Atlas presenting the results of aerial surveys undertaken to determine the principal wintering areas used by nearctic shorebirds on the coast of South America. The surveys, carried out in January/February from 1982-1986, covered 28,000 km of the South American coastline and included nearly all parts of the coast

thought to contain significant habitat for shorebirds. Volume 1 contains an introduction, methods, an overview summarising the distribution of shorebirds on the coast on a continental level, discusses the shorebird distribution in relation to geomorphology and environmental conditions and reviews the need for international cooperation in the conservation of shorebirds, citing the Western Hemisphere Shorebird Reserve Network as an example of a major conservation initiative that has arisen from internationally coordinated distributional studies. Volume 2 gives detailed information on shorebird distribution

country by country.  
Data for each survey

Quito, mégapole bourgeoise au parfum colonial s'éveille aux rayons du soleil équatorial, au-dessous des cimes des volcans.

Les centres d'affaires des quartiers hérissés de buildings à l'architecture futuriste, se mêlent aux zones résidentielles sagement arborées, alors que les quartiers populaires se caractérisent par une activité grouillante, concentrée autour de bâtisses de style colonial. Ceinturée par les montagnes, Quito, n'est pas sans évoquer une forteresse abritant 1.400.000 habitants...
