Le cap des Trois Fourches est un excellent 'candidat' à être érigé en Aire Protégée Marine (APM) en raison de sa grande qualité écologique, attestée par la présence de nombreuses espèces bio-indicatrices, par la diversité élevée d'espèces, aussi bien les espèces protégées que les espèces d'intérêt commercial, ainsi que par la diversité des habitats (prairies, grottes, substrat rocheux, etc.). La présente brochure est un document qui rassemble toute l'information disponible sur les valeurs biologiques et écologiques ainsi que socio-économiques et culturelles du cap des Trois Fourches. Il se veut être également un outil de communication qui ambitionne la sensibilisation des acteurs locaux sur l'importance des aires protégées marines.

He goes on to tell the story of his advisory missions to Asia, the Middle East, Latin America, Africa, and the South Pacific. Higgins weaves anecdotal accounts of his adventures in these regions, and gives his personal reactions to these environments along with analysis of the development efforts in which he participated. He explains how professional thinking about economic and social development evolved as experience and knowledge accumulated. The book also includes accounts of the author's experiences with, and reactions

to, a variety of multicultural and bilateral aid agencies, thus providing an intimate picture of their operation. In his final chapter Higgins sums up his own views on the current state of economic development, development economics, economics in general, and the role of political and cultural factors in the development process.

Echocardiographic diagnosis is based on moving images. Recent advances in ultrasound systems have brought innovative applications into the clinical field and can be integrated into powerful multimedia presentations for teaching. The CD-ROM accompanying the book presents morphological pictures from tomographic sections of the whole fetal body, combined with high quality dynamic echocardiographic images of normal fetuses and of some of the most common congenital heart defects.

The Orientation of Hieroglyphs. Part 1, Reversals Springer

No field of study is livelier than the history of Roman-era Judaea (ca. 200 BC to AD 400). Bold reinterpretations of texts and new archaeological discoveries prompt us constantly to rethink assumptions. What kind of religion was Judaism? How did Jews--and Christians--relate to Roman imperial power? Should we speak of Judaism or Judaisms? How should the finds at Qumran affect our understanding? Did Paul and other early Christians remain within Judaism? Should we translate Ioudaioi as "Jews" or "Judaeans"? These debates can leave students perplexed, this book argues, because the participants share only a

topic. They are actually investigating different questions using disparate criteria. In the hope of facilitating communication and preparing advanced students, this book explores two basic but neglected problems: What does it mean to do history (if history is what we wish to do)? And how did the ancients understand and describe their world? It is not a history, then, but an orientation to the history of Roman Judaea. Rather than trying to specify which questions are good ones or what one should think about them, the book offers new perspectives to help unleash the historical imagination while reckoning squarely with the nature of our evidence.

Handbook of Psychology and Sexual Orientation Presses Univ. du Mirail

The bibliography includes papers in all fields of photosynthesis research - from studies of model biochemical and biophysical systems of the photosynthesis mechanism to primary production studied by the so-called growth analysis. In addition to papers devoted entirely to photosynthesis, papers on other topics are included if they contain data on photosynthetic activity, photorespiration, chloroplast structure, chlorophyll and carotenoid synthesis and destruction, etc., or if they contain valuable methodological information (measurement of selected environmental factors, leaf area, etc.). In many branches it has been very difficult to define the limits of interest for photosynthesis researchers. This problem has arisen e. g. in topics dealing with the transport of gases, where - in addition to the papers on CO₂ transfer - some papers on water vapour transfer are included, these being of general application. On the other hand, many papers dealing with the anatomy and physiology of stomata have been

omitted, if the aspect of carbon dioxide or water vapour exchange has not been discussed. This volume contains references to papers published in the year 1977, and, similarly to Vol. 7, also addenda including references published in the preceding period (i. e. 1966 - 1976). The numbers of these additional references are labeled with an asterisk in the list of references.

107 In this way the absolute values of the structure factors may be found, not the phases (6. 8). The problem to find these phases is the phase problem. The present article will treat the following topics. At first the description of the ideal crystal will be given in Chap. B. The underlying principles of this description are the concepts of reciprocal lattice, FOURIER synthesis and symmetry. The evaluation of the intensity will then follow in Chap. C and D. Chap. E is concerned with the phase problem and related topics. Though this article treats the analysis of crystal structures, the fundamental concepts for other structures will here be found too. But these topics, and the experimental methods, will find their place elsewhere.

. B. Description of the crystalline state. I. Lattice theory. a) The direct lattice. 8. Introduction. In Sect. 3, a description of the ideal crystal was given: The space, occupied by a crystal, is divided into congruent parallelepipeds, each with the same orientation. This parallelepiped is defined by the three basic vectors, a,

band c, drawn from an origin 0 (Fig. 2), and is called the primitive cell. This cell is filled with atoms (or ions), and the same configuration of atoms is repeated in space. It has been aptly called a three-dimensional wallpaper, as on a wallpaper the same pattern is repeated again and again.

Nature Food & Agriculture Org. Information analysis centers were developed to help the scientist and practitioner cope with the ever increasing mass of published and unpublished information in a specific field. Their establishment resulted from a further extension of those pressures that had brought about the formation of the specialized primary journal and the abstracting services at the turn of the century. The information analysis center concept was greatly advanced by the 1963 report of the President's Science Advisory Committee Panel on Science Information. This report stated: ". . . scientific interpreters who can collect relevant data, review a field, and distill information in a manner that goes to the heart of a technical situation are more help to the overburdened specialist than is a mere pile of relevant documents." Such specialized information centers are operated in closest possible contact with working scientists in the field. These centers not only furnish information about ongoing research and disseminate and retrieve information but also create new information and develop new methods of information analysis, synthesis, and dissemination. The continually expanding biomedical literature produced by scientists from the world's laboratories, research centers, and medical centers led the National Institute of Neurological Diseases and Stroke in 1964 to initiate a National Neurological Information

Network of specialized centers for neurological information. The Centers are designed to bring under control and to promote ready access to important segments of the literature.

In the United States, some populations suffer from far greater disparities in health than others. Those disparities are caused not only by fundamental differences in health status across segments of the population, but also because of inequities in factors that impact health status, so-called determinants of health. Only part of an individual's health status depends on his or her behavior and choice; community-wide problems like poverty, unemployment, poor education, inadequate housing, poor public transportation, interpersonal violence, and decaying neighborhoods also contribute to health inequities, as well as the historic and ongoing interplay of structures, policies, and norms that shape lives. When these factors are not optimal in a community, it does not mean they are intractable: such inequities can be mitigated by social policies that can shape health in powerful ways. *Communities in Action: Pathways to Health Equity* seeks to delineate the causes of and the solutions to health inequities in the United States. This report focuses on what communities can do to promote health equity, what actions are needed by the many and varied stakeholders that are part of communities or support them, as well as the root causes and structural barriers that need to be overcome.

CHOICE Highly Recommended, Sept

2022 Oceanography and Marine Biology: An Annual Review remains one of the most cited sources in marine science and oceanography. The ever-increasing interest in work in oceanography and marine biology and its relevance to global environmental issues, especially global climate change and its impacts, creates a demand for authoritative refereed reviews summarizing and synthesizing the results of recent research. For nearly 60 years, OMBAR has been an essential reference for research workers and students in all fields of marine science. This volume considers such diverse topics as the Great Barrier Reef Expedition of 1928-29, Mediterranean marine caves, macromedusae in eastern boundary currents, marine biodiversity in Korea, and development of a geo-ecological carbonate reef system model to predict responses of reefs to climate change. Volume 59 is available to read Open Access on the Taylor & Francis eBooks site (<https://www.taylorfrancis.com/books//10.1201/9781003138846>) An international Editorial Board ensures global relevance and expert peer review, with editors from Australia, Canada, Hong Kong, Ireland, Singapore and the United Kingdom. The series volumes find a place in the libraries of not only marine laboratories and oceanographic institutes, but also universities worldwide. If you are interested in submitting a review for consideration for publication in OMBAR, please email the Editor in Chief, Stephen Hawkins, at S.J.Hawkins@soton.ac.uk. Human Immunodeficiency Virus Reverse Transcriptase Taylor & Francis

Makis Solomos explores the ecologies of music and sound, inspired by Felix Guattari, for whom environmental destruction caused by capitalism goes hand in hand with deteriorating ways of living and feeling, and for whom an ecosophical stance, combining various ecological registers, offers a glimpse of emancipation, a position strengthened today by intersectional approaches. Solomos explores environmental, mental and social ecologies through the lens of the history of music and current artivisms - especially in the fields of acoustic ecology, contemporary music and sound art. Several theoretical and analytical debates are put forward, including a theory of sound milieus and the biopolitics of sound; the relationships between music and the living world; soundscape compositions, field recording, ecomusicology, and the creation of sound biotopes; the use of sound and music to violent ends as well as considering the social and political functions of music and the autonomy of art, sonic ecofeminism, degrowth in music, and much more.

[Les Centres colorés dans les cristaux ioniques](#) Presses Université Laval

The Reverse Transcriptase (RT) of Human Immunodeficiency Virus Type 1 (HIV-1) arguably ranks amongst one of the most extensively studied retroviral enzymes. Heterologous expression and purification of HIV-1 RT in the early eighties, approval of the first nucleoside analogue RT inhibitor (NRTI) in 1987, discovery of resistance to RT inhibitors, approval of the first non-nucleoside analogue RT inhibitor (NNRTI) in 1996 and the various crystal structures of RT with and without bound substrate(s)

and/or inhibitors represent only a few of the important milestones that describe the a bench-to-bedside success in the continuing effort to combat HIV-1 infection and its consequences. Nucleoside and nonnucleoside RT inhibitors remain important components in frequently used drug regimens to treat the infection. RT inhibitors also play important roles in recently validated strategies to prevent transmission of the virus. The relevance of HIV-1 RT as a drug target has simultaneously triggered interest in basic research studies aimed at providing a more detailed understanding of interactions between proteins, nucleic acids, and small molecule ligands in general terms. In light of the ever-growing knowledge on structure and function of HIV-1 RT, this enzyme serves as a valuable "model system" in efforts to develop novel experimental tools and to explain biochemical processes. This monograph is designed to provide an overview of important aspects in past and current HIV-1 RT research, with focus on mechanistic aspects and translation of knowledge into drug discovery and development. The first section includes chapters with emphasis placed on the coordination of the RT-associated DNA polymerase and ribonuclease H (RNase H) activities. The second covers mechanisms of action and future perspectives associated with NRTIs and NNRTIs, while the third section includes chapters focusing on novel strategies to target the RT enzyme. Chapters of the final part are intended to discuss mechanisms involved in HIV variability and the development of drug resistance. We hope that these contributions will stimulate interest, and encourage research aimed at the development of novel RT inhibitors. The lack of bona fide

RNase H inhibitors with potent antiviral activity provides an example for challenges and opportunities in the field.

Orientation to the History of Roman Judaea Editions TECHNIP

This book examines campus climate data collected from undergraduates at several large, public research universities across the nation to enhance understanding of the long-term impact of campus climate on student success. Many universities have refocused their attention and energy on campus climate, defined in this volume as students' perceptions of how welcoming and respectful their campus environments are for students from different social identities. As structural diversity continues to grow more complex on college campuses around the nation, campus leaders have begun to take more steps to understand campus climate and address persistent inequalities, acts of discrimination, and violence against students from diverse backgrounds. The authors in this volume address initiatives to improve campus climate and provide empirical evidence on the effectiveness of those programs.

America's Unknown War Walter de Gruyter GmbH & Co KG

The book describes and explains thermally stimulated current depolarization and thermal sampling. Electrical charges are created in the dielectric material by a voltage field. Analyzing how the current discharges provides insights into the atomic structure of the polymer, its organization and free volume. The book also includes case studies teaching how to apply the characterization techniques to understand the behavior of polymers.

All the Difference Frontiers Media SA
"This book provides important information to mental health clinicians

about doing treatment with sexual and gender minorities, but following evidenced-based care. Evidenced-based practice is important because in mental health treatment, it is important for therapy to actually work. This book provides practical up-to-date information about adapting and using evidenced based treatments for sexual and gender minority clients"--

Colloques internationaux du Centre national de la recherche scientifique

Wipf and Stock Publishers

The first authoritative summary of its kind in this area, the Handbook of Psychology and Sexual Orientation is the

primary resource for the many researchers, including a new generation of investigators, who are continuing to advance understanding in this field. The volume editors along with other leading experts, contribute an extraordinary review of contemporary psychological research and theory on sexual orientation in their specific fields of work.
