The Who's Who of Nobel Prize Winners is a one-stop source of detailed information on the men and women who earned the Nobel Prize during the 20th century. Organized chronologically by prize, each extensive article contains in-depth information on the laureate's life and career as well as a selected list of his or her publications and biographical resources on the individual. A concise commentary explains why the laureate received the award and summarizes the individual's other important achievements. This completely updated edition also contains a history of the prize. Four indexes distinguish this title from similar biographical references and enable researchers to search by name, education, nationality or citizenship, and religion.

Advanced UNIX Programming Butterworth-Heinemann
This report is WHO's thirteenth annual report on global tuberculosis (TB) control in a series that started in 1997. It presents WHO's latest assessment of the epidemiological burden of TB (numbers of cases and deaths), as well as progress towards the 2015 targets for global TB control that have been established within the context of the Millennium Development Goals (MDGs). It also includes a thorough analysis of implementation and financing of the WHO's Stop TB Strategy and the Stop TB Partnership's Global Plan to Stop TB, since in combination these have set out how TB control needs to be implemented and funded to achieve the 2015 targets. The report gives particular attention to the period 2006-2009, but selected epidemiological, implementation and financial data are presented for previous years as well. This includes epidemiological data back to 1990 and financial data back to 2002. Bringing together data reported by 196 out of 212 countries and territories in 2008, as well as data collected from these countries and territories in previous years, "Global Tuberculosis Control 2009" is the definitive source of information about the national and international response to the worldwide TB epidemic.

Children of the Turtle Fairleigh Dickinson Univ Press

This intelligence guide was prepared in response to requests from law enforcement executives for guidance in intelligence functions in a post-September 11 world. It will help law enforcement agencies develop or enhance their intelligence capacity and enable them to fight terrorism and other crimes while preserving community policing relationships. The world of law enforcement intelligence has changed dramatically since September 11, 2001. State, local, and tribal law enforcement agencies have been tasked with a variety of new responsibilities; intelligence is just one. In addition, the intelligence discipline has evolved significantly in recent years. As these various trends have merged, increasing numbers of American law enforcement agencies have begun to explore, and sometimes embrace, the intelligence function. This guide is intended to help them in this process. The guide is directed primarily toward state, local, and tribal law enforcement agencies of all sizes that need to develop or reinvigorate their intelligence function. Rather than being a manual to teach a person how to be an intelligence analyst, it is directed toward that manager, supervisor, or officer who is assigned to create an intelligence function. It is intended to provide ideas, definitions, concepts, policies, and resources. It is a primera place to start on a new managerial journey. Every law enforcement agency in the United States, regardless of agency size, must have the capacity to understand the implications of information collection, analysis, and intelligence sharing. Each agency must have an organized mechanism to receive and manage intelligence as well as a mechanism to report and share critical information with other law enforcement agencies. In addition, it is essential that law enforcement agencies develop lines of communication and information-sharing protocols with the private sector, particularly those related to the critical infrastructure, as well as with those private entities that are potential targets of terrorists and criminal enterprises. Not every agency has the staff or resources to create a formal intelligence unit, nor is it necessary in smaller agencies. This document will provide common language and processes to develop and employ an intelligence capacity in SLTLE agencies across the United States as well as articulate a uniform understanding of concepts, issues, and terminology for law enforcement intelligence (LEI).

While terrorism issues are currently most pervasive in the current discussion of LEI, the principles of intelligence discussed in this document apply beyond terrorism and include organized crime and entrepreneurial crime of all forms. Drug trafficking and the associated crime of money laundering, for example, continue to be a significant challenge for law enforcement. Transnational computer crime, particularly Internet fraud, identity theft cartels, and global black marketeering of stolen and counterfeit goods, are entrepreneurial crime problems that are increasingly being relegated to SLTLE agencies to investigate simply because of the volume of criminal incidents. Similarly, local law enforcement is being increasingly drawn into human trafficking and illegal immigration enterprises and the often associated crimes related to counterfeiting of official documents, such as passports, visas, driver's licenses, Social Security cards, and credit cards. All require an intelligence capacity for SLTLE, as does the continuation of historical organized crime activities such as auto theft, cargo theft, and virtually any other scheme that can produce profit for an organized criminal entity. To be effective, the law enforcement community must interpret intelligence-related language in a consistent manner. In addition, common standards, policies, and practices will help expedite intelligence sharing while at the same time protecting the privacy of citizens and preserving hard-won community policing relationships.~
Antifascisms Bloomsbury Pub Limited

An aid to solving crosswords. It contains over 100,000 potential solutions, including plurals, comparative and superlative adjectives, and inflections of verbs. The list extends to first names, place names and technical terms, euphemisms and compound expressions, as well as abbreviations.

Memory and History in Twentieth-century Australia World Health Organization

Kalman filters are often used to estimate the state variables of a dynamic system. However, in the application of Kalman filters some known signal information is often either ignored or dealt with heuristically. For instance, state variable constraints (which may be based on physical considerations) are often neglected because they do not fit easily into the structure of the Kalman filter. This paper develops two analytic methods of incorporating

state variable inequality constraints in the Kalman filter. The first method is a general technique of using hard constraints to enforce inequalities on the state variable estimates. The resultant filter is a combination of a standard Kalman filter and a quadratic programming problem. The second method uses soft constraints to estimate state variables that are known to vary slowly with time. (Soft constraints are constraints that are required to be approximately satisfied rather than exactly satisfied.) The incorporation of state variable constraints increases the computational effort of the filter but significantly improves its estimation accuracy. The improvement is proven theoretically and shown via simulation results. The use of the algorithm is demonstrated on a linearized simulation of a turbofan engine to estimate health parameters. The turbofan engine model contains 16 state variables, 12 measurements, and 8 component health parameters. It is shown that the new algorithms provide improved performance in this example over unconstrained Kalman filtering.

Gerhard Richter is one of the most influential artists of the second half of the 20th century and is still at the forefront of painting today. His painting 'September' is the response to the bombing of the World Trade Centre on September 11, 2001. This book explores the painting and the event itself.

Tales from a Suitcase Univ of North Carolina Press

A humanistic account of the changing role of technology in society, by a historian and a former Dean of Students and Undergraduate Education at MIT. When Warren Kendall Lewis left Spring Garden Farm in Delaware in 1901 to enter MIT, he had no idea that he was becoming part of a profession that would bring untold good to his country but would also contribute to the death of his family's farm. In this book written a century later, Professor Lewis's granddaughter, a cultural historian who has served in the administration of MIT, uses her grandfather's and her own

experience to make sense of the rapidly changing role of technology in contemporary life. Rosalind Williams served as Dean of Students and Undergraduate Education at MIT from 1995 through 2000. From this vantage point, she watched a wave of changes, some planned and some unexpected, transform many aspects of social and working life—from how students are taught to how research and accounting are done—at this major site of technological innovation. In *Retooling*, she uses this local knowledge to draw more general insights into contemporary society's obsession with technology. Today technology-driven change defines human desires, anxieties, memories, imagination, and experiences of time and space in unprecedented ways. But technology, and specifically information technology, does not simply influence culture and society; it is itself inherently cultural and social. If there is to be any reconciliation between technological change and community, Williams argues, it will come from connecting technological and social innovation—a connection demonstrated in the history that unfolds in this absorbing book.

Type & Typo Humana

It is impossible to understand the cultures and achievements of the Greeks, Romans, Byzantines, and Arabs, without knowing something of their technology. Rome, for example, made advances in many areas which were subsequently lost and not regained for more than a millenium. This is a knowledgeable yet lucid account of the wonderful triumphs and the limitations of ancient and medieval engineering. This book systematically describes what is known about the evolution of irrigation works, dams, bridges, roads, building construction, water and wind power, automata, and clocks, with references to the social, geographical, and intellectual context.

The classic guide to UNIX® programming—completely updated! UNIX application programming requires a mastery of system-level services. Making sense of the many functions—more than 1,100 functions in the current UNIX specification—is a daunting task, so for years programmers have turned to *Advanced UNIX Programming* for its clear, expert advice on how to use the key functions reliably. An enormous number of changes have taken place in the UNIX environment since the landmark first edition. In *Advanced UNIX Programming, Second Edition*, UNIX pioneer Marc

J. Rochkind brings the book fully up to date, with all-new, comprehensive coverage including: POSIX Solaris™ Linux® FreeBSD Darwin, the Mac™ OS X kernel And more than 200 new system calls Rochkind's fully updated classic explains all the UNIX system calls you're likely to need, all in a single volume! Interprocess communication, networking (sockets), pseudo terminals, asynchronous I/O, advanced signals, realtime, and threads Covers the system calls you'll actually use—no need to plow through hundreds of improperly implemented, obsolete, and otherwise unnecessary system calls! Thousands of lines of example code include a Web browser and server, a keystroke recorder/player, and a shell complete with pipelines, redirection, and background processes Emphasis on the practical—ensuring portability, avoiding pitfalls, and much more! Since 1985, the one book to have for mastering UNIX application programming has been Rochkind's *Advanced UNIX Programming*. Now completely updated, the second edition remains the choice for up-to-the-minute, in-depth coverage of the essential system-level services of the UNIX family of operating systems.

The Who's Who of Nobel Prize Winners, 1901-2000 Routledge

In spite of steady growth in popularity, Pinter's plays have continued to elude adequate critical appraisal. Considering the last decade's scholarship, Austin E. Quigley attributes the impasse in Pinter criticism to the failure of Pinter's readers to appreciate the diversity of ways in which language can transmit information. This explanation places recent commentaries in a new light and enables the author to take a fresh approach to the plays themselves. Originally published in 1975. The Princeton Legacy Library uses the latest print-on-demand technology to again make available previously out-of-print books from the distinguished backlist of Princeton University Press. These editions preserve the original texts of these important books while presenting them in durable paperback and hardcover editions. The goal of the Princeton Legacy Library is to vastly increase access to the rich scholarly heritage found in the thousands of books published by Princeton University Press since its founding in 1905.

MIT Press

Sleep Disorders Medicine: Basic Science, Technical Considerations, and Clinical Aspects presents the scientific basis for understanding sleep. This book provides information on the diagnosis and treatment of a wide variety of sleep disorders.

Organized into 28 chapters, this book begins with an overview of the cerebral activity of wakefulness and the cerebral activity of sleep. This text then discusses the effects on mental and physical health of non-rapid eye movement (NREM) sleep, rapid eye movement (REM) sleep, and all sleep. Other chapters consider the neurophysiology and cellular pharmacology of sleep mechanisms. This book discusses as well the physiologic changes that occur in both the autonomic and somatic nervous system during sleep. The final chapter deals with the application of nasal continuous positive airway pressure for the treatment of obstructive apnea in adults. This book is a valuable resource for neurologists, internists, psychiatrists, pediatricians, otolaryngologists, neurosurgeons, psychologists, neuroscientists, and general practitioners.

Real Linux users don't use GUIs. No matter how popular, slick and sophisticated the interfaces become for Linux and UNIX, you'll always need to be able to navigate in a text editor. The vi editor is the original standard UNIX full screen editor. It's been around almost since UNIX began and it has changed very little. To get around the limitations of vi the people at Bram Moolenaar created the vim editor (the name stand for VI iMproved). It contains many more features than the old vi editor including: help, multiple windows, syntax highlighting, programmer support, and HTML support. All of the books published to date focus on vi alone not the expanded vim shipping with every major Linux distribution. In true New Riders' form, the vim reference will be a definitive, concise reference for the professional Linux user and developer. This tutorial takes a task oriented approach allowing you to learn only the commands that make your job easier.

Retooling MIT Press (MA)

Sleep Disorders II covers various aspects of sleep disorders. These include the different classification of sleep disorders, the genetic influences of sleep disorders, abnormality in the sleeping pattern, and the circadian rhythm sleep disorder. A sleep disorder is a medical disorder that affects the sleeping patterns of humans

(and sometimes animals). The disruptions in sleep can be caused by different factors, such as teeth grinding, night terrors, and the like. The book also discusses different perspectives on insomnia and hypersomnia. According to the International Classification of Sleep Disorders, insomnia is a sleep that is low in quality or a difficulty in sleeping. On the other hand, hypersomnia is a sleeping disorder characterized by excessive daytime sleepiness (EDS) or prolonged nighttime sleep. The book discusses narcolepsy, a syndrome that is characterized by excessive daytime sleepiness that is associated with cataplexy and other REM sleep phenomena. The different medicines for this disease are also discussed. People who are practicing neurology and internal medicine, especially those in pulmonary, cardiovascular, gastrointestinal, renal and endocrine specialties, will find this book valuable. * A comprehensive resource for the study of sleep science, sleep medicine, and sleep disorders * Fascinating noninvasive neuroimaging studies that demonstrate marked changes during different sleep states * A state-of-the-art reference that summarizes the clinical features and management of many of the neurological manifestations of sleep disorders
Hearing Impairment and Disability Mdpi AG

Sleep Disorders Part 1 offers a glimpse of developments that focus on diagnostic techniques in the field of neurobiology of sleep. This part discusses the models of the rapid eye movement (REM) sleep mechanism; issues regarding sleep states, stages, and memory consolidation; and advances in the understanding of the sleep-wake genes, gene products, the circadian clock, and the role of sleep duration. This book explains noninvasive neuroimaging studies, particularly positron emission tomographic and single photon emission computed tomographic scans. It further discusses advances in clinical science, including concepts about neurobiology of sleep, narcolepsy-cataplexy, therapy, and laboratory techniques. The significant advances in therapy have led to the addition of new drugs for the treatment of different sleeping disorders, as described in this book. Sleep is essential to humans. Awareness of its true importance leads to the development and acceptance of sleep medicines in the market. * Clinical data on groundbreaking advancements in the understanding of basic sleep science * Invaluable information on new therapies and drug protocols for sleep disorders * A state-of-

the-art reference that includes the role of genetics in sleep medicine

Sleep Disorders Lothian Children's Books

This book examines the relationship between memory, history and the competing narratives of identity, place, and gender in Australian society. Focusing particularly on popular culture, wars, and such specific events as the Bubonic Plague of 1900 and the measles epidemic of the 1950s, these essays open up Australia's past in radically different ways and demonstrate the centrality of memory to the writing of history.

Evaluation Engineering Omair Nazir

Bioluminescent Imaging: Methods and Protocols distills a wide range of techniques that use bioluminescence imaging as a tool for visualizing and tracking various biological processes. Covering diverse fields such as cellular and molecular biology, oncology, neurology, infectious diseases, immunology, and others, the detailed chapters of this volume are arranged by topic and describe practical procedures and applications of different bioluminescent reporters, from photoproteins (Aequorin) to bacterial luciferases as well as other secreted (such as Gaussia) and non-secreted luciferases (such as Firefly). Written in the highly successful *Methods in Molecular Biology* series format, chapters include introductions to their respective topics, lists of the necessary materials and reagents, step-by-step, readily reproducible laboratory protocols, and expert tips for troubleshooting and avoiding known pitfalls. Authoritative and cutting-edge, *Bioluminescent Imaging: Methods and Protocols* aims to provide diverse and comprehensive techniques to researchers interested in implementing bioluminescence-based imaging in their laboratory, regardless of their previous level of experience with such methodologies.

Sleep Disorders Tate

Collection of true stories of Afghan immigrants. Second collection of stories from SBS documentary series of the same name. Since the Soviet invasion of Afghanistan in 1979 and oppressive rule of Taliban many thousands have been forced to flee their homeland. Contains eleven personal stories of courage and perseverance. Davies and Bosco are experienced filmmakers who devised the series now in its third season. Both are migrants to Australia.
