This book has been considered by academicians and scholars of great significance and value to literature. This forms a part of the knowledge base for future generations. We have represented this book in the same form as it was first published. Hence any marks seen are left intentionally to preserve its true nature.

Tools and Mathematics Cambridge University Press

This book is an exploration of tools and mathematics and issues in mathematics education related to tool use. The book has five parts. The first part reflects on doing a mathematical task with different tools, followed by a mathematician's account of tool use in his work. The second considers prehistory and history: tools in the development from ape to human; tools and

mathematics in the ancient world; tools for calculating; and tools in mathematics instruction. The third part opens with a broad review of technology and intellectual trends, circa 1970, and continues with three case studies of approaches in mathematics education and the place of tools in these approaches. The fourth part considers issues related to mathematics instructions: curriculum, assessment and policy; the calculator debate; mathematics in the real world; and teachers' use of technology. The final part looks to the future: task and tool design and new forms of activity via connectivity and computer games.

Dictionnaire liégeois-français The Doctrines of the Great Educators

Jurisprudence générale du royaume, recueil périodique et critique de jurisprudence, de législation et de doctrine

Annales Conseil international d'éducation des adultes

What we don't know about learning could fill a book--and it might be a schoolbook. In a masterly commentary on the possibilities of education, the eminent psychologist Jerome Bruner reveals how education can usher children into their culture, though it often fails to do so. Applying the newly emerging "cultural psychology" to education, Bruner proposes that the mind reaches its full potential only through participation in the culture--not just its more formal arts and sciences, but its ways of perceiving, thinking, feeling, and carrying out discourse. By examining both educational practice and educational theory, Bruner explores new and rich ways of approaching many of the classical problems that perplex educators. Education, Bruner reminds us, cannot be reduced to mere information processing, sorting knowledge into categories. Its objective is to help learners construct meanings, not simply to manage information. Meaning making requires an understanding of the ways of one's culture--whether the subject in question is social studies, literature, or science. The Culture of Education makes a forceful case for the importance of

narrative as an instrument of meaning making. An embodiment of culture, narrative permits us to understand the present, the past, and the humanly possible in a uniquely human way. Going well beyond his earlier acclaimed books on education, Bruner looks past the issue of achieving individual competence to the question of how education equips individuals to participate in the culture on which life and livelihood depend. Educators, psychologists, and students of mind and culture will find in this volume an unsettling criticism that challenges our current conventional practices--as well as a wise vision that charts a direction for the future.
