Les Industries lithiques taillées de Franchthi (Argolide, Grèce) [The Chipped Stone Industries of Franchthi (Argolide, Greece), Volume 2 IGI Global
 This book explores the evolving roles of energy stakeholders and geopolitical considerations, leveraging on the dizzying array of planned and actual projects for solar, wind, hydropower, waste-to-energy, and nuclear power in the region. Over the next few decades, favorable economics for low carbon energy sources combined with stagnant oil demand growth will facilitate a shift away from today's fossil fuel-based energy system. Will the countries of the Middle East and North Africa be losers or leaders in this energy transition? Will state-society relations undergo a change as a result? It suggests that ultimately, politics more so than economics or environmental pressure will determine the speed, scope, and effects of low carbon energy uptake in the region. This book is of interest to academics working in the fields of International Relations, International Political Economy, Comparative Political Economy, Energy Economics, and International Business. Consultants, practitioners, policy-makers, and risk analysts will also find the insights helpful.

The emergence of the internet and developments in educational software have changed the way teachers teach and the way students learn. There has been a substantial increase in the quantity, quality, and diversity of educational material available over the internet or through the use of satellite

video and audio linkups. These technologies have allowed new learning methods and techniques to reach a greater geographic region and have contributed to the global transformation of education. *The Roles of Technology and Globalization in Educational Transformation* is an essential academic book that provides comprehensive research on issues concerning the roles of technology and globalization in educational transformation and the challenges of teaching and learning in various cultural settings and how they were resolved. It will support educational organizations that wish to find, create, or adapt technology for use in their institution. Featuring a broad range of topics such as public administration, educational technology, and higher education, this book is essential for teachers, deans, principals, school administrators, IT specialists, curriculum developers, instructional designers, higher education staff, academicians, policymakers, researchers, and students.

Information Practices and Knowledge in Health RosettaBooks

This book pursues the questions from a broad range of law and economics perspectives. Digital transformation leads to economic and social change, bringing with it both opportunities and risks. This raises questions of the extent to which existent legal frameworks are still sufficient and whether there is a need for new or additional regulation in the affected areas: new demands are made on the law and jurisprudence.

[Structural Transformation in South Africa](#) Channel View Publications

The COVID-19 pandemic has provided a unique opportunity to examine our understanding of the opportunities and challenges that ICTs offer to support the functioning of all aspects of education. The closure of educational institutions has forced a radical change in the practices of teachers and societies regarding the use of ICT to support teaching, learning, social relations and work in many sectors. In the training of digital skills, the

instrumental mastery of ICT continues to outweigh the preparation of citizens to make constructive and safe use of technologies. After two decades of educational policies, we continue to reduce digital literacy to instrumental skills. That is, you do not learn why to use educational technologies and how, or to be critical of their use. Education 4.0 seeks to develop and enhance the digital skills of students and teachers in digital teaching environments, through the creation of a line of academic training programs for undergraduate, postgraduate and continuing education. This article collection welcomes contributions to improve training policies and practices in Educational Digital Transformation for educational development (strategies, activities, proposals for assessment and certification of skills).

South Australia - and the world - is entering a time of transformational change: social, economic, industrial and environmental. As a new government takes the reins, it has the power to shape the future of our state and its citizens at a crucial moment. The automotive industry has closed, but maritime shipbuilding projects are booming. Automation and artificial intelligence technologies are on the rise - and with them, both fears of jobs lost and the promise of increased productivity and wellbeing. Which way will we go? In this insightful collection of essays, some of South Australia's leading policy thinkers consider our future in the context of jobs, our economy and its drivers, industrial relations, law and order, the environment, education, health (including ageing and aged care) and more.

This volume constitutes refereed proceedings of the 5th International Conference on Digital Transformation and Global Society, DTGS 2020, held in St. Petersburg, Russia, in June 2020. Due to the COVID-19 pandemic the conference was held online. The 30 revised full papers and 6 short papers presented in the volume were carefully reviewed and selected from 108 submissions. The papers are organized in topical sections on e-society: virtual communities and online activism; e-society: computational social science; e-polity: governance and politics on the Internet; e-city: smart cities and urban governance; e-economy: digital economy and consumer behavior; e-humanities: digital culture and education; e-health: international workshop "E-Health: 4P-medicine & Digital Transformation".

Health Politics in Europe OECD Publishing

Le présent document fournit un aperçu de la mise en œuvre de notre programme de transformation jusqu'à la fin de l'année 2020. Il s'inscrit en complément du rapport sur la « Transformation pour un impact accru dans les pays » présenté à la cent quarante-huitième session du Conseil exécutif. Notre processus de transformation comporte déjà quatre phases principales. Dès son arrivée au poste de Directeur général en juillet 2017, Tedros Adhanom Ghebreyesus a lancé un vaste programme d'écoute et de dialogue attentifs avec l'ensemble des personnels et des grands bureaux. En février 2018, le Groupe de politique mondiale a lancé la deuxième phase et piloté les travaux visant à finaliser le troisième Programme général de travail 2019-2023, élever au rang d'excellence treize de nos processus essentiels, définir notre nouveau modèle de fonctionnement à trois niveaux, et établir avec l'ensemble des personnels un ensemble de valeurs fondamentales orientant la manière dont nous travaillons. Le 6 mars 2019, le Directeur général et les directeurs régionaux ont lancé la troisième phase, visant notamment à aligner les structures des grands bureaux et à définir des options afin de mieux adapter notre présence dans les pays à la mission qui nous incombe. Dédiée à la mise en œuvre et à l'amélioration continue, la quatrième phase a commencé en janvier 2020 par un centrage, dans un premier temps, sur la consolidation de nos changements et, dans un deuxième temps, sur le suivi, l'apprentissage et l'amélioration continue.

With new technologies constantly being created, implemented, and sold, it is a robust opportunity for companies to hop on board with the latest digital trends. With the business world undergoing rapid changes and advancements in current times, the transformation process has been rapid and the disruptions significant. This has created a culture of innovation and a plethora of available business opportunities, especially when focused on Central Asia, Southeast Asia, and East Asia. Along with these innovative technologies and new opportunities in the business world comes challenges and trends within the Asian region that require more attention and advanced research to fully understand this digital transformation era and the resulting impacts, challenges, and solutions. The Handbook of Research on Disruptive Innovation and Digital Transformation in Asia addresses key topics for understanding business opportunities in Asia, covering a variety of challenges and nations in the Asian region from technological disruption and innovation to connectivity and economic corridors in Asia, Islamic finance and tourism, and more. Due to its innovative topics and approaches, geographical focus, and methodologies, the chapters provide readers with a unique value in bringing new perspectives to understanding emerging businesses and challenges in Asia. This book is ideal for professors in academia, deans, students, politicians, policymakers, corporate heads of firms, senior general managers, managing directors, information technology directors and managers, and researchers.

Low Carbon Energy in the Middle East and North Africa OECD Publishing

In this paper, we address the question of the agricultural market integration of Cambodia, Lao, Myanmar, Vietnam, and Philippines (CLMVP) countries within the Association of Southeast Asian Nations (ASEAN), and its other top trading partners. Using "Trade Potential" and "Competition Indices" indicators in this paper we assess the nature and extent of the agricultural market integration. We identify the exports of CLMVP countries with high export potential and comparatively low competition in export markets. Higher trade potential with lower competition (value or volume) indicates an opportunity of higher returns for agricultural producers. CLMVP countries are characterized by low diversity in agricultural exports. Nearly half of the total agricultural exports from all of them except Laos is contributed by only one commodity. It is found that market integration is an effective way of linking CLMVP smallholders to ASEAN agricultural markets. In addition to that this paper also discusses on tariff and non-tariff policy of CLMVP countries and found that the average tariffs on agri-food imports in CLMVP is 11.8% while it is 9.5% in non-CLMVP among the ASEAN countries. In non-tariff policy, among the CLMVP countries, Philippines shares the maximum number of SPS measures implemented on agricultural goods while Cambodia and Lao PDR did not report any SPS measures implemented by them between 2006 to 2020. Finally, to demonstrate the upward movement in the value chain, possibly due to quality upgradation, we present the dynamics of the unit values of CLMVP's agricultural exports.

Handbook of Research on Disruptive Innovation and Digital Transformation in Asia IGI Global

This book does not present a single philosophical approach to taxation and ethics, but instead demonstrates the divergence in opinions and approaches using a framework consisting of three broad categories: tax policy and design of tax law; ethical standards for tax advisors and taxpayers; and tax law enforcement. In turn, the book addresses a number of moral questions in connection with taxes, concerning such topics as: • the nature of government • the relation between government (the state) and its subjects or citizens • the moral justification of taxes • the link between property and taxation • tax planning, evasion and avoidance • corporate social responsibility • the use of coercive power in collecting taxes and enforcing tax laws • ethical standards for tax advisors • tax payer rights • the balance between individual rights to liberty and privacy, and government compliance and information requirements • the moral justification underlying the efforts of legislators and policymakers to restructure society and steer individual and corporate behavior.

ECIE 2018 13th European Conference on Innovation and Entrepreneurship IGI Global

This book may seem a simple accumulation of twenty-one public space projects in eight Latin American cities. On closer inspection, the presentation of project descriptions, photographs, and annotated drawings reflects a concern to analytically explain the operative aspects at work. The publication is not intended to serve only as a catalogue, guide, or manual on how to produce public space in spontaneous settlements. Rather, it goes beyond the aims of an index of best practices. It is intended, instead, as an empirical base for a critical and theoretical engagement with the problematic of development, social inclusion, public investment, (in)formal settlement, civil society and the public sphere. The publication achieves its final function at this third level, by providing a compelling argument to expand the agency of architects and urban designers and creatively find ways of justifying, financing, and building public spaces in communities —spaces that have a catalytic effectiveness in achieving significant urban and social transformation. This book was awarded by a Graham Foundation Grant and CAF Development Bank of Latin America. **FEATURED CASE STUDIES:** CONSERVATION 72 Linear parks along the Estero Salado | Guayaquil, Ecuador 80 National Park Babilonia and Chapu Manguera | Rio de Janeiro, Brasil 88 Urban agriculture along the Rimac River | Lima, Peru WASTE MANAGEMENT 96 Moravia Ecological Park | Medellin, Colombia 104 Plaza La Cruz, La Palomera | Caracas, Venezuela RISKMANAGEMENT 112 El Guasmo Beach, floodable park | Guayaquil, Ecuador 120 Safety plazas in Santa Marta El Triunfo | Lima, Peru 128 Recovery of the Juan Bobo Creek | Medellin, Colombia INFRASTRUCTURE 136 Northeast metro cable parks Comuna 1, La Popular | Medellin, Colombia 144 Barrio Las Independencias escalators and walkways | Medellin, Colombia 152 Funicular in Dona Marta | Rio de Janeiro, Brazil 160 Complexo do Alemão | Rio de Janeiro, Brazil 168 Ecotecnica Urbana Miravalle | Mexico City, Mexico PAVEMENT, PATHS AND THE SPACE SURROUNDING BUILDINGS 176 Pavement, paths and stairs Cerro Santo Doming and Cerro Toro | Valparaíso, Chile 184 Cerro Santa Ana urban rehabilitation | Guayaquil, Ecuador 192 Fernando Botero Library | Medellin, Colombia 200 Moravia Cultural Center | Medellin, Colombia 208 Española Crianza and community programs | Rio de Janeiro, Brazil 216 Plaza in Villa Tranquila | Buenos Aires, Argentina ACTIVITY 224 Casa Kolacho Comuna 13 | Medellin, Colombia 232 AfroReggae Cultural Center | Rio de Janeiro, Brazil 240 Alto Per. | Lima, Peru 248 El Calvario Puertas Abiertas | Caracas, Venezuela

OECD Reviews of Digital Transformation: Going Digital in Colombia Springer Nature

Emerging Technologies and Digital Transformation in the Manufacturing Industry offers a comprehensive solution to the pressing challenges faced by the manufacturing industry. As manufacturers grapple with the need to adapt to changing customer expectations and embrace emerging technologies, this book provides a timely and relevant resource. Edited by esteemed scholars, it features high-quality chapters that delve into technology-driven approaches, such as Internet-connected machinery, artificial intelligence, and sensors, with the aim of enhancing efficiency, productivity, and overall performance in manufacturing processes. Covering key topics such as machine learning, blockchain technologies, big data, and the industrial Internet of Things (IIoT), the book explores transformative concepts like digital twins, extended reality, and the impact of 5G and edge computing. With contributions from authoritative experts, this book serves as an indispensable tool for students, researchers, and IT professionals in manufacturing plants. By offering practical guidance and insights, Emerging Technologies and Digital Transformation in the Manufacturing Industry equips readers with the knowledge and tools needed to navigate the complexities of digital transformation and seize the opportunities presented by emerging technologies. Its academic rigor and practical applicability makes it a valuable resource that is poised to have a significant impact on the manufacturing IT community and academic scholars worldwide, enabling a successful journey toward a more efficient and resilient future in the manufacturing industry.

Transformation of Tax Audit in Innovative Economic Development Springer Nature

This book covers a range of topics including selective technologies and algorithms that can potentially contribute to developing an intelligent environment and smarter cities. While the connectivity and efficiency of smart cities is important, the analysis of the impact of construction development and large projects in the city is crucial to decision and policy makers, before the project is approved. This book also presents an agenda for future investigations to address the need for advanced tools such as mobile scanners, Geospatial Artificial Intelligence, Unmanned Aerial Vehicles, Geospatial Augmented Reality apps, Light Detection, and Ranging in smart cities. Some of selected specific tools presented in this book are as a simulator for improving the smart parking practices by modelling drivers with activity plans, a bike optimization algorithm to increase the efficiency of bike stations, an agent-based model simulation of human mobility with the use of mobile phone datasets. In addition, this book describes the use of numerical methods to match the network demand and supply of bicycles, investigate the distribution of railways using different indicators, presents a novel algorithm of direction-aware continuous moving K-nearest neighbor queries in road networks, and presents an efficient staged evacuation planning algorithm for multi-exit buildings.

Emerging Technologies and Digital Transformation in the Manufacturing Industry Springer Nature

Ce livre apporte sur la révolution numérique, phénomène majeur du 21e siècle, un éclairage conceptuel et un panorama d'ensemble que l'on ne trouvera nulle part ailleurs. Imposant recueil de connaissances et d'expertises, il est un outil indispensable pour comprendre notre époque. La première partie, consacrée à l'action publique, montre comment s'articulent les stratégies des différents acteurs (pouvoirs publics, plateformes marchandes, communs du numérique) pour la conduite des politiques publiques, la mise en place des infrastructures et la protection de

l'environnement. Dans la seconde partie, centrée sur les services collectifs, des acteurs de premier plan de ce nouveau monde numérique présentent une analyse approfondie des applications mises en œuvre dans les différents secteurs de l'économie publique et de l'économie sociale. La troisième partie traite des interactions entre numérique et démocratie, et décrit les immenses perspectives ouvertes par la révolution numérique, mais aussi les risques qu'elle comporte pour le droit, la justice, la protection des libertés, et le fonctionnement de nos institutions. Ce livre est le cinquième de la collection « Économie publique et économie sociale » publié aux PURH sous l'égide de la commission scientifique du CIRIEC-France. Il a été dirigé par Philippe Bance et Jacques Fournier, avec la collaboration d'Olivier Bonet et Yannick Prost.

OECD Reviews of Digital Transformation Going Digital in Brazil Springer Nature

The legendary Silicon Valley entrepreneur examines how both business and government organizations can harness the power of disruptive technologies. Tom Siebel, the billionaire technologist and founder of Siebel Systems, discusses how four technologies—elastic cloud computing, big data, artificial intelligence, and the internet of things—are fundamentally changing how business and government will operate in the 21st century. While this profound and fast-moving transformation can appear daunting to some, Siebel shows how organizations can not only survive, but thrive in the new digital landscape. In this authoritative yet accessible book, Siebel guides readers through the technologies driving digital transformation, and demonstrates how they can strategically exploit their powerful capabilities. He shows how leading enterprises such as Enel, 3M, Royal Dutch Shell, the U.S. Department of Defense, and others are applying AI and IoT with stunning results.

Educational Digital Transformation: New Technological Challenges for Competence Development Wakefield Press

This book aims to present dominant applications and use cases of the fast-evolving DT and determines vital Industry 4.0 technologies for building DT that can provide solutions for fighting local and global medical emergencies during pandemics. Moreover, it discusses a new framework integrating DT and blockchain technology to provide a more efficient and effective preventive conservation in different applications.

The two-volume set IFIP AICT 591 and 592 constitutes the refereed proceedings of the International IFIP WG 5.7 Conference on Advances in Production Management Systems, APMS 2020, held in Novi Sad, Serbia, in August/September 2020. The 164 papers presented were carefully reviewed and selected from 199 submissions. They discuss globally pressing issues in smart manufacturing, operations management, supply chain management, and Industry 4.0. The papers are organized in the following topical sections: Part I: advanced modelling, simulation and data analytics

in production and supply networks; advanced, digital and smart manufacturing; digital and virtual quality management systems; cloud-manufacturing; cyber-physical production systems and digital twins; IIOT interoperability; supply chain planning and optimization; digital and smart supply chain management; intelligent logistics networks management; artificial intelligence and blockchain technologies in logistics and DSN; novel production planning and control approaches; machine learning and artificial intelligence; connected, smart factories of the future; manufacturing systems engineering: agile, flexible, reconfigurable; digital assistance systems: augmented reality and virtual reality; circular products design and engineering; circular, green, sustainable manufacturing; environmental and social lifecycle assessments; socio-cultural aspects in production systems; data-driven manufacturing and services operations management; product-service systems in DSN; and collaborative design and engineering Part II: the Operator 4.0: new physical and cognitive evolutionary paths; digital transformation approaches in production management; digital transformation for more sustainable supply chains; data-driven applications in smart manufacturing and logistics systems; data-driven services: characteristics, trends and applications; the future of lean thinking and practice; digital lean manufacturing and its emerging practices; new reconfigurable, flexible or agile production systems in the era of industry 4.0; operations management in engineer-to-order manufacturing; production management in food supply chains; gastronomic service system design; product and asset life cycle management in the circular economy; and production ramp-up strategies for product

Les Industries lithiques taillées de Franchthi (Argolide, Grèce), Volume 3 The WHO transformation

Taking South Africa as an important case study of the challenges of structural transformation, the book offers a new micro-meso level framework and evidence linking country-specific and global dynamics of change, with a focus on the current challenges and opportunities faced by middle-income countries.

Springer Nature

This book gathers the best papers presented at the second conference held by the Russian chapter of the Association for Information Systems (AIS), which took place in Yekaterinburg, Russian Federation, in December 2019. It shares the latest insights into various aspects of the digitalization of the economy and the consequences of transformation in public administration, business and public life. Integrating a broad range of analytical perspectives, including economic, social and technological, this interdisciplinary book is particularly relevant for scientists, digital technology users, companies and public institutions.
