This book contains 13 chapters which deal with the current state
and future prospects of botanical pesticides in the eco-friendly

management of plant pests. Different issues, including the global
scenario on the application of botanical pesticides, plant products
in the control of mycotoxins, the commercial application of
botanical pesticides and their prospects in green consumerism,
natural products as allelochemicals, their efficacy against viral
diseases and storage pests, and bioactive products from fungal
endophytes, are covered. The book may be useful to many,
including plant pathologists, microbiologists, entomologists, plant
scientists and natural product chemists. It is expected that the
book will be a source of inspiration to many for future
developments in the field. It is also hoped that the book will
become useful for those engaged in such an extraordinary and
attractive area. The book would serve as the key reference for
recent developments in frontier research on natural products in
the management of agricultural pests and also for the scientists

working in this area.

Individual-based models are an exciting and widely used new tool for ecology. These computational models allow scientists to explore the mechanisms through which population and ecosystem ecology arises from how individuals interact with each other and their environment. This book provides the first in-depth treatment of individual-based modeling and its use to develop theoretical understanding of how ecological systems work, an approach the authors call "individual-based ecology." Grimm and Railsback start with a general primer on modeling: how to design models that are as simple as possible while still allowing specific problems to be solved, and how to move efficiently through a cycle of pattern-oriented model design, implementation, and analysis. Next, they address the problems of theory and conceptual framework for individual-based ecology: What is "theory"? That is, how do we develop reusable models of how system dynamics arise from characteristics of individuals? What conceptual framework do we use when the classical differential equation framework no longer applies? An extensive review illustrates the ecological problems that have been addressed with individual-based models. The authors then identify how the mechanics of building and using individual-based models differ from those of traditional science, and provide guidance on formulating, programming, and analyzing models. This book will be helpful to ecologists interested in modeling, and to other scientists interested in agent-based modeling.

This new edition offers comprehensive coverage of all areas of interventional pulmonology, a minimally invasive endoscopic method for diagnosing and treating lung disorders. The text is divided into eight sections on the major areas of interventional pulmonology, including basic endoscopy, lung cancer staging, and interventional bronchoscopy in asthma and emphysema. Chapters then explore specific procedures and techniques, including medical thoracoscopy, flexible and rigid bronchoscopy, endobronchial ultrasound, and electromagnetic navigation with coverage of history, indications and contraindications, and up-to-date evidence-based reviews. In recent years there have been many advances in interventional pulmonology, the most significant relating to lung cancer early diagnosis and late-stage treatment. Two new chapters on lung cancer epidemiologic changes and personalized lung cancer treatment explore new methods for maximizing patient care for an increasingly prevalent disease. This inclusive volume concludes with a look towards the future of interventional pulmonology and experimental techniques currently being tested. *Interventions in Pulmonary Medicine, Second Edition*, is a must have for pulmonologists, endoscopists, pulmonary oncologists, ENT

physicians, thoracic surgeons, anesthesiologists, and intensive care specialists and their teams.

Mushrooms recognised as edible have been collected and cultivated for many years. In the Nordic countries, the interest for eating mushrooms has increased. In order to ensure that Nordic consumers will be supplied with safe and well characterised, edible mushrooms on the market, this publication aims at providing tools for the in-house control of actors producing and trading mushroom products. The report is divided into two volumes: a. Volume I: "Mushrooms traded as food - Nordic questionnaire and guidance list for edible mushrooms suitable for commercial marketing b. Volume II: Background information, with general information in section 1 and in section 2, risk assessments of more than 100 mushroom species All mushrooms on the lists have been risk assessed regarding their safe use as food, in particular focusing on their potential content of bioactive constituents.

This volume analyzes and summarizes recent developments in several key interfacial electrochemical systems in the areas of fuel cell electrocatalysis, electrosynthesis and electrodeposition. The six Chapters are written by internationally recognized experts in these areas and address both fundamental and practical aspects of several existing or emerging key electrochemical technologies. The Chapter by R. Adzic, N. Marinkovic and M. Vukmirovic provides a lucid and authoritative treatment of the electrochemistry and electrocatalysis of Ruthenium, a key element for the development of efficient electrodes for polymer electrolyte (PEM) fuel cells. Starting from fundamental surface science studies and interfacial considerations, this up-to-date review by some of the pioneers in this field, provides a deep insight in the complex catalytic-electrocatalytic phenomena occurring at the interfaces of PEM fuel cell electrodes and a comprehensive treatment of recent developments in this extremely important field. Several recent breakthroughs in the design of solid oxide fuel cell (SOFC) anodes and cathodes are described in the Chapter of H. Uchida and M. Watanabe. The authors, who have pioneered several of these developments, provide a lucid presentation describing how careful fundamental investigations of interfacial electrocatalytic anode and cathode phenomena lead to novel electrode compositions and microstructures and to significant practical advances of SOFC anode and cathode stability and enhanced electrocatalysis.
