 Dev

Virtual exchange refers to education
 programmes in which constructive
 communication and interaction takes
 place between individuals or groups from
 different cultural backgrounds with the
 support of educators or facilitators.
 Evaluating and Upscaling Telecollaborative
 Teacher Education (EVALUATE,
<http://www.evaluateproject.eu/>) was a
 European policy experimentation financed
 by Erasmus+ which studied the impact of
 a telecollaborative model of virtual
 exchange on student teachers. Between
 2017-2018, the project consortium trained
 teacher trainers and organised virtual

exchanges which involved over 1,000
 student teachers at initial teacher
 education institutions. This entailed
 students interacting and collaborating with
 partner classes from other countries as an
 integral part of one of their courses. The
 research team then analysed the learning
 gains from these exchanges using
 qualitative and quantitative research
 methodologies. They also worked with
 representatives from European ministries
 of education to understand how virtual
 exchange could be upscaled in teacher
 education across Europe. This publication
 presents the findings of the EVALUATE
 experimentation and its implications for
 the education of future teachers. The
 study found that engaging student
 teachers in structured online intercultural
 collaboration as part of their formal
 learning can contribute to the
 development of their digital-pedagogical,

intercultural, and foreign language
 competences. It can also lead to
 innovation and international learning in
 the education of future teachers.

 Research on talent development and
 gifted education has made enormous
 strides over the past decades. Yet, much
 of the actual talent development and
 gifted education work being done fails to
 live up to the field's promise. This book
 highlights recent theoretical approaches

and discusses empirical research conclusions which have yet to receive the attention they deserve. It also considers possibilities for harnessing these insights for current talent development and gifted education efforts. (Series: Talent Encouragement - Development of Expertise - Performance Excellence - Vol. 11)

Resilienzförderung bei Kindern unter drei Jahren OECD Publishing

A Theory of Feelings examines the problem of human feelings, widely understood, from phenomenological, analytical, and historical perspectives. It begins with an analysis of drives and affects, and pursues the nature of 'feeling' itself, in all of its variability, through a close study of the distinctive categories of the emotions, emotional dispositions, orientive feelings, and the passions. The book will be of interest to anyone interested in philosophy, psychology, sociology, and cognitive science.

Education at a Glance 2021 OECD

Indicators *Resilienzförderung bei Kindern unter drei Jahren*

This book is about international knowledge transfer in religious education as an academic discipline; at the same time, though, it is related to the school subject of RE. Its aim is to strengthen the awareness of the need for international cooperation in the field of religious education in general and especially for clarifying the role of knowledge in this kind of cooperation. The contributions discuss a number of issues, among others related to the validity and transferability of knowledge in religious education. Thus, the book takes up a topic which so far has remained implicit and therefore also untreated. This approach implies a whole spectrum of new methodological and epistemological problems. Some crucial questions that are discussed in the chapters from different national contexts are: - How can the national and the international context be productively connected to each other? - Which concept or understanding of ›international‹ should be used when it comes to the transfer of knowledge? - What exactly is meant by ›knowledge‹ in religious education? - What does ›transfer‹ mean in this context? The scope of the book is an invitation to other colleagues to take part in and to continue the discussion.

BNE in der Kita Trentham Books Limited
This book provides an illuminating account of teachers' own reflections on their experiences of teaching in urban schools. It was conceived as a direct response to policy-related and media-generated concerns about male teacher shortage and

offers a critique of the call for more male role models in elementary schools to address important issues regarding gender, race and the politics of representation. By including the perspectives of minority teachers and students, and by drawing on feminist, queer and anti-racist frameworks, this book rejects the familiar tendency to resort to role modelling as a basis for explaining or addressing boys' disaffection with schooling. Indeed, the authors argue, on the basis of their research in urban schools in Canada and Australia, that educational policy concerned with male teacher shortage and the plight of disadvantaged minority boys would benefit from engaging with analytic perspectives and empirical literature that takes readers beyond hegemonic discourses of role modelling. A compelling case is presented for the need to disarticulate discourses about role modelling from a politics of representation that is committed to addressing the reality of the impact of racial and structural inequalities on both minority teachers and students' participation in the education system. The book also provides insight into the persistence of gender inequality as it relates to the status of elementary school teaching as women's work.

Talent Development and Excellence

Harvard University Press

Do you know your own feelings?

Sometimes, we're happy, so we laugh and shout with glee. Other times, we're angry, and want to rage and roar. It is not easy to deal with our many contradictory emotions. To recognize our own feelings and deal with them responsibly is an important learning process for children, and a trial of limits. This vibrantly and expressively illustrated book invites children to talk about feelings. It takes readers through a range of potential emotions without ever calling them "good" or "bad," allowing children to recognize and examine their own emotional world. *Challenges and Opportunities in Health Care Management* Verso

This book presents early childhood students and staff with a broad and diverse range of teaching techniques to support children's learning. It examines 26 techniques ranging from simple ones, such as describing and listening, to more complex methods, such as deconstruction and scaffolding. The strategies selected are derived from the best current research knowledge about how young children learn. A detailed evaluation of each strategy enables childcare staff, early childhood teachers and students to expand their repertoire of teaching

strategies and to critically evaluate their own teaching in early childhood settings. Vignettes and examples show how early childhood staff use the techniques to support children's learning and help to bring the discussion of each technique to life. Revised and updated in light of the latest research, new features include: * Coverage of the phonics debate * Addition of ICT content * Questions for further discussion * Revision to the chapter on problem solving * Updated referencing throughout Teaching Young Children is key reading for students and experienced early childhood staff working in diverse settings with young children.

Philosophy of Education OECD Publishing
Examines the failure of liberalism during the threatened collapse of financial systems in the 2009 worldwide recession, during which large amounts of cash were distributed to save financial institutions without regard for other liberal objectives.

Wolfgang Tillmans Routledge

School buildings have a crucial contribution to make to raising educational achievement. Designing high performance school buildings for the 21st century for all children is a shared concern amongst OECD countries. Innovative research seeks architectural answers that make efficient use of the resources invested in building, renovating and running schools. Changes in the design of those buildings must serve the educational process and improve the quality of the learning environment. A major challenge is to secure the best possible design input to deliver schools that will meet future needs and expectations and offer a positive environment that supports learning and teaching.

Evaluating the impact of virtual exchange on initial teacher education: a European policy experiment Lexington Books

Containing a selection of texts on education prepared during the work of the International Commission on Education for the Twenty-first Century, this volume bears witness to some paradoxes faced by education: to reconcile divergent aims and trends, to embody both continuity and renewal, to encourage conformity and innovation. These papers are intended to complement existing literature to respond to questions that arose in the course of the Commission's work, and to illuminate specific issues that cross disciplines. *From Child Welfare to Child Well-Being*

McGraw-Hill Europe

The scholarly contributors to this volume investigate various means to stimulate and facilitate reflection on new social relations while clarifying the contradictions between religious and social affiliation

from different perspectives and experiences. They explore hindrances whose removal could enable Muslim children and youth to pursue equal participation in political and social life, and the ways that education could facilitate this process.

My Feelings and Me Prentice Hall

This contributed volume draws a vital picture of the health care sector, which, like no other is affected by technology push and stakeholder pull. Innovative product and service solutions emerge, which have to integrate different stakeholders' interests. This book studies current challenges in health care management from different perspectives. Research articles analyze the situation in the health care sector and present solutions in the following areas: the health care system; hospitals; teams in health care; patients' perspectives; assessment of technologies and innovations; and toolkits for organizing health care. All these contributions summarize pressing hot topics in the health care sector, analyze their future potential, and derive managerial implications. Outstanding best practices throughout Europe are presented in the case study section of the book. Consequently, the book closes the gap between science and practical application by addressing not only readers from academia but also practitioners working in the health care industry.

Jorge Ishizawa Springer-Verlag

This book addresses central questions regarding parental involvement across European educational systems; exploring the commonalities and differences across European countries and the extent to which current policy and practice pertaining to parental involvement is inclusive of diversity. Adopting an interdisciplinary approach that draws from the fields of education, sociology and psychology, it presents a description of the policy context and empirical research on critical perspectives relating to parental involvement. Comprising a rich varied cross-section of national experiences from eleven European countries and the contexts surrounding them, case studies provide insights into parental involvement across Europe and identify challenges in the field. This volume's in-depth approach and comprehensive interrogation of parental involvement across European education systems make it an ideal resource for parents, teachers and academics, researchers and post-graduate

students in the fields of education policy and comparative education, as well as teacher educators and policy makers.

Bildung für Nachhaltige Entwicklung (BNE) ist in aller Munde. Doch, was ist BNE eigentlich und wie lässt sie sich konkret in der Kita umsetzen? Michael Brodowski, Professor des Masterstudiengangs für Netzwerkmanagement Bildung für eine Nachhaltige Entwicklung an der Alice-Salomon-Hochschule in Berlin, ordnet als Herausgeber dieses Werkes, das für die Kita-Praxis oftmals diffus erscheinende Feld der BNE. Neben einer umfassenden theoretischen Einordnung werden konkrete praktische Beispiele und Modelle aus und für Kitas dargestellt.

EMOOCs 2021 Verlag Herder GmbH

Contains economic experiments designed for students who have not taken any economics. This book supplements any microeconomics text, is used by itself to teach principles. It includes features such as: a chapter on public goods; a chapter on network externalities; concepts of economic principles; problems and tie-ins to economics; and more.

Japanese Sports Waxmann Verlag

Carey begins by characterizing the innate starting point for conceptual development, namely systems of core cognition. Representations of core cognition are the output of dedicated input analyzers, as with perceptual representations, but these core representations differ from perceptual representations in having more abstract contents and richer functional roles. Carey argues that the key to understanding cognitive development lies in recognizing conceptual discontinuities in which new representational systems emerge that have more expressive power than core cognition and are also incommensurate with core cognition and other earlier representational systems. Finally, Carey fleshes out Quinian bootstrapping, a learning mechanism that has been repeatedly sketched in the literature on the history and philosophy of science. She demonstrates that Quinian bootstrapping is a major mechanism in the construction of new representational resources over the course of children's

cognitive development.

Gender, Race, and the Politics of Role Modelling LIT Verlag Münster

This collection contains twenty-one thought-provoking essays on the controversies surrounding the moral and legal distinctions between euthanasia and "letting die." Since public awareness of this issue has increased this second edition includes nine entirely new essays which bring the treatment of the subject up-to-date. The urgency of this issue can be gauged in recent developments such as the legalization of physician-assisted suicide in the Netherlands, "how-to" manuals topping the bestseller charts in the United States, and the many headlines devoted to Dr. Jack Kevorkian, who has assisted dozens of patients to die. The essays address the range of questions involved in this issue pertaining especially to the fields of medical ethics, public policymaking, and social philosophy. The discussions consider the decisions facing medical and public policymakers, how those decisions will affect the elderly and terminally ill, and the medical and legal ramifications for patients in a permanently vegetative state, as well as issues of parent/infant rights. The book is divided into two sections. The first, "Euthanasia and the Termination of Life-Prolonging Treatment" includes an examination of the 1976 Karen Quinlan Supreme Court decision and selections from the 1990 Supreme Court decision in the case of Nancy Cruzan. Featured are articles by law professor George Fletcher and philosophers Michael Tooley, James Rachels, and Bonnie Steinbock, with new articles by Rachels, and Thomas Sullivan. The second section, "Philosophical Considerations," probes more deeply into the theoretical issues raised by the killing/letting die controversy, illustrating exceptionally well the dispute between two rival theories of ethics, consequentialism and deontology. It also includes a corpus of the standard thought on the debate by Jonathan Bennet, Daniel Dinello, Jeffrie Murphy, John Harris, Philipa Foot, Richard Trammell, and N. Ann Davis, and adds articles new to this edition by Bennett, Foot, Warren Quinn, Jeff McMahan, and Judith Lichtenberg.
