The practice of forensic pathology includes the collection and analysis of evidence in relation to a corpse in order to establish the cause of death. Knowledge of the cause of death contributes to the determination of the manner of death by medical examiners and coroners, who are occasionally assisted by law enforcement officers. In the process of establishing the cause and manner of death, representatives of various investigative bodies have several responsibilities, including explaining the death to family members, attempting to reduce the risk of similar deaths in the future, and, if applicable, apprehending the individuals who are responsible for the death. The most well-known and popular role of a forensic pathologist is in the investigation of cases of suspicious death; however, most medicolegal autopsies involve unexpected deaths that are above suspicion, many of which are

caused by trauma (trauma being defined as any physical force or agent that causes bodily harm). The purpose of *Forensic Pathology of Trauma: Common Problems for the Pathologist* is to provide practical advice and information about the conduct of the forensic autopsy in cases of trauma, and to offer guidance about the analysis of the autopsy findings in these cases.

Coroner Sir John investigates the murder of a man with too many enemies to count in this pacy, twisty instalment in the *Crown John* medieval mystery series, set in twelfth-century England. Exeter, 1195. High-spirited young knights, drunken squires,

pickpockets and horse thieves are pouring into the city for an exciting one-day jousting tournament. Not even a serious altercation between Sir Hugo Peverel, a manor lord from nearby Tiverton, and a mysterious Frenchman, Reginald de Charterai, can spoil the fun. Two days later, however, Sir Hugo's body is found in a barn, stabbed in the back. De Charterai seems the obvious culprit, but the county coroner, Sir John de Wolfe, soon discovers there's no shortage of people who wished the almost universally hated Hugo dead. All three of his brothers have a motive: two for his title, and one for Hugo's attractive young wife, Beatrice. Mistreated Beatrice had good reason herself to despatch her cheating husband – as did several prominent villagers whose lives Hugo ruined. With so many suspects to choose from, Sir John is confronted with one of the most difficult cases of his distinguished career.

This book is a compilation of high-yield, at-a-glance summaries for various topics on which pathologists frequently need information in a quick reference format while at the microscope (or when cramming for the boards). The authors are early-career

pathologists who have compiled this book from the perspective of pathologists-in-training. The focus is not organ-based histologic criteria, but rather everything else that goes into pathologic diagnoses but is difficult to keep committed to memory. The emphasis is on immunohistochemistry, special stains, grading systems, molecular markers, tumor syndromes, and helpful clinical references. The book has a unique format in that the information is presented primarily in tables and diagrams accompanied by minimal explanatory text. It is intended to serve as a 'peripheral brain' for pathology residents and also practicing pathologists, where frequently needed information is readily accessible and easy to navigate.
