The publication of the James Herriot books led to an upsurge in interest in the veterinary profession among the public and inspired many to study veterinary medicine. However, the veterinary profession has changed markedly since those Herriot days, with many more opportunities for people entering the veterinary field, including such as job

prospects in bioscience research, government work, specialization in exotic animal medicine, animal welfare advisory work, international development work, and a whole host of other career options. The landscape of the veterinary curriculum has also broadened considerably, with topics like animal behavior, ethics, business management, client communication, veterinary public health, and clinical skills, alongside clinical veterinary medicine. Authored by a Royal Veterinary College instructor with extensive experience within the

veterinary profession and with teaching new students, this book provides a thorough explanation of what prospective students can expect to study at veterinary school, and it discusses career options available to new graduates. Additionally, the book offers a useful overview of current issues in the wider veterinary profession, as well as an honest and thought-provoking discussion of what veterinary life is actually like. It will also be of benefit to qualified vets and agricultural students. [Subject: Veterinary Science, Medicine, Agriculture]

In *To Punish or Persuade*, John Braithwaite declares that coal mine disasters are usually the result of corporate crime. He surveys 39 coal mine disasters from around the world, including 19 in the United States since 1960, and concludes that mine fatalities are usually not caused by human error or the unstoppable forces of nature. He shows that a combination of punitive and educative measures taken against offenders can have substantial effects in reducing injuries to miners. Braithwaite

not only develops a model for determining the optimal mix of punishment and persuasion to maximize mine safety, but provides regulatory agencies in general with a model for mixing the two strategies to ensure compliance with the law. *To Punish or Persuade* looks at coal mine safety in the United States, Great Britain, Australia, France, Belgium, and Japan. It examines closely the five American coal mining companies with the best safety performance in the industry: U.S. Steel, Bethlehem Steel, Consolidation Coal Company, Island Creek Coal Company, and Old Ben Coal Company. It also takes a look at the safety record of unionized versus non-unionized mines and how safety regulation enforcement impacts productivity.

What does it take to match into the specialty of your choice? This question is hotly debated and surveys of applicants and program directors find sharp divisions on the topic. In a recent survey, the authors concluded that "there are significant differences between program

directors' and medical students' perceptions of which factors are important in the residency selection process" (Brandenburg 2005). In advising students over the years, we have come to realize that misperceptions abound, with applicants frequently overestimating or underestimating certain residency selection criteria. These misperceptions may result in a failure to match. From our own experiences as students, and in the process of counseling applicants, we know how difficult, anxiety-provoking, and mysterious the residency selection process is. In this book, we answer the question of what it takes to match successfully. We provide specific evidence-based advice to maximize your chances of a successful match. Who

actually chooses the residents? We review the data on the decision makers. What do these decision makers care about? We review the data on the criteria that matter to them. How can you convince them that you would be the right resident for their program? We provide concrete, practical recommendations based on this data. At every step of the process, our recommendations are meant to maximize the impact of your application. Utilizing a unique combination of evidence-based advice and an insiders' perspective, this book will help you achieve your ultimate goal: The Successful Match.

This unique and engaging open access

title provides a compelling and groundbreaking account of the patient safety movement in the United States, told from the perspective of one of its most prominent leaders, and arguably the movement's founder, Lucian L. Leape, MD. Covering the growth of the field from the late 1980s to 2015, Dr. Leape details the developments, actors, organizations, research, and policy-making activities that marked the evolution and major advances of patient safety in this time span. In addition, and perhaps most importantly, this book not only comprehensively details how and why human and systems errors too often occur in the process of providing health care, it also promotes an in-depth understanding of the principles and practices of patient safety, including how

they were influenced by today's modern safety sciences and systems theory and design. Indeed, the book emphasizes how the growing awareness of systems-design thinking and the self-education and commitment to improving patient safety, by not only Dr. Leape but a wide range of other clinicians and health executives from both the private and public sectors, all converged to drive forward the patient safety movement in the US. Making Healthcare Safe is divided into four parts: I. In the Beginning describes the research and theory that defined patient safety and the early initiatives to enhance it. II. Institutional Responses tells the stories of the efforts of the major organizations that began to apply the new concepts and make patient safety a reality. Most

of these stories have not been previously told, so this account becomes their histories as well. III. Getting to Work provides in-depth analyses of four key issues that cut across disciplinary lines impacting patient safety which required special attention. IV. Creating a Culture of Safety looks to the future, marshalling the best thinking about what it will take to achieve the safe care we all deserve. Captivatingly written with an "insider's" tone and a major contribution to the clinical literature, this title will be of immense value to health care professionals, to students in a range of academic disciplines, to medical trainees, to health administrators, to policymakers and even to lay readers with an interest in patient safety and in the critical quest to create safe care.
