This book helps readers apply testing and measurement theories. Featuring 22 self-standing modules, instructors can pick and choose the ones that are most appropriate for their course. Each module features an overview of a measurement issue and a step-by-step application of that theory. Best practices provide recommendations for ensuring the appropriate application of the theory. Practical questions help students assess their understanding of the topic while the examples allow them to apply the material using real data. Two cases in each module depict typical dilemmas faced when applying measurement theory followed by Questions to Ponder to encourage critical examination of the issues noted in the cases. Each module contains exercises some of which require no computer access while others involve the use of SPSS to solve the problem. The book's website houses the accompanying data sets and more. The book also features suggested readings, a glossary of the key terms, and a continuing exercise that incorporates many of the

steps in the development of a measure of typical performance. Updated throughout to reflect recent changes in the field, the new edition also features: --A new co-author, Michael Zickar, who updated the advanced topics and added the new module on generalizability theory (Module 22). -Expanded coverage of reliability (Modules 5 & 6) and exploratory and confirmatory factor analysis (Modules 18 & 19) to help readers interpret results presented in journal articles. -Expanded Web Resources, Instructors will now find: suggested answers to the book's questions and exercises; detailed worked solutions to the exercises; and PowerPoint slides. Students and instructors can access the SPSS data sets; additional exercises; the glossary; and website references that are helpful in understanding psychometric concepts. Part 1 provides an introduction to measurement theory and specs for scaling and testing and a review of statistics. Part 2 then progresses through practical issues related to test reliability, validation, meta-analysis and bias. Part 3 reviews practical issues related to test construction such as the development of measures of maximal performance, CTT item analysis, test scoring, developing measures of typical performance, and issues related to response styles and guessing. The book concludes with advanced topics such as multiple regression, exploratory and confirmatory factor analysis, item response theory (IRT), IRT applications including computer adaptive testing and differential item functioning, and generalizability theory. Ideal as a text for any psychometrics, testing and measurement, or multivariate statistics course taught in psychology, education, marketing and management, professional researchers in need of a quick refresher on applying

measurement theory will also find this an invaluable reference.

Now in its 25th-anniversary edition, Billings and Halstead's *Teaching in Nursing: A Guide for Faculty, 7th Edition* prepares you for the day-to-day challenges of teaching future nurses for practice in today's rapidly evolving healthcare system. This comprehensive resource covers all four components of nursing education: teaching and learning, curriculum, evaluation, and technology-empowered learning. You'll benefit from the expert guidance on such key issues as curriculum and test development, diverse learning styles, the redesign of healthcare systems, advances in technology and information, global health and curricular experiences, the flipped classroom, interprofessional education, and interprofessional collaborative practice. New to the 7th edition is a full-color design for improved learning and reference; increased use of illustrations, tables, and boxes to promote learning through enhanced usability; updated content throughout to reflect the latest trends in nursing education, including up-to-date content on the Next-Generation NCLEX® Exam; expanded use of high-quality case studies throughout the book; chapter-ending key points; new practice questions for nurse educator certification on a companion Evolve website; and much more! UNIQUE! Chapter on Global Health and Curricular Experiences focuses on internationalization of the nursing curriculum, with an emphasis on leading international learning experiences; policies, procedures, and guidelines for overseas study; and global and health competencies for health professions programs. Coverage of concept-based curricula includes strategies on how to approach and implement concept-based instruction. Pedagogical aids include Reflecting on the Evidence

boxes, covering such issues as how to do evidence-based teaching; applications of evidence-based teaching; implications for faculty development, administration, and the institution; and how to use the open-ended application questions at the end of each chapter for faculty-guided discussion. Strategies to promote clinical judgment and active learning are incorporated throughout the text, highlighting various evaluation techniques, lesson planning insights, and tips for developing examinations. Guidance on teaching in diverse settings addresses such topics as the models of clinical teaching, teaching in interdisciplinary settings, how to evaluate students in the clinical setting, and how to adapt teaching for community-based practice. Strong emphasis on teaching clinical judgment, new models of clinical education, and responding to needs for creating inclusive multicultural teaching-learning environments.

Critical Thinking and Writing for Nursing Students Svastham 24/7

The book provides guidance and direction for any nurse educator teaching in the professional environment and must write questions to evaluate learning. It covers the basics of item writing and leveling of items using Bloom's taxonomy to the learner. In addition, the book provides stem examples and new types of questions expected on the National Council Licensure Examination for both the registered and practical nurse. Finally, case study development and item analysis are presented.

Evaluation of student performance by examination is critical in nursing education, from undergraduate to continuing education programs. Many faculty have reported learning the item writing process in graduate programs, but it is often lost or not reused. Recent research reports nursing faculty using textbook questions that have not been validated and security of the questions have been compromised. A nursing education profession should have the ability to develop items to validate that learning has occurred. The skill is essential to any professional to evaluate the effectiveness of learning. Critical thinking is a skill necessary for licensure examinations, and students often need assistance to learn this skill to pass the licensure examination and practice as a nurse. Therefore, faculty need a source to facilitate their development of the learned item writing process to assist learners and prepare them for practice. This book is unique in that it addresses the basics and the advanced components. In addition, the book provides a substantial list of stems and case study ideas. Finally, the book describes how to use a knowledge-based item and develop an item to a higher level of Blooms' taxonomy and assists those nursing programs that educate international students to adequately prepare for the student to pass the national licensing examination required to practice in the US and Canada.
