**Caries Excavation: Evolution of Treating Cavitated Carious Lesions** Frontiers Media SA  
 This work aims to advance the intellectual understanding of the emergence and reemergence of infectious diseases. Practitioners of diverse disciplines - epidemiology, evolutionary biology, environmental sciences, ecology, climatology, social and behavioural sciences, entomology, microbiology, parasitology and virology - report on recently developed techniques from many areas, including molecular biology, genetics, mathematical modelling and remote sensing. These techniques are exploited in an attempt to understand global configurations of infectious disease emergence. Analysis of historical examples reveals patterns not apparent during a single lifetime of observation. This volume emphasises the creative use of cross-disciplinary approaches to extend the limits of knowledge in this important area. These 32 papers were presented at a workshop held by the Harvard School of Public Health at Woods Hole, Massachusetts, 7th-10th November.  
**Auslander-Buchweitz Approximations of Equivariant Modules** Presses universitaires de Namur  
 Muscle foods include a wide range of processed meats and poultry, and therefore represent an important percentage of total worldwide food consumption. The sheer volume of products and the variety of processes available makes analyzing them problematic. Co-Edited by Fidel Toldra - Recipient of the 2010 Distinguished Research Award from the American

OROFACIAL PAIN AND HEADACHE is a timely, comprehensive and instructive addition to the pain literature; in particular the important and truly multidisciplinary area of orofacial pain. Based on their extensive clinical experience and a thorough understanding of pain mechanisms specific to the trigeminal system, the editors, Yair Sharav and Rafael Benoliel, have integrated knowledge from the areas of headache and orofacial pain and have succinctly explained common mechanisms involved in the two phenomena, with important implications for pain diagnosis and management. Internationally renowned editors and contributor team Integrated approach to the diagnosis and treatment of oral and facial pain syndromes as well as common primary headaches A thorough review of the four major clinical entities of orofacial pain: acute dental, neurovascular, musculoskeletal and neuropathic Comprehensive coverage of the pharmacotherapy of acute and chronic pain Chapters on the psychological, neurosurgical and otolaryngological aspects of orofacial pain An in depth discussion of facial pain and headaches secondary to medical co-morbidities Exploration of complementary and alternative methods of pain control including acupuncture, food additives and hypnosis

 This issue of Dental Clinics of North America focuses on Caries Management and is edited by Drs. Sandra Guzmán-Armstrong, Margherita Fontana,

Marcelle Matos Nascimento and Andrea G. Ferreira Zandona. Articles will include: Non-Surgical management of cavitated and non-cavitated lesions; Approaches to modulate biofilm ecology; Dietary implications in dental caries: A practical approach on nutritional counseling; Motivational communication in the dental practice: On the road to preventing oral disease; Personalized dental caries management in adults; Personalized dental caries management in geriatric and special needs populations; Clinical decision making in the management of dental caries; Surgical management of caries lesions: Selective removal of carious tissues; The interprofessional role in dental caries management: Perspectives from a nurse, physician, and social worker; Third party perspective of dental caries management; Less is more? The long-term health and cost consequences emanating from minimal invasive caries management; Performance of adhesives and restorative materials after selective removal of carious lesions: Restorative materials with anti-caries properties; Personalized dental caries management in children; and more!

[Critical Reviews in Tropical Medicine](#) LIT Verlag Münster

At the present time there are renewed global efforts to control the major tropical infections and to stem the tide of malnutrition, the two serious, often intertwined, problems that contribute to much of the morbidity and mortality in under privileged populations. Many international organizations have joined hands with national governments and with the private sector to search for new approaches to problems that beset much of the developing world, including countries in the tropical region. This volume continues the tradition of the previous publication in the Series. A variety of fare is offered to readers: explanations of the activities and achievements of the UNDP/World Bank/WHO Special Programme for Research and Training in Tropical Diseases; and studies of infant mortality, schistosomiasis, trypanosomiasis, helminths, lactase deficiency, oral rehydration therapy, functional consequences of iron deficiency, and fertility control. Au thoritative state-of-the-art reviews provide a critical analysis of recent data. I hope the Series will continue to prove useful to all those working in the tropics and to those in the industrialized countries whose awareness of physical health problems of the Third World is relatively limited. L'auteur raconte son histoire et celle de sa famille : - La légende familiale constituée des souvenirs racontés par les parents et qui résument l'aventure humaine d'une famille de pied noir arrivée en Algérie vers 1850. - De sa naissance avec ses souvenirs vécus et les choses qu'il a vues et auxquelles il a participé jusqu'à son départ pour le service militaire. - Sa guerre d'Algérie comme chef de harka dans le Constantinois, ses joies, ses peines, ses peurs, et surtout l'amour qu'il a éprouvé pour ces hommes qui ont servi sous ses ordres ainsi que pour leur famille, et leur abandon par l'armée. C'est aussi l'évocation de petites histoires qui décrivent la vie d'un chef de section de 20 ans, perdu dans la montagne et qui doit tout résoudre seul. C'est en résumé la synthèse de 21 mois à beaucoup marcher, à beaucoup observer, à beaucoup chercher, à se battre un peu mais avec intensité et à aiguïser la patience. C'est le retour à Alger en janvier 1962 avec tous ces morts et ces violences, puis c'est la fin d'une vie en Algérie heureuse, l'autre va commencer en métropole en juillet 1962.

This second edition presents a collection of exercises on the theory of analytic functions, including completed and detailed solutions. It introduces students to various applications and aspects of the theory of analytic functions not always touched on in a first course, while also addressing topics of interest to electrical engineering students (e.g., the realization of rational functions and its connections to the theory of linear systems and state space representations of such systems). It provides examples of important Hilbert spaces of analytic functions (in particular the Hardy space and the Fock space), and also includes a section reviewing essential aspects of topology, functional analysis and Lebesgue integration. Benefits of the 2nd edition Rational functions are now covered in a separate chapter. Further, the section on conformal mappings has been expanded.

**Mathématiques de la Sup à la Spé - 24 jours pour préparer son entrée en 2e année de prépa** Editions Le Manuscrit

Clinical Cases in Gerodontology provides a comprehensive overview of the most relevant dental issues that arise when dealing with an aging population. Clinical Cases in Gerodontology applies the theory and practice to real-life cases in a clinically relevant format. To aid learning, each of the clinical cases presented has a defined learning objective and goal. In addition, the authors discuss in detail the clinical decision-making factors and the text is enhanced with photographs that demonstrate the progressive stages of treatment. This important text: Offers a case-based guide to geriatric dental care Includes the thinking behind clinical decision making Fosters independent learning and prepares for case-based examinations Contains review questions and relevant literature citations Written for graduate and undergraduate dental students and professionals, Clinical Cases in Gerodontology offers an instructive case-based guide to the oral health of older adults.

The collection of papers in this anthology represents what may be a broad exploration of the role of philosophical inquiry in the classroom and in mathematics teacher education, a topos characterized by multiple, intersecting themes, all of which converge on a central question: what is the role of mathematics in the construction of the realities we live by, and could that role be different if we became aware of its invisible power? In the age of the Anthropocene - an era in which technological intervention plays an ever more central role in the way we build, develop and attempt to maintain our increasingly fragile and risk-prone human and natural world, what are the implications of the hegemonic epistemic status of mathematics in those processes? Does mathematics define the conditions of possibility of all knowledge, whether expressed in a theory or silently invested in a practice? Does or can mathematics and its presumed value-neutrality serve to limit, constrain, suppress, and even preclude other, perhaps more valuable forms of knowledge? Alternatively, can philosophical dialogue about mathematics serve to clarify, unmask, reframe and recreate our understanding of mathematics and its symbolic power in the human and material world, and act as an emancipatory form of knowledge in culture and society? What would such dialogues look like in the mathematics classroom? The papers in this volume address these questions in various contexts and registers,

and provide prospective and in-service teachers with compelling and suggestive ways of responding to them. A must-read for math educators everywhere.

Case reports and clinical trials conducted in various countries show, more and more frequently, a positive correlation between the presence of original teeth and prevalence of root caries in older age. Because this is a global trend, it is likely that the predicted increase in the worldwide elderly population may soon cause a significant increase in the number of people requiring effective means of preventing and treating root surface caries. In response to this development, a team of outstanding contributors has reviewed the most important aspects of root caries. This new volume presents their findings along with discussions of how to deal with this health issue that progressively affects the oral health balance. The chapters in this book are divided in four core parts: Epidemiology, Biological Determinants, Lesion Assessment and Features and Preventive and Operative Therapies. The collection of state-of-the-art articles provides a broad overview and will serve as a reference for clinicians as well as scientists and, hopefully, will encourage new research.

[Assignment Children](#) Karger Medical and Scientific Publishers

Essential Surgery is part of a nine volume series for Disease Control Priorities which focuses on health interventions intended to reduce morbidity and mortality. The Essential Surgery volume focuses on four key aspects including global financial responsibility, emergency procedures, essential services organization and cost analysis.

L'enseignant de français se trouve confronté à trois grands types de difficulté dans son objectif de faire acquérir aux élèves la maîtrise de leur langue maternelle. D'une part, l'étendue et la pertinence de sa formation, d'autre part, l'aptitude à la transposition didactique des connaissances qu'il a acquises, enfin la définition d'une politique pédagogique et sa mise en oeuvre. Les trois volumes "Le verbe dans tous ses états" (Diptyque 2), "De la langue au texte" (Diptyque 4), "Des savoirs savants aux savoirs enseignés" (Diptyque 8) sont consacrés à ces questions et contribuent à la réflexion en s'efforçant de relier les trois points de vue. La présente livraison traite plus particulièrement de l'expression linguistique de la notion de "cause", de l'adaptation pour les classes des savoirs savants - en particulier dans l'utilisation des nouvelles technologies - et des stratégies à adopter pour donner du sens aux apprentissages linguistiques et métalinguistiques.

In this issue, guest editors bring their considerable expertise to this important topic. Provides in-depth reviews on the latest updates in the field, providing actionable insights for clinical practice. Presents the latest information on this timely, focused topic under the leadership of experienced editors in the field. Authors synthesize and distill the latest research and practice guidelines to create these timely topic-based reviews.

Les ouvrages de la collection 24 jours permettent d'optimiser son travail durant les 2 années de classes préparatoires aux Grandes Écoles. Grâce au planning de travail fourni par les auteurs expérimentés, enseignants de classes préparatoire, ce ouvrage assurera aux étudiants en filière PSI des révisions solides en mathématiques entre les écrits et les oraux des concours Centrale/Supélec/Mines/Ponts. Chacune des 24 séances de travail, réparties sur 4 semaines de 6 jours, s'organise ainsi: Un sujet complet de type concours;Une analyse minutieuse du corrigé, par l'analyse de l'énoncé et un corrigé détaillé;Les techniques à mémoriser, formulaires et nombreux extraits des rapports de jurys. Travailler l'ensemble des 24 séances est la garantie de bien réviser tout le programme avant l'oral. Cela permet aussi, dès le début de la deuxième année, de consolider les pratiques vues en classe.

[Disease Control Priorities, Third Edition \(Volume 1\)](#) Editions Ellipses

This book covers both basic scientific and clinically relevant aspects of dental composite materials with a view to meeting the needs of researchers and practitioners. Following an introduction on their development, the composition of contemporary composites is analyzed. A chapter on polymerization explains the setting reactions and light sources available for light-cured composites. The quality of monomer-to-polymer conversion is a key factor for material properties. Polymerization shrinkage along with the associated stress remains among the most challenging issues regarding composite restorations. A new classification of dental composites is proposed to offer more clinically relevant ways of differentiating between commercially available materials. A review of specific types of composites provides an insight into their key issues. The potential biological issues of dental composites are reviewed in chapters on elution of leachable substances and cariogenicity of resin monomers. Clinical sections focus on material placement, finishing procedures, and the esthetics and clinical longevity of composite restorations. Bonding to tooth tissues is addressed in a separate chapter, as is the efficiency of various composite repair methods. The final chapter discusses future perspectives on dental composite materials.

Vols. for 1963- include as pt. 2 of the Jan. issue: Medical subject headings.

[The Revised Statutes of the Province of Quebec, 1925](#) Karger Medical and Scientific Publishers

Currently there is no reason, in most cases of cavitated caries lesions, to remove affected tissue. This book presents evidence-based research on the topic and provides assessments of diagnostic devices. It offers new insights into how a dentine carious cavity can be managed by either tissue removal or restoration. Methods for preserving dental tissue are presented and ample evidence highlights the need to seal with a quality restorative material. An update on how to conduct a randomized clinical trial is followed by a chapter on agreed upon terminology for supporting improved communication among oral health professionals around the world. This is a must-read for general practitioners, restorative specialists, dental students, and oral hygienists/therapists.

Birkhäuser

La collection « 24 jours pour préparer son entrée en 2e année de prépa » vous assure des révisions solides entre la Sup et la Spé grâce au planning de travail fourni par les auteurs expérimentés. Ce planning est fondé sur 24 séances de travail permettant de balayer le programme de Sup. Durant

chaque séance, vous vous exercez sur un sujet puis vous vous consacrez à une analyse minutieuse de tout l'ensemble du corrigé (analyse de l'énoncé, corrigé détaillé, techniques à mémoriser, formulaire et nombreux extraits des rapports de jurys). Cette collection vous permet donc, dès la fin de la Sup, de vous préparer efficacement aux concours d'entrée dans les Grandes Écoles.

This book focuses on homological aspects of equivariant modules. It presents a new homological approximation theory in the category of equivariant modules, unifying the Cohen-Macaulay approximations in commutative ring theory and Ringel's theory of delta-good approximations for quasi-hereditary algebras and reductive groups. It also provides detailed introduction to homological algebra, commutative ring theory and homological theory of comodules of co-algebras over an arbitrary base. The book is primarily aimed at researchers but will also be suitable for graduate students.
