In recent years, we've

developed a much
better grasp of the
biological and other
factors associated with
the development of
obesity. Reflecting our
evolving understanding
of causes and
consequences,

Handbook of Obesity: Epidemiology, Etiology, and Physiopathology provides comprehensive coverage of the biological, behavioral, and environmental determinants of obesity. *Part I* CRC Press

"Square dancing is friendship set to music," says author Betty Casey. Just take four couples, old or young, put 'em on a good floor, turn on the music, and you're all set. Whether you've done it before or you're just starting out, this book tells you everything you need to know—85 basic movements used all over the world, the spirited calls unique to square dancing, the costumes and equipment that are best, and music (from "Red River Valley" to

"Mack the Knife") that will set your feet in motion. Down-to-earth details and anecdotes give a taste of the good times in store for you. Find out how native folk dances grew out of European quadrilles, jigs, and fandangos. Open this book and get ready to: "wipe off your tie, pull down your vest, and dance with the one you love best." This book includes: 50 basic movements, 35 advanced movements, variations, dances that are a part of the American heritage, Contra and Round Dances, polkas and reels, and calls, past and present.

This 2 volume set comprises of the 3rd edition of Volume 1 and the 4th edition of Volume 2, both published in 2014. In recent years, we've developed a much better grasp of the biological and other factors associated with the development of obesity. New clinical trials, discoveries related to drug use, and greater understanding of the benefits of weight management are being discovered. Franchise Company Data MIT Press (MA)

Zika virus (ZIKV) is a mosquito-borne member of the Flaviviridae family that historically has been associated with mild febrile illness. However, the recent outbreaks in Brazil in 2015 and its rapid spread throughout

South and Central America and the Caribbean, together with its association with severe neurological disorders—including fetal microcephaly and Guillain-Barré syndrome in adults—have changed the historic perspective of ZIKV. Currently, ZIKV is considered an important public health concern that has the potential to affect millions of people worldwide. The significance of ZIKV in human health and the lack of approved vaccines and/or antiviral drugs to combat ZIKV infection have triggered a global effort to develop effective countermeasures to prevent and/or treat ZIKV infection. In this Special Issue of

Viruses, we have assembled a collection of 32 research and review articles that cover the more recent advances on ZIKV molecular biology, replication and transmission, virus-host interactions, pathogenesis, epidemiology, vaccine development, antivirals, and viral diagnosis.

Abstract: A nine year study of 45 Mayan children in a small highland village in Guatemala is reported. Studied were the microbiological and general health status of the children from fetal life to school age as affected by cultural

and environmental events. The role of nutrition and infection is discussed. Specific aspects reported are foundations of the study; the village and its people; operational procedures and approach; operational procedures and analysis of data; and results concerning maternal environment, the newborn infant, maternal factors and fetal growth, survival, growth and development in infancy and early childhood, feeding practices, infection and colonization of the intestine, diseases and disabilities, malnutrition, and multivariate analysis of physical growth. Recommendations are provided.

This updated and expanded book was written with the underlying conviction that global health and nutrition problems can only be solved through a firm understanding of the different levels of causality and the interactions between

the various determinants. This volume provides policy makers, nutritionists, students, scientists, and professionals with the most recent and up-to-date knowledge regarding major health and nutritional problems in developing countries.

At the 2013 Nutrition for Growth Summit in London, 96 signatories (governments, civil society organizations, donors, United Nations agencies, and businesses) agreed to support the creation of an annual report on global nutrition that would be authored by an independent expert group, in partnership with a large number of contributors. The first edition of this report, the Global Nutrition Report 2014, puts a spotlight on worldwide

progress by the 193 member countries of the United Nations in improving their nutrition status, identifies bottlenecks to change, highlights opportunities for action, and contributes to strengthened nutrition accountability on country and global levels.

As we move into the post-2015 era of the Sustainable Development Goals (SDGs), the world faces many seemingly intractable problems. Malnutrition should not be one of them. Countries that are determined to make rapid advances in malnutrition reduction can do so, and the incentives to improve nutrition are strong. Good nutrition provides a vital foundation for human development, central to meeting our full potential. When nutrition status improves, it leads to a host of positive

outcomes for individuals and families. Many more children will live to see their fifth birthdays, their growth will be less disrupted, and they will gain in height and weight. They will learn more in school because their brain function is not impaired. As a result of this positive early environment, as adults they will have better jobs and get ill less often. Older adults will age more healthily and live longer.

This book provides a practical, multidisciplinary approach to support a broad range of health professionals, social workers, public health workers and others tasked with providing

health and care to young adults. The continuum of life begins with the health and wellness of parents prior to conception, followed by embryonic and fetal development, and continues throughout life. Each person's life stages prepare them for the next and determine their health outcome and wellbeing over time. The text highlights the importance of promoting health throughout the lifespan, the influence of intergenerational health, and the concept of the Developmental Origins of Health and Disease in epigenetic processes and embryology. Authors underscore the importance of advancing health equity and lift up some

of the ethical considerations in this work. The authors explore specific interventions in four major categories: Lifestyle, Infections, Nutrition, and Contraception / Pregnancy Planning (LINC). Preconception care is defined by the World Health Organization as the provision of biomedical, behavioural and social health interventions to women and couples before conception. Preconception care includes evidence-based interventions to improve health status, to reduce behaviours, individual and environmental factors that contribute to poor health outcomes. This book offers readers evidence-based guidance regarding

fertility awareness and sperm health, genetic counselling and lifestyle assessments, as well as mental wellbeing, alcohol, tobacco and pharmacotherapy, and specialist care for those with chronic conditions, including a review of medications. It also covers relevant infections, including HIV and the Zika virus, as well as different types of environmental and occupational exposure. The book employs a framework focusing on health promotion, the social determinants of health, and the science behind preconception care. Strategies for improving preconception and interconception health, including examples from around the globe, are described in detail.

The past decade has seen an exponential increase in our knowledge and understanding of adipose tissue biology. This has coincided with the continued rise in obesity across all generations. Clearly despite substantial advances in research into adipose tissue this still has had limited impact on the on-going obesity epidemic across a majority of countries in the world. This book brings together many leading experts in the field to provide an up to date and comprehensive

review of the key aspects of adipose tissue. It therefore includes chapters on evolution, development and inflammation together with a detailed review of brown and beige adipose tissue biology and their potential significance in preventing or combating obesity. These chapters are complemented by those on genetics and gender influences, together with nutrition through the life cycle. Ultimately the book provides an overview of the complexities of adipose tissue biology and the continuing challenge to combat obesity in the 21st century.

Manufacturing with

lasers is becoming increasingly important in modern industry. This is a unique, most comprehensive handbook of laser applications to all modern branches of industry. It includes, along with the theoretical background, updates of the most recent research results, practical issues and even the most complete company and product directory and supplier's list of industrial laser and system manufacturers. Such important applications of lasers in manufacturing as welding, cutting, drilling, heat treating, surface treatment, marking, engraving, etc. are addressed in detail, from the practical point of view. A list of specific

companies dealing with manufacturing aspects with lasers is given.

In pregnancy, maternal nutrition sustains and nourishes the developing child.

Imbalances in either the direction of nutritional excess or deficiency can have adverse consequences for child health. In addition, more research now suggests that good pregnancy nutrition influences child health beyond pregnancy and delivery. This includes modifying the risk of child health outcomes as they enter childhood and adulthood through influences on placental development, hormonal pathways, and organ structure and function. Poor

pregnancy nutrition may also compromise maternal health during pregnancy, which may have long-term consequences for women's health.

Understanding the biological and social mechanisms operating during pregnancy can help in the design of better clinical and public health interventions. This Special Issue on "The Role of Pregnancy Nutrition in Maternal and Offspring Health" includes etiological and mechanistic studies of pregnancy nutrition with short- and long-term maternal and child health outcomes, including original research, narrative reviews, and systematic reviews and meta-analyses. Together, this body of work provides

important insights into the influence of dietary patterns, food groups, and nutrients on pregnancy outcomes, and long-term neurodevelopmental, respiratory, and metabolic health in the children. It also highlights nutritional consequences for specific groups of women, including those with pregnancy complications and eating disorders.

More children born today will survive to adulthood than at any time in history. It is now time to emphasize health and

development in middle childhood and adolescence--developmental phases that are critical to health in adulthood and the next generation. Child and Adolescent Health and Development explores the benefits that accrue from sustained and targeted interventions across the first two decades of life. The volume outlines the investment case for effective, costed, and scalable interventions for low-resource settings, emphasizing the cross-sectoral role of education. This evidence base can guide policy makers in prioritizing actions to promote survival, health, cognition, and physical growth throughout childhood and adolescence.

This volume offers the most comprehensive coverage on fetal programming.

Chapters are written by authors of international and national standing, leaders in the field and trendsetters. The clinical relevance of the current research is emphasized in each chapter, which also contains key points, key words, and concise summaries for ease of learning. Fetal programming affects conditions in the immediate postnatal period, as well as in later life and adulthood. These conditions include cardiovascular disease, frank hypertension, stroke, dyslipidemia,

coagulopathy, increased insulin resistance-metabolic syndrome, type-2 diabetes, leukemia, testicular cancer, prostate cancer, breast cancer, polycystic ovary syndrome, precocious puberty, impaired immune function, renal disease, lung disease, and osteoporosis.

Neuropathologies, behavioral and mental deficiencies, schizophrenia, and depression have also been reported in adults who were exposed to nutritional inadequacies in utero. Diet, Nutrition and Fetal Programming provides an overview on the effects of fetal programming on disease, and comprehensive looks at maternal nutrition factors and fetal

programming effects on brain and behavior, and physiology and disease. It also provides an in depth look at specific nutrient restrictions and supplements on physiology and disease, the effects of maternal disease on fetal programming, mechanisms of programming, and a special section on the international aspects and policies on fetal programming.

This two-volume set LNCS 6691 and 6692 constitutes the refereed proceedings of the 11th International Work-Conference on Artificial Neural Networks, IWANN 2011, held in Torremolinos-Málaga, Spain, in June 2011.

The 154 revised papers were carefully reviewed and selected from 202 submissions for presentation in two volumes. The first volume includes 69 papers organized in topical sections on mathematical and theoretical methods in computational intelligence; learning and adaptation; bio-inspired systems and neuro-engineering; hybrid intelligent systems; applications of computational intelligence; new applications of brain-computer interfaces; optimization algorithms in graphic processing units; computing languages with bio-inspired devices and multi-agent systems; computational intelligence in multimedia processing; and biologically

plausible spiking neural processing.
