McMinn's color atlas of foot and ankle anatomy Elsevier Health Sciences

The new edition of this well-known text and atlas takes you from knowing human anatomical structures in the abstract to identifying human anatomy in a real body. It is the only text and atlas of gross anatomy that illustrates all structures using high-quality dissection photographs and clearly labeled line drawings for each photo. Plus, concise yet thorough text supports and explains all key human anatomy. High-quality, richly colored dissection photographs showing structures most likely to be seen and tested in the lab improve your ability to recognize and interpret gross specimens accurately. Interpretive line drawings next to every photograph let you test your knowledge by covering the labels. Color-coding on interpretive artwork helps you differentiate among fat, muscle, ligament, etc. Clinical Skills pages help you understand how to apply knowledge of gross anatomy to the clinical setting. More clinical comments throughout the text further clarify anatomical drawings and photographs. Cross sections added to the upper and lower limb sections increase your knowledge base. Up to 50 new color photographs and new CAT scans and MRIs enhance your visual guidance.

Color Atlas of Dermatology Schattauer Verlag

McMinn's Color Atlas of Human Anatomy is the most popular atlas of human anatomy ever published - over one million copies have been sold worldwide in more than 22 languages. The fourth edition has been carefully revised to reflect the increasing emphasis on clinical anatomy and to make this stunning atlas even more user-friendly. More than 60 new dissection photographs have been added along with 250 clinical notes. A brand new layout, color-coded user icons, additional orientational diagrams and interpretational line drawings, and an improved labeling system make this edition ideal for revision as well as long-term study.

The Color Atlas of "Xenopus laevis" Histology provides the first central source on the microscopic anatomy of cells, tissues, and major organs of the adult South African clawed frog, *Xenopus laevis*. For many years, *X. laevis* has been a highly popular experimental animal model in many areas of research. The recent development of transgenic *Xenopus* technology offers the promise that this animal model will be utilized more than ever before. The purpose of this book is to provide the active researcher with a central source of high quality light microscopic color images of the tissues of *X. laevis*, to aid in the identification of the cells and tissues of interest.

More than 350 full-color photographs to help you diagnose and treat common and rare pediatric skin problems *Color Atlas and Synopsis of Pediatric Dermatology* provides large, detailed full-color photographs of skin lesions in children, along with the latest management and treatment recommendations. Modeled after Fitzpatrick's *Color Atlas and Synopsis of Clinical Dermatology*, this essential point-of-care companion delivers everything you need to confidently assess, diagnose, and manage diseases of the skin, hair, and nails in pediatric patients encountered in a busy clinical environment. For each illness or disorder you will find authoritative coverage of: Epidemiology Pathophysiology History Physical Examination Differential Diagnosis Laboratory Examinations Course and Prognosis Treatment and Prevention/Management (with approved pediatric dosages) One or two full-color photographs Featuring coverage that spans everything from disorders of blood and lymph vessels to cutaneous bacterial, viral, and fungal infections, the Third Edition of *Color Atlas and Synopsis of Pediatric Dermatology* is enhanced by completely updated content with a focus on treatment recommendations.

Color Atlas by Archroma Mosby Elsevier Health Science

This atlas is a practical guide to the diagnosis of common retina and optic nerve disorders. Comprising more than 500 archetypal images, each disease is clearly illustrated showing clinical features and signs, from its early to later stages. The images are followed by a brief description highlighting key characteristics of the disease, providing clinicians with a comprehensive overview and enabling them to diagnose ocular conditions with ease. Divided into 15 sections, the book begins with an introduction to the 'normal' fundus. The following sections examine different retinal disorders, from retinal degeneration, uveitis, and infections, to traumatic chorioretinopathy and optic disc anomalies. The atlas concludes with chapters on ocular oncology and complications of surgery. A complete section is dedicated to paediatric retinal diseases.

Pathology Van Nostrand Reinhold Company

This atlas features outstanding full-color photographs of actual cadaver dissections, with accompanying schematic drawings and diagnostic images. The photographs depict anatomic structures more realistically than illustrations in traditional atlases and show students exactly what they will see in the dissection lab. Chapters are organized by region in order of a typical dissection. Each chapter presents structures both in a systemic manner from deep to surface, and in a regional manner. This edition has sixteen additional pages of clinical images—including CT and MRI—that students can compare with cross-sectional anatomic photographs. Many pictures have been electronically enhanced or rescanned for better contrasts.

The Color Compendium Thieme

In a single comprehensive volume, explore the most commonly encountered differential diagnoses and diagnostic problems -- both organ specific and site specific. They are approached using several different parameters, e.g. cell characteristics such as size, shape, or cytoplasm; growth patterns, e.g. solid, cystic, architectural patterns and structural characteristics.
