Landkarten als Wissensvermittler und Ware. Landkarten sind vielseitige Medien: Mit ihnen werden Ressourcen erschlossen, militärische Operationen geplant, politische Forderungen symbolisiert, wissenschaftliche Erkenntnisse präsentiert und Wohnungen geschmückt. Sie vermitteln stets eine bestimmte Sicht auf die Welt, die auch durch die Kartographen und deren visuelles Wissen geprägt ist. Bei der Analyse von Karten geraten diese Protagonisten der Weltbildproduktion jedoch oftmals in den Hintergrund. Philipp Meyer stellt mit Hermann Haack (1872-1966) und Paul Langhans (1867-1952) zwei äußerst produktive Kartographen in den Mittelpunkt seiner Studie. Beide prägten in der ersten Hälfte des 20. Jahrhunderts den zeitgenössisch renommiertesten deutschen Verlag kartographischer Erzeugnisse: Justus Perthes in Gotha. Anhand von Haack und Langhans untersucht Meyer, wie im Zeitalter von Kolonialbewegung und nationalistischen Diskursen völkische und rassistische Deutungsmuster in den Karten visuell übersetzt wurden. Dabei wird die Beziehung von Politik und Kartographie im Hinblick auf den Zusammenhang von wirtschaftlichen Verlagsinteressen und der visuellen Gestaltung von Karten beleuchtet. Auf diese Weise erweitert Meyer die bisherige Forschung zu den politischen Kontexten von Kartographie um zentrale Aspekte.

How was Germany's experience of World War I depicted in film during the following years? Drawing on analysis of the films of the Weimar era--documentaries and feature films addressing the war's causes, life at the front, war at sea, and the home front--Bernadette Kester sketches out the historical context, including reviews and censors' reports, in which these films were made and viewed, and offers much insight into how Germans collectively perceived World War I during its aftermath and beyond.

International Catalogue of Scientific Literature Springer Science & Business Media

This book provides an eye-opening account of how we are using, misusing and abusing our planet's most vital resource.

Mitteilungen aus Justus Perthes' geographischer Anstalt über wichtige neue Erforschungen auf dem Gesamtgebiete der Geographie Birkhäuser

This book is the second of three volumes in which the recent knowledge of the extent and chronology of Quaternary glaciations has been compiled on a global scale. This information is seen as a fundamental requirement, not only for the glacial community, but for the wider user-community

of general Quaternary workers. In particular the need for accurate ice-front positions is a basic requirement for the rapidly growing field of palaeoclimate modelling. In order to provide the information for the widest-possible range of users in the most accessible form, a series of digital maps was prepared. The glacial limits were mapped in ArcView, the Geographical Information System (GIS) used by the work group. Included with the publication is a CD with digital maps, showing glacial limits, end moraines, ice-dammed lakes, glacier-induced drainage diversions and the locations of key sections through which the glacial limits are defined and dated. The last deglaciation is also shown in 500 year time-steps. The digital maps in this volume cover the USA and Canada and include Greenland and Hawaii. Both overview maps and more detailed maps at a scale 1: 1,000,000 are provided. Also available:Part I: Europe, ISBN 0-444-51462-7Part III: South America, Asia, Africa, Australia, Antarctica, ISBN 0-444-51593-3

The Great Art of Knowing Wallstein Verlag

In the Beginning: Recollections of Software Pioneers records the stories of computing's past, enabling today's professionals to improve on the realities of yesterday. The stories in this book clearly show that modern concepts, such as data abstraction, modularity, and structured approaches, date much earlier in the field than their appearance in academic literature. These stories help capture the true evolution. The book illustrates human experiences and industry turning points through personal recollections by the pioneers ... people like Barry Boehm, Peter Denning, Watts Humphrey, Frank Land, and a dozen others.

Athanasius Kircher Die Gestalten Verlag-DGV

Vols. 54-57 include section "Kartographischer Monatsbericht von Hermann Haack" (title varies) v. 1-4, 1906-11.

often described as the "fifth façade", the flat roof is extremely popular with architects. Its essential task is to shelter the space beneath it from the elements. Beyond this, the use of flat roofs may be optimized by integrating them as green roofs, roof terraces, circulation areas, and even productive solar roofs. In practice, however, their correct and professional realization is a highly exacting task: in addition to providing the planner with basic rules of construction and design, the Flat Roof Manual also supplies an overview of the use and construction types as well as the standard assemblies for flat roofs. Together with the most important standards and bodies of regulations, construction drawings of the principal connection points round out the volume.

Swiss Sensibility Houghton Mifflin Harcourt

German Culture through Film: An Introduction to German Cinema is an English-language text that serves equally well in courses on modern German film, in courses on general film studies, in courses that incorporate film as a way to study culture, and as an engaging resource for scholars, students, and devotees of cinema and film history. In its second edition, German Culture through Film expands on the first edition, providing additional chapters with context for understanding the era in which the

featured films were produced. Thirty-three notable German films are arranged in seven chronological chapters, spanning key moments in German film history, from the silent era to the present. Each chapter begins with an introduction that focuses on the history and culture surrounding films of the relevant period. Sections within chapters are each devoted to one particular film, providing film credits, a summary of the story, background information, an evaluation, questions and activities to encourage diverse interpretations, a list of related films, and bibliographical information on the films discussed.

Water Amsterdam University Press

It established new concepts for mobile cartography and showed the differences, but also the similarities towards traditional cartography and web cartography. The main focus is on the elaboration of adaptive methods for visualisation of geographic information for mobile usage, i.e. on mobile devices. Adaptation takes place in the components such as the mobile user, his/her activities with associated goals, as well as the situation they are placed in. The usage scenarios described were helpful for the implementation of a rudimentary, prototypical adaptive geovisualisation service for mobile users. The service for the example of point symbol maps was implemented based on open-standard formats and served as a proof of concept. It basically demonstrates how a mobile client can send as Simple Object Access Protocol (SOAP) encoded context parameters to a web service

History, Space and Place Walter de Gruyter

There has been a dramatic demographic shift from rural areas to cities in sub-Saharan African countries over the last few decades. This continuing urbanisation trend has created new challenges for local governments in terms of managing urban services, since over half of the city streets in these countries have no names or addresses, and the problem is particularly acute in the poorest neighbourhoods. This publication examines the use of street addressing initiatives to address this problem, giving information on current and future applications, considering examples of use in many African countries, and setting out a methodological guide for implementing such initiatives.

Spaces, too, have a history. And history always takes place in spaces. But what do historians mean when they use the word "spaces"? And how can spaces be historically investigated? Susanne Rau provides a survey of the history of Western concepts of space, opens up interdisciplinary approaches to the phenomenon of space in fields ranging from physics and geography to philosophy and sociology, and explains how historical spatial analysis can be methodologically and conceptually conceived and carried out in practice. The case studies presented in the book come from the fields of urban history, the history of trade, and global history including the history of cartography, but its analysis is equally relevant to other fields of inquiry. This book offers the first comprehensive introduction to the theory and methodology of historical spatial analysis. Supported by Open Access funds of the University of Erfurt

Street Addressing and the Management of Cities Elsevier

The past two decades have witnessed a revolution in the earth sciences. The quantitative, instrument-based measurements and physical models of geophysics, together with advances in technology, have radically transformed the way in which the Earth, and especially its crust, is described. The study of the magnetism of the rocks of the Earth's crust has played a major part in this transformation. Rocks, or more specifically their constituent magnetic minerals, can be regarded as a measuring instrument provided by nature, which can be employed in the service of the earth sciences. Thus magnetic minerals are a recording magnetometer; a goniometer or protractor, recording the directions of flows, fields and forces; a clock; a recording thermometer; a position recorder; a strain gauge; an instrument for geological surveying; a tracer in climatology and hydrology; a tool in petrology. No instrument is linear, or free from noise and systematic errors, and the performance of nature's instrument must be assessed and certified. This has been the task of the research worker in rock and mineral magnetism.

The authors of this Handbook offer a comprehensive overview of the various aspects of energy storage. After explaining the importance and role of energy storage, they discuss the need for energy storage solutions with regard to providing electrical power, heat and fuel in light of the Energy Transition. The book's main section presents various storage technologies in detail and weighs their respective advantages and disadvantages. Sections on sample practical applications and the integration of storage solutions across all energy sectors round out the book. A wealth of graphics and examples illustrate the broad field of energy storage, and are also available online. The book is based on the 2nd edition of the very successful German book *Energiespeicher*. It features a new chapter on legal considerations, new studies on storage needs, addresses Power-to-X for the chemical industry, new Liquid Organic Hydrogen Carriers (LOHC) and potential-energy storage, and highlights the latest cost trends and battery applications. "Finally - a comprehensive book on the Energy Transition that is written in a style accessible to and inspiring for non-experts." Franz Alt, journalist and book author "I can recommend this outstanding book to anyone who is truly interested in the future of our country. It strikingly shows: it won't be easy, but we can do it." Prof. Dr. Harald Lesch, physicist and television host

Kartographische Nachrichten

Contemporary architecture in Switzerland is influenced by Peter Zumthor and Herzog & de Meuron, recipients of the Swiss Pritzker Prize, as well as a number of other prominent architects. The book presents 25 buildings in Switzerland designed by 16 influential Swiss architects: The range covers high-density urban developments through to rural sites in the alpine environment, with examples of traditional craftsmanship and materials, and modern construction technology and engineering. Large-format photographs illustrate the buildings' proportions, materials, and details. Four authors analyze the Swiss building culture and its high architectural quality from an insider's and an outsider's point of view. In a detailed interview, Peter Zumthor explains his approach to architectural

design.

Geographische Rundschau

The treaty on the construction of a fixed Fehmarnbelt link was signed by the Danish and German

governments on 3 September, 2008. The decision engendered strong focus on the development perspectives following the fixed link's completion in 2020. This book examines the potential for regional development in the Fehmarnbelt Region --
