Through its exploration of the spatial dimension of risk, this book offers a brand new approach to theorizing risk, and significant improvements in how to manage, tolerate and take risks. A broad range of risks are examined, including natural hazards, climate change, political violence, and state failure. Case studies range from the Congo to Central Asia, from tsunami in Japan and civil war affected areas in Sri Lanka to avalanche hazards in Austria. In each of these cases, the authors examine the importance and role of space in the causes and differentiation of risk, in how we can conceptualize risk from a spatial perspective and in the relevance of space and locality for risk governance. This new approach – endorsed by Ragnar Löfstedt and Ortwin Renn, two of the world's leading and most prolific risk analysts – is essential reading for those charged with studying, anticipating and managing risks.

This book is open access under a CC BY 4.0 license. This book defines the new field of "Bioeconomy" as the sustainable and innovative use of biomass and biological knowledge to provide food, feed, industrial products, bioenergy and ecological services. The chapters highlight the importance of bioeconomy-related concepts in public, scientific, and political discourse. Using an interdisciplinary approach, the authors outline the dimensions of the bioeconomy as a means of achieving sustainability. The authors are ideally situated to elaborate on the diverse aspects of the bioeconomy. They have acquired in-depth experience of interdisciplinary research through the

university's focus on "Bioeconomy", its contribution to the Bioeconomy Research Program of the federal state of Baden-Württemberg, and its participation in the German Bioeconomy Council. With the number of bioeconomy-related projects at European universities rising, this book will provide graduate students and researchers with background information on the bioeconomy. It will familiarize scientific readers with bioeconomy-related terms and give scientific background for economists, agronomists and natural scientists alike.

Much has been written on the traditions of elite gardens but little attention has been directed to the gardens of more humble and popular cultures that reflect regional, localized, ethnic, personal, or folk creations. These articles reflect growing interest in a range of cultural artifacts that demonstrate how culture influences surroundings.

The Book of Trees NorthSouth Books

Why are trees so important? How many types are there? How do they benefit the environment and wildlife? This book, by the award-winning author Piotr Socha, answers these questions and more, tracking the history of trees from the time of the dinosaurs to the current day.

Slanted Truths Springer

From this book's first chapter: "To be able to float free, with gravity exerting no impact. To live in Neverland. To be idolized-to be loved-by millions around the world. "These seem completely unreasonable dreams. But from a boy from Gary, Indiana, who was special from the first, they became more than dreams. They became fundamental needs. And they were achieved during a lifetime that was stunning in its highs and lows, and that was, ultimately, far, far too short. "Far too short and, more sadly still, perhaps poised for a triumphant next chapter. We will never know." While that is true-we will never know-we can revisit and celebrate that extraordinary life, and we do so in words and pictures in this special commemorative book. Although Michael Jackson lived just 50 years, he spent the great majority of that time in the public eye. We loved his as a boy, radiating joy and dancing up a storm in the Jackson 5, his falsetto tenor pouring forth from car radios coast to coast. We were subsequently thrilled by his reinvention as the biggest pop star on the planet, with "Billie Jean" and "Beat It" blasting from boom boxes around the world. The best pictures from each era are here. As you would expect, LIFE magazine, then the country's preeminent photo journal, was onto the Jackson 5 story early-in fact, we put the family on our cover when Michael was still a lad. He made the cover several more times, and he allowed LIFE exclusive access to his private California sanctum called Neverland. We have combed through our archives and found all the famous shots as well as several surprises, including never-before-seen pictures that show the boy and then the man in an unguarded, personal way. Also, we have taken the best from the portfolios of the world's top rock 'n' roll photographers and created, we think, a complete picture of this endlessly compelling entertainer. Michael Jackson was, like Sinatra, Elvis, the Beatles and few others, a celebrity who not only made us smile but changed the culture-who altered the way that we looked and behaved. In this book, we relive his thrilling life and times, which were our time too.

Winner of the National Press Club's Arthur Rowse Award for Press Criticism! From Craig Silverman, proprietor of www.RegretTheError.com, comes a lively journey through the history of media mistakes via a chronicle of funny, shocking, and often disturbing journalistic slip-ups. The errors--running the gamut from hilarious to tragic--include "Fuzzy Numbers" (when numbers and math undermine reporting) "Obiticide" (printing the obituary of a living person), and "Unintended Consequences" (typos and misidentifications that create a new, incorrect reality). While some of the

errors are laugh-out-loud funny, the book also offers a serious investigation of contemporary journalism's lack of accountability to the public, and a rousing call to arms for all news organizations to mend their ways and reclaim the role of the press as honest voice of the people.
