production

of Architecture brings the debates of the 'right to the city' into today's context of ecological, economic and social crises. Building on the 1970s' discussions about the 'production of space', which French sociologist Henri Lefebvre considered a civic right, the authors question who has the right to make space, and explore the kinds of relations that are produced in the process. In the emerging post-capitalist era, this book addresses urgent social and ecological

imperatives for change and opens up questions around architecture's engagement with new forms of organization and practice. The book asks what (new) kinds of 'social' can architecture (re)produce, and what kinds of politics, values and actions are needed. The book features 24 interdisciplinary essays written by leading theorists and practitioners including social thinkers, economic theorists, architects, educators, urban curators, feminists, artists and activists from

different generations and global contexts. The essays discuss the diverse, global locations with work taking different and specific forms in these different contexts. A cutting-edge, critical text which rethinks both practice and theory in the light of recent crises, making it key reading for students, academics and practitioners.

The Social (Re)Production of Architecture Taylor & Francis

A new 2024 translation of Immanuel Kant's paper

"Metaphysical Foundations of Natural Science" from the original German manuscript first published in 1785. This new edition contains an afterword by the translator, a timeline of Kant's life and works, and a helpful index of Kant's key concepts and intellectual rivals. This translation is designed for readability, rendering Kant's enigmatic German into the simplest equivalent possible, and removing the academic footnotes to make this critically important

historical text as accessible as possible to the modern reader. Published one year before the Critique of Pure Reasons, Metaphysical Foundations is Kant's methodology which would be used in his famous Critique. He attempts to deconstruct an Empiricist Epistemology and show that a priori principles, which are inherently metaphysical in nature, are necessary for the possibility of science to happen in the first place. He is reconciling the new mechanical causality

concepts created by Newton with their philosophic preconceptions. While his theory of Phoronomy and movement are not useful to modern physics, this work outlines some basic Epistemological Platonic criticisms of Material Determinism which would be proven Empirically, ironically, by Einstein's Quantum theories and modern theories of perceptual consciousness. One of the most fascinating contributions Kant brings to modern Science through this work

is in Quantum Mechanics. Kant, not Newton or Einstein, was the first to posit the theory of "action at a distance" which would eventually be proven by the observation of Quantum Entanglement. In the second section of this treaty, he writes Theorem 7 as "The attraction essential to all matter is a direct effect of the same on others through empty space" Kant's Foundations is a great primer on his Critique and outlines the pure materialism, and the Humic ethics which

follows, against which Kant is attempting to correct.

 An introduction to one of
 the greatest civilizations
 of the ancient world. This
 book presents a survey of

architecture, sculpture, painting and decorative arts from ancient Greece.

Biblio Newcomb Livraria Press

This major revision of Berstel and Perrin's classic Theory of Codes has been rewritten with a more modern focus and a much broader coverage of the subject. The concept of unambiguous automata, which is intimately linked with that of codes, now plays a significant role throughout the book, reflecting developments of the last 20 years. This is

complemented by a discussion of the connection between codes and automata, and new material from the field of symbolic dynamics. The authors have also explored links with more practical applications, including data compression and cryptography. The treatment remains self-contained: there is background material on discrete mathematics, algebra and theoretical computer science. The wealth of exercises and examples make it ideal for

self-study or courses. In summary, this is a comprehensive reference on the theory of variable-length codes and their relation to automata.

Endodontie Rowman & Littlefield

When Saba Khan's apartment burns in a mysterious fire, her high school rallies around her. But when a piece of art donated to a fund-raiser is revealed to be worth a fortune, Saba's life turns upside down again. Greed, jealousy, and suspicion create a tangled web as everyone debates

who should get the money, and makes accusations.
